(*)Presentación

The School of Telecommunication Engineering (EET) is a higher education school of the University of Vigo that offers Bachelor's degrees, Master's degrees and Doctoral programs in the fields of Telecommunications Engineering.

Bachelor s Degree in Telecommunication Technologies Engineering (EUR-ACE®).

The mail goal of the Bachelor Degree in Telecommunication Technologies Engineering is to form professionals at the forefront of technological knowledge and professional competences in telecommunication engineering. This Bachelor has been recognized with the best quality seals, like the EUR-ACE S. It has a bilingual option: up to 80% of the degree credits can be taken in English.

http://teleco.uvigo.es/images/stories/documentos/gett/degree_telecom.pdf

www: http://teleco.uvigo.es/index.php/es/estudios/gett

Master in Telecommunication Engineering

The Master in Telecommunication Engineering is a Master's degree that qualifies to exercise the profession of Telecommunication Engineer, in virtue of the established in the Order CIN/355/2009 of 9 of February.

http://teleco.uvigo.es/images/stories/documentos/met/master telecom rev.pdf

www: http://teleco.uvigo.es/index.php/es/estudios/mit

Interuniversity Masters

The current academic offer includes interuniversity master s degrees that are closely related to the business sector:

Master in Cybersecurity: www: https://www.munics.es/

Master in Industrial Mathematics: www: http://m2i.es

International Master in Computer Vision: www: https://www.imcv.eu/

(*)Equipo directivo

MANAGEMENT TEAM

Directora: Rebeca Pilar Díaz Redondo (teleco.direccion@uvigo.gal)

Secretaría e Subdirección de Novas Titulacións: Pedro Rodríguez Hernández

(teleco.subdir.secretaria@uvigo.gal; teleco.subdir.novastitulacions@uvigo.gal)

Subdirección de Organización Académica: Pedro Comesaña Alfaro (teleco.subdir.academica@uvigo.gal)

Subdirección de Relaciones Internacionais e Subdirección de Infraestructuras: María Verónica Santalla del

Río (teleco.subdir.internacional@uvigo.gal; teleco.subdir.infraestructuras@uvigo.gal)

Subdirección Difusión e Captación: Laura Docio Fernández (teleco.subdir.captacion@uvigo.gal)

Subdirección de Calidade: Ana María Cao Paz(teleco.subdir.calidade@uvigo.gal)

BACHELOR SDEGREE IN TELECOMMUNICATION TECHNOLOGIES ENGINEERING

Generalcoordinator: Lucía Costas Pérez (teleco.grao@uvigo.gal)

https://teleco.uvigo.es/es/documentos/acordos-es/comisions-academicas-es/miembros-de-la-comision-academica-del-gett/

MASTER IN TELECOMMUNICATION ENGINEERING

Generalcoordinator: Manuel García Sánchez (teleco.master@uvigo.gal)

https://teleco.uvigo.es/es/documentos/acordos-es/comisions-academicas-es/miembros-de-la-comision-academica-del-met/

MASTER INCYBERSECURITY

General coordinator:Ana Fernández Vilas (teleco.munics@uvigo.gal)

https://teleco.uvigo.es/es/documentos/acordos-es/comisions-academicas-es/miembros-de-la-comision-academica-del-munics/

MASTER ININDUSTRIAL MATHEMATICS

Generalcoordinator: Elena Vázquez Cendón (USC)

UVigo coordinator: José Durany Castrillo (durany@dma.uvigo.es)

http://www.m2i.es/?seccion=coordinacion

INTERNATIONALMASTER IN COMPUTER VISION

General coordinator: Xose Manuel Pardo López (USC)

UVigo coordinator:José Luis Alba Castro (jalba@gts.uvigo.es)

https://www.imcv.eu/legal-notice/

MASTER'S DEGREE IN QUANTUM INFORMATION SCIENCE AND TECHNOLOGIES (MQIST)

General coordinator: Javier Mas (USC)

Coordinador UVIGO: Manuel Fernández Veiga(teleco.mqist@uvigo.es)

General	The aim of this course is to become familiar with the fundamen			
description	representation, the description of visual content through local fe	eatures of colou	ur, shape and te	xture, and the practical
	application of these			
	concepts to problems of image processing and analysis.			

Code

- A1 CB6 Possess and understand knowledge that provides a basis or opportunity to be original in the development and/or application of ideas, often in a research context
- A2 CB7 Students should be able to apply their acquired knowledge and problem-solving skills in new or unfamiliar environments within broader (or multidisciplinary) contexts related to their area of study
- B1 Capacity for analysis and synthesis of knowledge
- B3 Ability to develop computer vision systems depending on the existent needs and apply the most suitable technological tools
- C1 To know and apply the concepts, methodologies and technologies of image processing
- D1 To practice the profession with a clear awareness of its human, economic, legal and ethical dimensions and with a clear commitment to quality and continuous improvement
- D2 Capacity for teamwork, organization and planning

Expected results from this subject

^{*}The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies	
	Description
Lecturing	Participatory lessons with the aim of learning the theoretical content of the subject
Case studies	Elaboration and presentation of selected state-of-the-art methodologies related to the subject
Laboratory practical	Analysis and resolution of practical cases with the aim of strengthening the practical application of the theoretical content. Practice in computer classrooms, learning based on the resolution of practical cases, autonomous work and independent study of the students, and group work and cooperative learning.
Project based learning	Learning based on the resolution of practical cases, autonomous work and independent study of the students, and group work and cooperative learning.

Personalized assistance	
Methodologies	Description
Case studies	Individualized advice during case studies
Laboratory practical	Resolution of doubts during laboratory practices
Project based learning	Individualized advice during research projects

Assessment

Code

- A1 CB6 Possess and understand knowledge that provides a basis or opportunity to be original in the development and/or application of ideas, often in a research context
- A2 CB7 Students should be able to apply their acquired knowledge and problem-solving skills in new or unfamiliar environments within broader (or multidisciplinary) contexts related to their area of study
- A5 CB10 Students should possess the learning skills to enable them to continue studying in a largely self-directed or autonomous manner.
- B1 Capacity for analysis and synthesis of knowledge
- B3 Ability to develop computer vision systems depending on the existent needs and apply the most suitable technological tools
- B5 Ability to identify unsolved problems and provide innovative solutions
- B6 Ability to identify theoretical results or new technologies with innovative potential and turn them into products and services useful to society
- C2 To know and apply automatic learning and pattern recognition techniques applied to computer vision
- To practice the profession with a clear awareness of its human, economic, legal and ethical dimensions and with a clear commitment to quality and continuous improvement
- D2 Capacity for teamwork, organization and planning

Methodologies	
	Description
Laboratory practical	Analysis and resolution of practical cases with the objective of reinforce the practical application of the theoretical contents. Practices in computing labs, learning based in the resolution of practical cases, autonomous work and independent study of the students, and work in group and cooperative learning.
Case studies	Elaboration and presentation of works on selected and related state of the art methodologies.
Project based learning	Learning based on the resolution of practical cases, autonomous work and independent study of the students, and group work and cooperative learning.
Lecturing	Participatory lessons aimed at learning the theoretical contents of the subject

Personalized assistance	
Methodologies	Description
Laboratory practical	Resolution of doubts during laboratory practices.
Case studies	Individualized advice during the case study.
Project based learning	Individualized advice during the realization of the projects

^{*}The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies	
	Description
Lecturing	It will consisst of the collaborative discussion of contents of the course of way.
	This includes discussion and solving problems and practical case studies in the classroom.
Practices through ICT	Methodology oriented to solving cases of study related with the thematic of the course using software of reference.
	Practices and exercises focused on the implementation of the algorithms explained in the participatory classes.
	Specific hardware will be used in the laboratory in sessions of mandatory face-toface attendance
Mentored work	Taking into account proposed practical case studies, this method is oriented to solving and documenting a complete photogrammetric project, including the definition of: image acquisition methodologies in the field, supporting data collection for model georeferencing and the main photogrammetric products obtained through the photogrammetric process.
Seminars	The description of a concrete practical case related with the professional practice of photogrammetry.

Personalized assistance			
Methodologies	Description		

Lecturing	For all the modalities of teaching, tutorial session meetings could be held by telematic means (email, videoconference, forums in FAITIC,) Under the modality of previous agreement.
Practices through ICT In the mandatory lab sessions there will be a continuous assesment of the student performance. all the modalities of teaching, tutorial session meetings could be held by telematic means (email videoconference, forums in FAITIC,) Under the modality of previous agreement.	
Mentored work	For all the modalities of teaching, tutorial session meetings could be held by telematic means (email, videoconference, forums in FAITIC,) Under the modality of previous agreement.

Assessment					
	Description	Qualification	Trair Learnii	ning ar	
Mentored work	The students will have to complete a case of study by means of the design of a methodology that include the steps seen in the course:		A4 (C1 [C3 C5	D2
	 Objectives, Requirements and Products analysis Definition of the image acquisition networks in the case study Image processing and analysis Obtaining key photogrammetric products 			C6 C9	
Objective questions exam	The students will have to answer individually a test with questions about the contents of the course.		A4 (A5 (C1 C3 C5 C6 C9	
Problem and/or exercise solving	The students will have to resolve of individual form and in small groups a group of cases and concrete practical exercises.		A1 (A4 (A5 (02

For more information about the tests dates and schedule please visit the webpage of the programm: https://www.imcv.eu/

General	Workshop for getting acquainted with machine	e vision cameras and ha	ardware, their co	nfiguration, fine tuning
description	and how to work with them in real time.			

Code

- A5 CB10 Students should possess the learning skills to enable them to continue studying in a largely self-directed or autonomous manner.
- B3 Ability to develop computer vision systems depending on the existent needs and apply the most suitable technological tools
- C6 To know and apply the fundamentals of image acquisition and machine vision systems

Expected results from this subject	
Expected results from this subject	Training and
	Learning Results
The students will learn how to efficiently program real time acquisition and processing of	f images proper of A5
machine vision applications.	В3
	C6

Contents	
Topic	
Real time programming for machine vision	
PC-frame-grabber communication	•
Memory management	
Structure and usage of a typical machine vision	
SDK	
Low-level programming for high speed industrial	
processes

Methodologies	
	Description
Workshops	Hands-on workshop working in pairs in the lab with a computer and machine vision hardware, using C and C++. On-site attendance is compulsory, except when any extraordinary circumstances may concur.

Personalized assistance		
Methodologies	Description	
Workshops	Direct access to the teacher during the work at the lab.	

Assessment					
	Description	Qualification		g and Resu	-
Systematic observation	The teacher will follow closely the performance and progress of the students during the workshop, with timely individual feedback.	100	A5 B	33	C6

This is an optional experimental subject that requires in situ attendance of the students at the lab. Attendance to each of the four in situ sessions is compulsory. The classes' schedule is published before the enrolment period. Make sure that you will be able to attend the four sessions at UVigo before you enrol in this subject. If you are working, make sure that you get a commitment in writing from your employers allowing you to attend the four scheduled sessions at UVigo before you enrol. Otherwise, DO NOT ENROL, choose another optional subject that does not require in situ attendance. Job commitments are not a recognised cause for leave of absence. Porto students please note: UPorto's general 25% leave of absence DOES NOT APPLY at Uvigo. The only recognised causes for leave of absence at UVigo are the usual force majeure causes: death, serious illness, law enforcement, and acts of God, and they must be officially sanctioned by UVigo's administrative services by means of suitable documentary proof. If a leave of absence is officially sanctioned by UVigo, the evaluation of the missed session will be arranged on a case-per-case basis with consideration of the particular circumstances of the case.

General description	This subject offers a general vision of the biometric ide delves into the most common ones: face, fingerprint a			image and video. It

Code

- A3 CB8 Students should be able to integrate knowledge and deal with the complexity of making judgements based on incomplete or limited information, including reflections on the social and ethical responsibilities associated with applying their knowledge and judgements
- Capacity for critical analysis and rigorous evaluation of technologies and methodology
- B7 Autonomous learning ability for specialization in one or more fields of study
- C2 To know and apply automatic learning and pattern recognition techniques applied to computer vision
- C4 To conceive, develop and evaluate complex computer vision systems
- D1 To practice the profession with a clear awareness of its human, economic, legal and ethical dimensions and with a clear commitment to quality and continuous improvement
- D4 Ability to understand the meaning and application of the gender perspective in the different areas of knowledge and in professional practice with the aim of achieving a more just and egalitarian society

Expected results from this subject	Training and Learning Results
The students will have comprised the common characteristics of the technicians of biometric	A3
identification, the evaluation metrics, the problems of practical implementation, the peculiarities of each	B4
biometric modality and the best way to combine them. Besides, they will have developed a critical	B7
analysis on the best working point for a concrete application, as well as an understanding of the	C2
peculiarities been due to demographic factors (sex, age, race, culture) in the design, development,	C4
evaluation and deployment of a solution of biometric identification.	D1
• •	D4

Contents	
Topic	
Basic principles of biometric identification	Identity versus biometric traits: Types of traits and biometric signatures. Variance intra-class and *nter-class of the biometric signatures. Influence of the sensors in the different signatures. Mathematical modelling of the biometric data: Extraction of characteristics. Compression. Representation versus Discrimination. Recognition, Identification, Verification and Authentication. Types of errors: TER, ERR, FAR, FRR.
Current biometric technologies	Physiological characteristics: fingerprints, iris, face, palm, retina, voice. Behavioural characteristics: signature (static and dynamic), keystrokes. Detection of alive sample. Pros and conts in the use of each biométric trait.
Facial recognition	Global technics (eigenfaces, fisherfaces) versus local technics (template matching, NCC, Elastic Bunch Graph Matching). The problem of the variation of illumination and pose. The problem of the detection and normalisation. Technicians of deep learning. Pros and cons.
Fingerprint recognition	Representation of minucias. Hausdorff distance. Gabor. filters. Tolerance to deformations. Types of sensors.

Iris recognition	Representation of the iris. Algorithm of Daugman. Algorithm of Wildes.		
	Recognition at a distance. Pros and cons of iris recognition.		
Multimodal recognition. Multibiometrics.	Combination of classifiers. Independent or correlated sources. Fusion of		
	classifiers: intramodal, intermodal, algorithmic and scores-based. State of		
	the art Systems using multimodal recognition and/or multibiometrics.

Methodologies	
	Description
Laboratory practical	Practices of the concepts showed in the masterclasses. They will be made with software accessible to all the students. Learning based in the resolution of practical cases and in small projects. The work will be in general autonomous and with independent study of the students. Some practices will be done in group and by means of cooperative learning. Intensive use of the virtual classroom will be implemented.
Lecturing	Participatory master classes where the contents are exposed and the pros and cons that different options would have to solve practical cases will be advanced, leaving some open questions so that the students work them and arrive to their own conclusions.

Personalized assistance				
Methodologies	Description			
Lecturing	During the master class the debate between the students will be forced and open questions will hang in the air.			
Laboratory practical	During the face-to-face part of the practices of laboratory there will be a personalized attention to solve doubts and to help in the advances. During the asynchronous part an extensive use of the Learning Management Systems and the forums of debate will be implemented

As prácticas acordaranse coas empresas e cos centros de investigación ofertantes (que xa asinen un convenio de colaboración), de tal maneira que se cumpra o requisito de que os proxectos nos que se integren axuden a completar a súa formación nalgunhas das materias obrigatorias ou *optativas cursadas e que lles permitan ter un contacto directo coa realidade do mercado

-Revisión da estado da arte;

-Análise de posibles solucións;

-Proposta / Desenvolvemento dunha solución;

-Análise crítica da solución proposta / desenvolvida;

Cada estudante terá un programa de traballo individual no campo dos docentes, definido polo tutor na institución anfitrioa e validado pola tutor académico. Os pasos principais poden incluír un subconxunto dos seguintes, de acordo coas necesidades específicas do proxecto.

Ao final, o/a estudante fará un informe escrito do traballo realizado.
