Universida_{de}Vigo

Educational guide 2017 / 2018

Presentation

The studies of Chemistry have a large tradition at the University of Vigo, where it has been taught during more than 30 years. The stablisment of the Universitary System of Galicia in the 90s and the current process of implantation of the European Space of Higher Education (EEES) modified the offer of degrees, but no the pioneering spirit of the chemists in research of in the quest for a better service to the society.

C3 Demonstrate knowledge and understanding of essential facts, concepts, principles and theories in: principles of quantum mechanics and its application in the description of the structure and properties of atoms and molecules

- C14 Demonstrate knowledge and understanding of essential facts, concepts, principles and theories: relationship between macroscopic properties and properties of individual atoms and molecules, including macromolecules
- C19 Apply knowledge and understanding to solve basic problems of quantitative and qualitative nature
- C20 Evaluate, interpret and synthesize data and chemical information
- C22 Process and perform computational calculations with chemical information and chemical data
- C23 Present oral and written scientific material and scientific arguments to a specialized audience
- D1 Communicate orally and in writing in at least one of the official languages of the University
- D3 Learn independently
- D4 Search and manage information from different sources
- D5 Use information and communication technologies and manage basic computer tools
- D6 Use mathematics, including error analysis, estimates of orders of magnitude, correct use of units and data representations
- D7 Apply theoretical knowledge in practice
- D8 Teamwork
- D9 Work independently
- D12 Plan and manage time properly

D13 Make decisions

- D14 Analyze and synthesize information and draw conclusions
- D15 Evaluate critically and constructively the environment and oneself

Learning outcomes			
Expected results from this subject	Training and Learning Results		
To describe in an unified way the electromagnetic field by means of Maxwell's laws. Apply the	C3	D1	
basic boundary conditions in the vacuum or in materials.		D12	
	_	D14	
To derive the equation of propagation of an electromagnetic wave, and describe its main	C3	D12	
characteristics. Relate this concept with the electromagnetic spectrum.		D14	
To explain the empirical phenomena related with the interaction of radiation with	C3	D12	
matter which cannot be explained by the Classical Theory, and the solutions proposed (wave-		D14	
corpuscle duality, quantization of the radiation).		D15	
To know the postulates of Quantum Mechanics and their consequences in the reformulation of the	C3	D1	
microscopic theory of the Classical Physics.		D12	
		D14	
		D15	
To explain the essentials of the theory of mathematical operators, including the concepts of	C3	D1	
eigenfunction and eigenvalue, spectrum, linearity and hermiticity, complete sets of eigenfunctions,		D9	
etc.		D12	
		D14	

To write the fundamental operators of Quantum Hamiltonian of simple systems).	Mechanics (position, linear and angular moment,	C3 C19	D1 D9 D12 D14
To apply the previous concepts to the quantum- particle in a square well potential, or to a harmor independent Schrödinger equation.		C3 C19	D1 D3 D6 D8 D12 D13 D14
To calculate the eigenfunctions and eigenvalues	of the angular momentum operator.	C3 C19	D6 D12 D14
To resolve the wave equation of the hydrogen at	om, and calculate its eigenfunctions (orbitals).	C3 C19	D6 D8 D12 D14
To resolve the Schrödinger equation for many-ele	ectron atoms by means of approximate methods.	C3 C19 C20	D1 D5 D6 D9 D12 D13 D14
To explain in a simple way the transitions betwee	en states and the absorption and emission spectra	a.C3 C19 C20 C22 C23	D1 D6 D8 D9 D12 D14 D15
To know the laws of Statistical Mechanics, which particular the Maxwell-Boltzmann statistics. Deriv detail its physical meaning.	govern the behaviour of many-particle systems, i ve the partition function of a system and know in	nC14 C20 C22 C23	D1 D4 D5 D6 D7 D8 D12 D13
To apply the Maxwell-Boltzmann statistics to the particles to estimate thermodynamic properties, molecular geometry and the vibrational frequence		C14 C19	D1 D4 D5 D6 D7 D8 D12 D13
Contents Topic			
Electromagnetic field: equations of Maxwell.	Displacement current. Maxwell equations. Energy. Waves equations.		
Quantización Of radiation. Wave-corpuscle dualit	photoelectric Effect X-rays. Bragg condition. Braking radiation. Compton effect Wave-corpuscle duality		
Principles of Quantum Mechanics	Limitations of Classical Physics and origin of Qua De Broglie Hypothesis Uncertainty Relationship Quantum Mechanics Postulates Virial Theorem	antum M	echanics
Quantum-mechanical Study of model systems	Introduction. Particle in a box of potential. Harmonic oscillator. Angular moment and rigid rotor.		

Method of variations.
Method of perturbations.
Introduction.
Resolution of the radial part of the equation of Schrödinger. Hydrogen-like
Orbitals.
Angular and magnetic moments electronic.
Electronic spin.
Spin-orbit coupling.
Hyperfine structure.
Spectra of Hydrogen-like atoms
Approximation of independent electrons.
Antisymmetry Principle.
Slater orbitals and basic functions.
SCF-HF Method
Terms and electronic levels.
Spectra of polielectronic atoms
Nomenclature and postulates. Canonical ensemble.
Canonical partition function.
Systems of non-interacting particles. Molecular partition function.
Canonical partition function for a pure ideal gas.
Boltzmann distribution law for non-interacting molecules.
Statistical thermodynamics for ideal gases.
Introduction to the study of real systems.

Methodologies	
	Description
Master Session	Discussion of the fundamental points of each subject and presentation of those which are going to be tackled in the seminars
Troubleshooting and / o exercises	or Resolution of numerical problems, theoretical questions and development of the theoretical points proposed in the masterclasses with the participation of the student.
Introductory activities	Presentation of the subject with a brief desription of: sections, contents, distribution of the sections in the short tests and in the final exam general norms of evaluation, etc.

Methodologies	Description
Master Session	Discussion of the main points of the subject. Answers to the questions related with the points raised by the students not only in the master session but also in the seminars. The students will know before the beginning of the course the schedules of the the tutorial sessions offered by the professors of the subject. In those tutorials the student will be able to review his/her examinations
Troubleshooting and / or exercises	Answers to the questions related with the points the students may have raised in the classes devoted to problem resolution and in the tutorial sessions. The students will know before the beginning of the course, the schedules of the the tutorial sessions offered by the professors of the subject. In those tutorials the student will be able to review his/her examinations

Description	Qualification Training
	and
	Learning
	Learning Results

Troubleshooting and / or exercises	It will consist on the resolution of exercises and tests in the classroom. Nevertheless, the teacher will be able too to ask the student to deliver the solution to previously proposed exercises, that he/she has resolved in an autonomous way. In this case the teacher may ask the student tho explain to him indivdually how he/she has resolved the exercise.	25	C19 D1 C20 D3 C22 D4 C23 D5 D6 D7 D8 D9 D12 D13 D14 D15
Short answer tests	During the course two short written tests will take place. They will correspond, respectively, to the contents of the sections 1 to 3 and 4 to 8 respectively. If any of those written tests is not passed the student must take on the corresponding part of the final exam (December/January). The student must take on the whole subject in the second-opportunity exam (June/July).	37.5	C3 D6 C14 D7 C19 D9 C20 D12 D13 D14
Long answer tests and development	At the end of the course a full written test will take place in which the students can take on those aspects that they did not pass in the short written tets or improve in those they did pass.	37.5	C3 D6 C14 D7 C19 D9 C20 D12 D13 D14

Other comments on the Evaluation

During the course two short written tests will take place corresponding to sections 1-3, the first one, and to sections 4-8, the second. Both will contain problems and questions and, if they are passed, the student, is not obliged to take on the corresponding part of the subject in the (first-call) final exam (December/January) although he/she can do so in order to improve his/her mark. On a voluntary basis the student may participate in the seminars by solving exercises on the board. Also voluntarily the student may solve at home some proposed exercises and deliver them to the teacher. The final exam will include the whole subject but is divided into two parts corresponding to the two tests so the student can take on any or both of them, even if they have passed the short written test of that part.

The student though, must reach a minimum average mark of 3.5 in the written tests in order to accumulate the points obtained by resolving exercises independently or in the classroom.

In the second-opportunity exam (July), the points obtained by exercise resolution will be mantained.

On a voluntary basis, the students will be able to participate in the resolution of exercises in the seminars or deliver the answer to the written exercises proposed in the classroom.

It will be understood that any student who has not taken any written test (short or the final exam) has not really followed the subject and will not be given a mark (his/her qualification will be "no presentado").

General description	The main objective of the course Analytical Chemistry (I) is to provide students with an overview on qualitative and quantitative chemical analysis, in both applied and theoretical issues. The different subjects addressed in the course will establish the basis for learning other more advanced topics, particularly those associated with the design and application of more complex analytical methods. Classrooms will be supplemented by hands-on experiments and seminars.

Methodologies	
	Description
Master Session	They are theoretical classes (two hours each week) in which the professor will offer a global vision of each one of the subjects of the program, specially in the most relevant issues and in those with more difficulty for the student. Classroom sessions will develop in an interactive way with the students, commenting with them the on-line material (available in the platform Tem@) and the most adapted bibliography for the preparation, in depth, of each subject.
Troubleshooting and / exercises	or Two hours per week will be devoted to problems and/or exercices solving (seminars) aimed at reinforcing the knowledges acquired during the classroom sessions. In some sessions the professor will explain to the students the problems-type that allow them to solve the worksheet exercises. Instead, in other sessions, the own students will solve and will explain in the blackboard the exercises proposed (on-line material). Will be able to request to the students that deliver, of individual form, some of these solved exercises , that will be corrected by the professor.

Laboratory practises Students will do experiments in the laboratory, in an individual way, in 3.5 hours per session. The student will have the scripts of the practices in the platform Tem@, so that they can have a previous knowledge of the experiments to perform. During the development of the practices the student will elaborate a notebook in which they will annotate all the relative to the experiment carried out (reactions, procedures, observations, results, etc.).Those students who have approved the laboratory practices in the academic year 2016-17, do not need to repeat them. In this case, marks reached in the laboratory sessions will be maintained.

Personalized attention	
Methodologies	Description
Laboratory practises	Time devoted by the teacher to solve all doubts and queries raised by students during the course. The teacher will inform students in advance on the suitable timetable for tutorials.
Troubleshooting and / or exercises	Time devoted by the teacher to solve all doubts and queries raised by students during the course. The teacher will inform students in advance on the suitable timetable for tutorials.
Tests	Description
Reports / memories of practice	Time devoted by the teacher to solve all doubts and queries raised by students during the course. The teacher will inform students in advance on the suitable timetable for tutorials.

Assessment	Description	Qualificatio	on Training and
		quameatic	Learning
			Results
Troubleshooting and / or exercises	The teacher will evaluate the exercices/problems included in the worksheets and solved by students.	15	C1 D4 C2 D5 C4 D6 C18 D7 C19 D9 C22 D14
Laboratory practises	The teacher will carry out a follow-up the performance of students in the laboratory sessions (skills acquired). It is important to indicate that it is COMPULSORY the assistance to all the laboratory sessions. The lack of assistance, even being justified, will penalize the mark (in case of justified absences are recommended to made the practice in another group). If the number of absences is equal or upper than 25 % of the laboratory sessions, students will not be allowed to pass the course.	15	A5 C1 D6 C2 D7 C4 D8 C17 D9 C18 D12 C19 D13 C20 D14 C21 D15 C22 D16 C25 C26 C27 C28 C29
Reports / memories of practice	During the laboratory sessions, students will elaborate a noteboodk in which reflects the experimental work performed (reactions, procedures, observations, results, etc.). This notebook will be evaluated by the professor.	5	C20 D1 D3 D6 D9 D12 D14 D15 D16
Short answer tests	Students will carry out a first short exam corresponding to the four first subjects of the program (20% of the final mark). If students pass this exam, they only need to pass the examination corresponding to the rest or subjects in the final exam.	20 f	A5 C1 D1 C2 D3 C4 D4 C19 D5 C20 D6 C22 D7 D9 D12 D13 D14 D16

Long answer tests and development	Students will carry out a final written exam corresponding to the four last subjects of the program. Students who have not passed the exam corresponding to the first four subjects, will need to pass the examination of the whole course.	30	A5 C1 D1 C2 D3 C4 D4 C18 D5 C19 D6 C20 D7 C22 D9 D12 D13 D14 D16
Practical tests, real task execution and / c simulated.	At the end of the laboratory sessions, students will carry out a exam so or that practical skills acquired can be evaluated. It is mandatory to overcome this examination to pass the practical part of the course.	15	A5 C28 D1 C29 D3 D6 D7 D9 D12 D13 D15 D16

Other comments on the Evaluation

First Announcement: To pass the course, it is compulsory to pass individually each one of the parts: theory and laboratory practices. For this, it is necessary to pass the written and laboratory examinations. Written exams will consist of theoretical questions and numerical exercises. To pass these exams it will be necessary to have a balance in the marks of both parts. The corresponding mark of the laboratory practices will be only taken into account once students have passed the theoretical examination. The participation of the student in any of the acts of evaluation of the course will involve the condition of presented and, therefore, the allocation of a mark. For this effect, they are considered acts of evaluation the assistance to practical laboratory sessions (two or more) and the realisation of written exams.

Second Announcement: In the extraordinary announcement the students will have to repeat those exams (theory and/or laboratory) that have not passed in the ordinary announcement. It will be preserved the mark reached by the student, during the course, in the other activities that appear in the evaluation section.

Methodologies	
	Description
Master Session	They will consist in the brief exposition by the professor of the fundamental aspects of each subject, employing the available material in the TEMA platform. Also numerical problems will be proposed for helping to comprise and settle concepts.
Seminars	Seminar will be devoted to the resolution of problems and will deepen on those aspects that present greater difficulties to the students. These classes will be mainly a task for the students under the supervision of the professor.

Personalized attention	
Tests	Description
Self-assessment tests	Students will solve autonomously questionnaires-type test through the TEMA platform and will be individually tutorized by the professor.
Troubleshooting and / or exercises	Students will solve autonomously proposed problems and will be individually tutorized by the professor.

Competencies

Code

C2 Demonstrate knowledge and understanding of essential facts, concepts, principles and theories: types of chemical reactions and its main characteristics

C10 Demonstrate knowledge and understanding of essential facts, concepts, principles and theories: properties of aliphatic, aromatic, heterocyclic and organometallic compounds

C11 Demonstrate knowledge and understanding of essential facts, concepts, principles and theories: nature and behavior of functional groups in organic molecules

C12 Demonstrate knowledge and understanding of essential facts, concepts, principles and theories: structural features of chemical elements and their compounds, including stereochemistry

C13 Demonstrate knowledge and understanding of essential facts, concepts, principles and theories: main synthetic routes in organic chemistry, including interconversions of functional groups and the formation of carbon-carbon and carbonheteroatom bonds

C19 Apply knowledge and understanding to solve basic problems of quantitative and qualitative nature

C20 Evaluate, interpret and synthesize data and chemical information

C21 Recognize and implement good scientific practices for measurement and experimentation

C23 Present oral and written scientific material and scientific arguments to a specialized audience

C25 Handle chemicals safely, considering their physical and chemical properties, including the evaluation of any specific risks associated with its use

C26 Perform common laboratory procedures and use instrumentation in synthetic and analytical work

C27 Monitor, by observation and measurement of physical and chemical properties, events or changes, and document and record them in a consistent and reliable way

C28 Interpret data derived from laboratory observations and measurements in terms of their significance and relate them to the appropriate theory

D1 Communicate orally and in writing in at least one of the official languages of the University

D3 Learn independently

D4 Search and manage information from different sources

D5 Use information and communication technologies and manage basic computer tools

D7 Apply theoretical knowledge in practice

D8 Teamwork

D9 Work independently

D12 Plan and manage time properly

D13 Make decisions

D14 Analyze and synthesize information and draw conclusions

D15 Evaluate critically and constructively the environment and oneself

Learning outcomes

Expected results from this subject

Training and Learning Results

Distinguish the most usual reactions in Organic Chemistry. Relate the energetic profile to a particular reaction. Differentiate the types of reagents. Differentiate the types of reaction intermediates.	C2 C19	D1 D3 D4 D7 D9 D12 D14
Establish the influence of the structure and the chemical features of the functional groups present in a molecule on its reactivity.	C2 C11	D1 D3 D4 D7 D9 D12 D14
Explain the reactivity of carbonyl compounds by means of a nucleophilic addition mechanism and the reactivity of carboxylic acids and their derivatives by means of an addition-elimination mechanism.	C2 C10 C11 C13	D1 D3 D4 D7 D9 D12 D14
Explain the reactivity of organic compounds with multiple carbon-carbon bonds by means of an electrophilic addition mechanism.	C2 C10 C11 C13	D1 D3 D4 D7 D9 D12 D14
Explain the reactivity of aromatic compounds through an electrophilic substitution mechanism.	C2 C10 C11 C13	D1 D3 D4 D7 D9 D12 D14
For each transformation, describe in detail the reaction mechanism, indicating reaction steps, transition states, intermediates etc.	C2 C11	D1 D3 D4 D7 D9 D12 D14
Predict the result of the reaction of a specific substrate with a given reagent in specific conditions, regarding regioselectivity and stereoselectivity of the process.	C11 C12 C13 C19	D1 D3 D4 D7 D9 D12 D14
Apply the rules for safety and health in laboratory work and carry out the treatment and correct elimination of the waste generated.	C25	D1 D3 D4 D7 D9 D12 D13 D14 D15
Carry out correctly the usual experimental procedures in simple organic preparations.	C21 C26	D1 D3 D4 D7 D9 D12 D13 D14

Carry out the work up of the reaction product, as well as its isolation and purification by means of usual techniques (extraction, distillation, recrystallization and chromatography).	C21 C26 C27	D1 D3 D4 D7 D9 D12 D13 D14
Write and describe appropriately the completed experiments in the laboratory notebook, so that they can be reproduced.	C23 C27 C28	D1 D3 D4 D7 D9 D12 D13 D14 D15
Look for and select information regarding the subjects studied.	C20	D4 D5 D8 D14 D15

Contents	
Торіс	
Lesson 1. Configurational stereoisomerism	Functional groups. Three-dimensional representation of organic structures Absolute configuration of stereogenic centres, cyclic compounds and alkenes.
Lesson 2. Reactivity of organic compounds	Acid-base reactivity of organic compounds. Reaction mechanisms: stepwise reactions. Energetic profile of a reaction. Heterolytic bond cleavage. Ionic reactions. Reaction intermediates: carbanions. Redox reactivity of organic compounds. Formal states of oxidation.
Lesson 3. Addition reactions to carbon-carbon multiple bonds	Structure and general reactivity of functional groups with carbon-carbon multiple bonds: alkenes and alkynes. Hydrogenation: heats of hydrogenation and stability of alkenes and dienes; homolytic bond cleavage; concerted reactions. Electrophilic addition reactions to alkenes. Addition of HX; reaction intermediates: carbocations; regioselectivity; electrophiles and nucleophiles. Hydration reactions; orientation and stereochemistry. Addition of halogens (X2). Dihydroxylation reactions. Addition reactions to alkynes.
Lesson 4. Aromatic substitution reactions	Structure and general reactivity of aromatic compounds. General mechanism for the electrophilic aromatic substitution reaction. Reactions with non-carbon electrophiles. Reactions with carbon electrophiles. Electrophilic aromatic substitution reactions in substituted systems: orientation and reactivity. Modulation of the reactivity of aromatic rings.
	theStructure and general reactivity of the carbonyl group (aldehydes and
carbonyl group	ketones). General mechanism for the nucleophilic addition reaction. Non reversible nucleophilic additions: addition of organometallic compounds (alkynyl anions, organolithium and organomagnesium reagents); addition of stabilized carbanions; addition of hydride. Reversible nucleophilic additions: addition of oxygen and sulphur compounds (water, alcohols and thiols); addition of nitrogen compounds (amines and other nitrogen compounds); addition of hydrogen cyanide.
Lesson 6. Reactions of nucleophilic substitutio the carbonyl group	 n at Structure and general reactivity of carboxylic acids and their derivatives. Relative reactivity of acid derivatives: basicity and electrophilic character. Non reversible addition-elimination reactions: leaving group. Reversible addition-elimination reactions: basic catalysis and acid catalysis. Reactions with water and alcohols; reactions with ammonia and amines. Structure and reactivity of nitriles. Reactions of nitriles.
Practice 1	Separation of organic compounds mixtures by using two techniques: acid- base extraction (liquid-liquid extraction) and column chromatography. Four sessions.
Practice 2	Electrophilic addition to a double bond. One session.
Practice 3	Electrophilic aromatic substitution. One session.

Practice 5 Preparation of a hydrazone. One session.	
Practice 6 Hydrolysis of an ester. One session.	
Practice 7 Synthesis project. Three sessions.

*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies	
	Description
Master Session	Exposition by the teaching staff of the syllabus' general aspects, with special emphasis in its fundamental features. The teaching staff will facilitate, through Tema, all the material needed for the student's personal work. Prior to class, the student must use this material and consult the recommended bibliography to complete the information, in order to improve his/her academic progress in the subject.
Troubleshooting and / or exercises	Two hours each week will be devoted to discussing the most prominent aspects of the topic, to solve questions arisen in the development of the lesson and to the resolution of the proposed exercises.
Laboratory practises	Laboratory experiments will be carried out, individually, in 3.5 h sessions. The students will find, in advance, in Tema, the material needed for the preparation of the experiments. At the start of each session the professor will do an exposition of the contents to be developed. During the experiments the student will elaborate a laboratory notebook recording all the observations pertinent to the experiment. At the end of the session the student will answer some questions regarding the work done.

Methodologies	Description
Troubleshooting and / or exercises	The teaching staff will attend the students' queries regarding the different topics within the subject. Attention to students schedules will be available through the Faculty of Chemistry webpage (http://quimica.uvigo.es/profesorado.php).
Tests	Description
Jobs and projects	The teaching staff will tutor the students while preparing and carrying out a short laboratory project.

Troubleshooting and / Class participation and resolution by the student of all the problems and/or or exercises proposed in time/conditions established by the teaching staff will be evaluated. 25 C2 Or exercises exercises proposed in time/conditions established by the teaching staff will be evaluated. 	D14

Short answer tests	First test: 15%. It will cover contents corresponding to the first three lessons.	60	C2 C10	D3 D7 D12
	Second test: 15%. It will cover contents corresponding to the last three lessons.		C12 C13 C19	D12 D14
	Written test for the experimental part: 15%. To be taken by the students that have achieved the mention APT in the monitoring of the laboratory work. In this test, student acquisition of competencies and skills related to the experimental aspects of the subject will be evaluated.		015	
	Global test: 15%. In this test, student acquisition of competencies and skills related to the theoretical aspects of the subject will be evaluated.			

Other comments on the Evaluation

In order to pass the subject in January, it will be required :

- Achieve mention **APT** in the evaluation of the laboratory work.
- Achieve a **minimum mark of 3 points out of 10** in each of the two short theoretical tests (first test and second test) and in the written test for the experimental part.
- Achieve a minimum mark of 4 points out of 10 in the global test.

If any of the previous conditions is not fulfilled, the final mark for the subject will be the mark obtained for the Short answer tests section multiplied by 0.6 (60%).

• Achieve a minimum mark of 5.0 in the weighted addition of the marks for all the sections (troubleshooting and/or exercises, short answer tests, jobs and projects).

The final grade for the students who pass the subject could be standardized so that the highest mark can reach a value of up to 10 points.

The participation of the student in any of the acts of evaluation for the subject will involve the condition of "presentado/a" and, therefore, the assignment of a mark. The acts of evaluation that will be considered are: assistance to laboratory practices (25% or more) or the delivery of reports/exercises (25% or more) or taking any examination.

Students of 2nd and subsequent enrollment. Those students who passed the laboratory practices during the 2014-15 or 2015-16 courses or were evaluated as APT during the 2016-17 course will be awarded the APT mention for the monitoring of laboratory work in the academic course 2017-18, not being necessary the completion of the experimental work again. However, they must elaborate the report of the project (15%) and take the written test for the experimental part (15%) to achieve the mark for the experimental part of the subject in the academic course 2017-18.

EVALUATION IN JULY

45% of the Short answer tests section can be repeated in July, in the following way:

- Tests (30%). It will be carried out a global test in which the competences acquired in the theoretical aspects of the subject will be evaluated. The student must achieve a minimum mark of 4 points out of 10 so that the result of this test will be taken into account in the global mark of the subject. This result will substitute the two lower marks obtained for the three theoretical tests carried out during the semester (first test, second test and global test), keeping the higher mark of the three, as long as it exceeds the required minimum.
- Written test for the experimental part (15%). A minimum mark of 3 points out of 10 must be achieved. The new mark will substitute the one achieved in the written test for the experimental part taken at the end of the semester.

The final mark will be the weighted addition of the marks for all the sections (troubleshooting and/or exercises, short answer tests, jobs and projects), as long as all the required minima are reached. If this is not the case, the final mark for the subject will be the mark obtained for the Short answer tests section multiplied by 0.6 (60%). In case that this mark was lower than the one obtained in the end of semester evaluation, the official mark will be this last one.

C22	Process and perform computational calculations with chemical information and chemical data
C23	Present oral and written scientific material and scientific arguments to a specialized audience
D1	Communicate orally and in writing in at least one of the official languages of the University
D2	Communicate at a basic level in English in the field of chemistry
D3	Learn independently
D4	Search and manage information from different sources
D5	Use information and communication technologies and manage basic computer tools
D8	Teamwork
D9	Work independently
D10	Work at a national and international context
D14	Analyze and synthesize information and draw conclusions
D15	Evaluate critically and constructively the environment and oneself
D16	Develop an ethical commitment
D18	Generate new ideas and show initiative

Learning outcomes		
Expected results from this subject	Trai	ning and Learning Results
(*)Distinguish and handle the distinct sources of scientific and technical information (books,	C23	D1
magazines, summaries, databases, pages web, patents, etc.).		D2
		D4
		D5
		D9
		D14
		D16
(*) Differentiate and classify the scientific magazines and the contributions to the same, respect to		D2
their thematic, aim and scope.		D4
		D5
		D8
		D9
		D14

(*) Find and absorb information in a fast and effective way.	C23	D1 D2 D3 D5 D8 D9 D10
		D15
(*) Resume and classifiy the information for its effective broadcasting.	C23	D18 D1
(*) Resume and classify the mormation for its ellective broadcasting.	C25	D1 D2
		D5
		D8
		D10
		D16
(*) Argue the own opinions showing critical sense.	C23	D1 D2
		D2 D5
		D8
		D10
		D16
(*) Performd simple written documents for the diffusion of knowledges and the scientific and	C23	D1
technical results (p.ej. Articles, reports, works).		D2 D5
		D5 D8
		D10
		D16
(*) Handle with critical spirit the network (""""internet"""") as an information source.	C22	D3
		D5
		D9
		D14 D16
(*) Perform academic oral presentations on subjects related with the Chemistry, using audiovisual	C23	D10
media.	625	D2
		D14
	-	D18
(*) Organise the bibliography, with or without help of bibliographic tools.	C20	D3
		D4 D5
		D9
		D14
		D15
(*) Use computer programs for the preparation of figures and charts.	C22	D4
		D5
(*) Comprehend the basic principles and utility of simulation programs of chemical processes.	C22	D9 D5
() comprehend the basic principles and utility of simulation programs of chemical processes.	022	D9
		D14
(*) Comprehend and explain texts in English related with Chemistry.	C23	D1
		D2
		D3 D8
(*) Draft simple documents and perform short oral presentations in English, on subjects related	C23	D0 D1
with Chemistry.	625	D2
		D3
		D8
		D14
(*) Identify the most important programs of molecular modelling and understand the usefulnes of the results obtained.	C20	D3 D4
		D4 D14

Practice in computer rooms

Description

Troubleshooting and / or exercises

Assessment	Description	Qualification		nd Learning sults
Practice in computer rooms	Typically, literature searches	20	C22 C23	D1 D2 D3 D4 D5 D9 D15 D16
Troubleshooting and / or exercises	Tipically, database searches and use of utilities of modelling software.	40	C22 C23	D1 D2 D3 D4 D5 D8 D10 D14 D15 D18
Long answer tests and developmen	tWritten exam consisting of short questions.	40		D1 D2 D14 D15

Other comments on the Evaluation

Attendance at practical lectures (seminars) is compulsory. The student will be given a rating (0-10) as long as he/she has attended 3 or more seminar sessions, has delivered at least two reports on the exercises or practices proposed by the teacher or has done a written exam.

If the student fails in the first call he/she will be asked to improve some of the exercises or perform new ones provided by the teacher. In addition he/she will have to undergo a more thorough exam, which will weight 50% of the final grade.

	Description
Master Session	Exhibition of the theoretical bases and orientation by part of the *profesorado on the contents of the matter
Practice in computer rooms	Development in the classrooms of computing of the exercises that propose in the theoretical classrooms using the scientific calculator ** MATLAB.

Personalized attention	
Methodologies	Description
Practice in computer rooms	The students will work of autonomous way with the permanent supervision of the professor

Assessment				
	Description	Qualificatio	Lear	ning
·				ults
Practice in computer rooms	At the end of the sessions in the classrooms of computing, the student will resolve some exercises of the even type that the ones of the realised in the classroom.	25	C19 C22 C29	D6
Multiple choice tests	During the course will realise **alomenos three partial proofs short type test and practical type that will explain a 25 by one hundred in the final qualification. Besides, in a final proof, will realise another tests type test of **tódala matter that *contabilizará another 10 by one hundred in the final qualification.	35	C19 C22 C29	D6
Troubleshooting and / or exercises	When finalising the course **realizaráse a practical proof resolving some practical exercises in the classroom of computing	30	C19 C22 C29	D6
Jobs and projects	**Participacion With *aprovechamiento in all the activities proposed by the *profesorado, are these to realise inside or out of the classroom.	10	C19 C22 C29	D6

Other comments on the Evaluation

The students that do not surpass the *materiaen the common announcement and pretend to do it in the

*convocatoriaextraordinaria, will keep the qualifications obtained during the course in each *unode the previous sections, except the qualifications of the practical proofs of computing, that will be able to be recovered, and *lasdos proofs realised at the end of course that will be evaluated in the *examencorrespondiente. In this case, the student has to put in contact with the professor with sufficient *antelación to agree the work to realise before the final proofs. The participation of the student in any of the acts of evaluation of the matter will involve the condition of &*quot; presented&*quot; and, therefore, the allocation of a qualification. They consider acts of evaluation the assistance to the practices of computing (four or more), the realisation of some proof or the delivery of a minimum of 25% of the problems or exercises commissioned by the professor.

Learning outcomes Expected results from this subject

Training and Learning Results

Formulate molecular Hamiltonians, with use of the Born-Oppenheimer approximation and discussion of their consequences.	C3 C20 C22 C23	D1 D3 D4 D5 D6 D7 D9 D12 D13 D14
Work with potential energy profiles and surfaces and understand related concepts.	C3 C19 C20 C22 C28 C29	D1 D3 D4 D5 D6 D7 D9 D12 D13 D14
Apply MO and EV methods for describing the chemical bond in simple systems and understand the limitations of these methods.	2 C3 C8 C19 C20 C21 C22 C23 C27 C28 C29	D1 D3 D4 D5 D6 D7 D9 D12 D13 D14 D15
Describe orbital localization techniques and the basis for atomic orbital hybridisation.	СЗ	D1 D3 D4 D6 D9
Apply, with understanding of their foundations and their limitations, the main calculation methods (HF, DFT, post-HF) for the study of molecular structures.	C3 C19 C20 C22 C23 C28 C29	D1 D3 D4 D5 D6 D7 D9 D12 D13 D14
Describe the forms of radiation-matter interactions and formulate the selection rules of electrical dipole.	C8	D1 D3 D4 D6 D9
Relate the radiation frequency with the molecular motion responsible of a spectroscopic transition	. C8	D1 D3 D4 D6 D7 D9
Justify the broadening of spectral lines and the enviromental effects on different spectra.	C8	D1 D3 D4 D6 D9

Interpret rotation and vibration-rotation spectra to obtain structural information, making use of simple quantum-mechanical models (rigid and flexible rotor and harmonic and anharmonic oscillators), selections rules and line assignment techniques.	C3 C8 C19 C20 C22 C23 C27 C28 C29 C3	D1 D3 D4 D5 D6 D7 D9 D12 D13 D14 D1
	C8	D3 D4 D6 D9
Interpret electronic and photoelectronic spectra and obtain structural information.	C3 C8 C19 C22	D1 D3 D4 D5 D6 D7 D9
Describe the different deactivation processes of excited electronic states and their representation in a Jablonski diagram.	C8 C19	D1 D3 D4 D6 D9
Describe the foundations of magnetic resonance spectroscopies, and interpret the physical origin of chemical shifts and couplings in NMR spectra.	C8 C19 C22	D1 D3 D4 D6 D9
Describe the instrumental peculiarities of the spectroscopic techniques in different spectral regions, as well as the foundations and applications of laser and Fourier-transform based techniques.	C8	D1 D3 D4 D6 D9
Apply the theoretical knowledge of Physical Chemistry I to determine experimentally chemical equilibrium constants, activity coefficients and thermochemical magnitudes.	C6 C19 C20 C21 C23 C27 C28 C29	D1 D3 D4 D5 D6 D7 D8 D9 D12 D12 D13 D14 D15

Introduction to group symmetry theory in	- Symmetry elements and operations.
chemistry	- Symmetry point groups.
	- Matrix representations.
	 Irrdeducible Representations. Character tables.
	- Chemical applications.
Qualitative spects of molecular electronic	- Born-Oppenheimer approximation.
structure.	- The H2+ molecule.
	- The MO method for homonucler and heteronuclear diatomic molecules.
	- The MO method in polyatomic molecules.
	- The VB method.
Quantitative treatments for the study of the	- Hartree-Fock method.
molecular electronic structure.	- post-Hartree-Fock methods.
	- Semiempirical methods.
	- Calculation of molecular properties

Introduction to Molecular Spectroscopy.	 Radiation-matter interaction: General approach. Transition dipole moment integral. Selection rules. Intensity and position of the spectral transitions. Instrumentation.
Rotational spectroscopy.	 Pure rotation spectra of diatomic molecules. Rigid and elastic rotor models. Pure rotation spectra of polyatomic molecules. Pure rotation Raman spectra. Instrumentation and applications.
Spectroscopy of Vibration-rotation.	 Vibration-rotation spectra of diatomic molecules. Harmonic and anharmonic oscillator models with rotation depending on vibration. Vibration-rotation spectra of polyatomic molecules. Vibration-rotation Raman spectroscopy. Instrumentation and applications.
Electronic spectroscopy.	 Molecular Electronic states. Vibration-rotation structure: Franck-Condon principle Chromophore and auxochrome Groups. Electronic deactivation Processes. Instrumentation and applications. Lasers. Photoelectron Spectroscopy and related techniques.
Spectroscopies of Resonance.	 Introduction to the magnetic resonance. Chemical shift. Spin-spin interaction. Coupling Constant. Electronic spin resonance Spectroscopy.
Practices of Chemical Thermodynamics (six sessions)	 Experimental determination of chemical equilibrium constants employing spectroscopic or potentiometric techniques. Experimental determination of combustion, dissolution, neutralisation, fusion or vaporisation enthalpies. Colligative Properties. Experimental determination of activity coefficients employing potentiometric techniques.
Practices of Quantum Chemistry and Spectroscopy (seven sessions).	 Computational study of the electronic structure of different molecules Computational Study of conformational isomery. Computational study of simple chemical processes. Prediction, theoretical interpretation and resolution of the vibration- rotation spectrum of HCl in gas phase. Electronic spectroscopy: Spectrum of the I2 molecule in gas phase.

*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies	
	Description
Master Session	They will consist in the presentation of the fundamental aspects of each subject by the teacher, using the material available in the TEM@ platform (diagrams, bulletins of problems,). In addition, numerical problems will be proposed for a better understanding of theoretical concepts.
Seminars	The classes of seminar will be mainly work of the student, under the supervision of the professor, and will be used for: - Problems solving, individually or by groups. - Once the student has worked the basic concepts, reinforce those contents of each subject that can present a greater complexity.

Laboratory practises Completion of laboratory or computational chemistry practices under the supervision of a teacher in an autonomous way. Lab practices will be done by pairs in sessions of 3,5 hours. With advance enough, students will have in the TEM@ platform guide notes for the practices together with all the additional neccessary material. Guide notes will present the essential elements to realise the experimental or computational practices, as well as the fundamental theoretical points and further data treatment. After practice completion, in the terms set by the teacher, it will be necessary to deliver the corresponding report, elaborated following the guidelines given by the teacher. Autonomous For each one of the subjects, some problems or other works to be solved by the student and troubleshooting and / or delivered to the teacher in due time will be proposed.

Personalized attention	
Methodologies	Description
Master Session	In tutorial sessions, the teacher may solve in an individual and more personal way those doubts of the students that can arise along the course in any one of its parts (theory lessons, seminars, laboratory practice and the several types of autonomous activities to realise).
Seminars	In tutorial sessions, the teacher may solve in an individual and more personal way those doubts of the students that can arise along the course in any one of its parts (theory lessons, seminars, laboratory practice and the several types of autonomous activities to realise).

Practical tests, real task execution and / or simulated.	In tutorial sessions, the teacher may solve in an individual and more personal way those doubts of the students that can arise along the course in any one of its parts (theory lessons, seminars, laboratory practice and the several types of autonomous activities to realise).

Assessment				
	Description	Qualification	a Lea	ining Ind Irning sults
Laboratory practises	This mark comprises the effort and the attitude, the skills and the competitions developed by the student during the realisation of the laboratory practices.	ata 10,0	C3 C6 C8 C19 C20 C21 C22 C27 C28	D1 D4 D5 D6 D7 D8 D12 D13 D14 D15

Autonomous troubleshooting and / o exercises	For each one of the subjects or groups of subjects, problems or or additional work to be done by the students will be proposed.	ata 3,75	C3 C8 C19 C20 C22 C23	D5 D6
Long answer tests and development	Realisation of one global writing test at the end of the term, in a date set by the Faculty of Chemistry.	como mínimo 52,5	C3 C8 C19 C20 C22	D1 D3 D6 D9
Reports / memories of practice	Students must present a report for a laboratory practice proposed by the teachers. Students have to take care on format aspects related to the organisation, the correct use of the units, and the correct preparation of graphics and exhibition of the results. It will be also evaluated the critical analysis of results and getting right conclusions. Besides, all the practices will be evaluated by means of oral questions that the students can answer with the help of their laboratory notebook.	ata 5,0	C3 C6 C8 C19 C20 C22 C23 C27 C28 C29	D1 D3 D4 D5 D6 D8 D9 D12
Short answer tests	Realisation of two short writing test (not liberatory) along the term, in dates set by the Faculty of Chemistry.	hasta 15	C3 C8 C19 C20 C22	D9
Multiple choice tests	For each each subject or group of subjects the student will have the opportunity of answer quiz tests through the TEM@ platform.	ata 3,75	C3 C8 C19	D3 D4
Practical tests, real tas execution and / or simulated.	k This written proof will be done in the date fixed by the Faculty of Chemistry and about the contents and skills that the student has to have purchased during the development of the laboratory practices. The questions will be situated, in some cases, in the context of some of the experiences realised by the student and, in others, will be more general. These questions will be used to evaluate the capacity to solve the problems presented.			D1 D3 D4 D6 D7

Other comments on the Evaluation

The evaluation of the course will take into account the part mentioned above, with distinction between the theoretical and the practical parts of the subject.

Theoretical part: The evaluation will suppose, in his group (proofs (90%), problems solving (5%), quiz-tests (5%)), 75% of the final qualification of the subject. 2 proofs will be done during the course.

If the student passes the first proof (it will take place around the midle of the 4-months periode, he/she could only answer the questions related to the second part of the subject. Proofs qualification will be the average of the two proofs. When the first proof is repeated the best qualification is the only one to be used for the average,

It is required to pass the subject to obtain in the long proof a minimum qualification of 4,0 on 10,0 points. In the case of not reaching this punctuation the qualification that will reflect in the record will be not larger than 4,0.

Besides, it will be necessary to obtain an average of 2,5 in the theoretical questions of the examinations (short and long proofs). If it did not reach this punctuation the note reflected in the record will not surpass 4,0.

Practical part: The evaluation will contribute, in his group (practices of laboratory (40%), reports and oral questions(20%) and proof written of practices (40%)), 25% to the final qualification of the matter.

It is indispensable requirement to surpass the matter to obtain in the practical part a minimum qualification of 5,0 on 10 points. In the case of not reaching said punctuation the qualification that will reflect in the record will not be able to surpass 4,0.

The assistance to the practical sessions is compulsory (absences to sessions should be properly justified) and, therefore, is not possible to approve the matter in the case of not to have them realised.

Condition of presented/no presented: The realisation of the proofs, or of the proof written of practices, or the assistance to five sessions of laboratory, will involve the condition of presented/to and, therefore, the allocation of a qualification.

Second Opportunity: For the evaluation in the second opportunity, will keep the qualifications and the percentages of the problems/works proposed, of the practices of laboratory and the corresponding reports and of the quiz-tests. In the case to have an equal or upper qualification to 5,0 points in the global proof (long) or the same or upper to 4,0 in the proof written of practices, will keep said qualification (and the percentage) and only will be necessary to realise to another.

	Lear	ning outcomes

cted results from this subject		Training and Learning	
		Results	
Distinguish the different chemical behaviour of the elements of the main groups inside each group.	C1	D1	
	C2	D3	
	C9	D4	
		D9	

Choose the general method more adapted for the obtaining of the elements of the main groups	C1	D1
from his present compounds in the nature.	C2	D3
	C9	D4
		D9
Identify in each group of elements of the main groups those types of singular compounds and of	C1	D1
particular importance by his structure or his reactivity.	C2	D3
	C9	D4
	C12	D9
	C14	
Deduce the physical properties of a compound from the type of link between his components and	C9	D1
his structure.	C12	D3
	C14	D4
	C20	D9
	C23	
Relate the physical and chemical properties of the elements of the main groups and of his	C2	D1
compounds with his applications.	C9	D3
	C12	D4
	C14	D9
	C23	
Carry out in the laboratory the preparation and the study of some physical and chemical propertie	s C25	D4
of elements of the main groups and of his compounds.	C26	D5
	C27	D6
	C28	D7

Methodologies

	Description	
Master Session	Exhibition by part of the professor on the subject to develop, doing special emphasis in the most	
	important appearances or of difficult understanding for the student. The professor/to will use the	
platform *Tem@ to give information on the matter or on his development.		
Troubleshooting and / or They will devote two weekly hours to argue and resolve questions on the matter that previously the		
exercises	student will have to work.	
Laboratory practises	The experiments will realise along 12 sessions of 3,5 hours each one. The student will have of the	
	scripts of practices as well as of the material of support in the platform *tem@ with the end that it	
	can have previous knowledge of the experiments to realise. The student will have to elaborate the	
	fascicle of laboratory during the realisation of the practices.	

Personalized attention

Methodologies

Troubleshooting and / or exercises

Assessment Description Qualification Training and Learning Results 15 C1 Troubleshooting and / or It will value the resolution by part of the student of a series of problems D1 exercises and/or exercises proposed in the time/condition established/ace by the C2 D3 professor. C9 D4 The punctuation will be considered if in each one of the eliminatory C12 D6 proofs reaches an equal or upper qualification to 5 points on 10. C14 D7 C23 D9 D13 It is compulsory the assistance to the sessions of laboratory. The 25 C25 Laboratory practises D4 professor will realise a follow-up of the experimental work realised by C26 D5 the student in the sessions of laboratory, as well as of the fascicle C27 D6 elaborated (10%). C28 D7 It will realise a proof that will allow to evaluate the competitions and D8 skills purchased by the student (15%). D9 The punctuation will be considered if in each one of the eliminatory D12 proofs reaches an equal or upper qualification to 5 points on 10. D13 D14 D15 Long answer tests and 2 Proofs on concrete appearances of the contents explained in class and 60 C1 D1 seminars. Each proof will be able to be eliminatory when the student development C2 D6 reach a minimum qualification of 5 points on 10. C9 D7 To be able to approve the matter, the student will have to reach in each C12 one of the eliminatory proofs a minimum qualification of 5 points on 10. C14 C20

Other comments on the Evaluation

The assistance to the theoretical classes, practices of laboratory and seminars is compulsory.The&*nbsp; participation of the student in any of the acts of evaluation of the matter will involve the condition of []presented/to[] and, therefore, the allocation of a qualification. They consider acts of evaluation the assistance to the practical classes of laboratory (three or more) and the realisation of proofs.The students will be able to realise a Final Proof, that will be able to have a value of until a 60 %, in the date of closing of evaluation of the announcement of May-June when they require:

- Surpass any of the eliminatory proofs.

- Go up the note of the eliminatory proofs that allow him reach the minima required to approve the matter.

- Go up the note in the eliminatory proofs to improve the final note of the matter.

Description

Announcement of Julio. The students that do not surpass the matter at the end of the *cuatrimestre will have to do a proof written in the period of closing of evaluation of the announcement of July. Said proof will substitute the results of the eliminatory proofs realised along the *cuatrimestre and will have a value of until a 60 %. The qualification of resolution of problems and practical of laboratory obtained to along the *cuatrimestre keeps .
