	a) resources and bibliographic references in English,	b) tutoring session	ons in English, c	)
	exams and assessments in English.			

- A2 Students can apply their knowledge and understanding in a manner that indicates a professional approach to their work or vocation, and have competences typically demonstrated through devising and sustaining arguments and solving problems within their field of study
- A3 Students have the ability to gather and interpret relevant data (usually within their field of study) to inform judgments that include reflection on relevant social, scientific or ethical issues
- A4 Students can communicate information, ideas, problems and solutions to both specialist and non-specialist audiences
- A5 Students have developed those learning skills that are necessary for them to continue to undertake further study with a high degree of autonomy
- B2 Plan and execute surveys in the field and laboratory work, applying basic tools and techniques for sampling, data acquisition and analysis in the water column, sea bottom and marine substratum.
- B3 Recognize and implement good practices in measurement and experimentation, and work responsibly and safely both in field surveys and in the laboratory.
- B4 Manage, process and interpret the data and information obtained both in the field and in the laboratory.
- C8 Know the main pollutants, their causes and effects in the marine and coastal environment.
- C11 Apply the knowledge and techniques acquired to the characterization and sustainable use of living resources and marine ecosystems.
- D1 Develop the search, analysis and synthesis of information skills oriented to the identification and resolution of problems.
- D2 Acquire the ability to learn autonomously, continuously and collaboratively, organizing and planning tasks over time.
- D5 Sustainability and environmental commitment. Equitable, responsible and efficient use of resources.

Contents	
Торіс	

Basic concepts	1. Introduction. Pollution, anthropogenic process. Pollution: deleterious effects. Environmental Quality Criteria and Standards. PBT substances. Sources, distribution and fate of pollutants in the marine compartments.
Urban and agriculture pollutants	<ol> <li>Organic pollution. Sources: liquid wastes. Estimating the organic load in wastewaters and receiving waters: BOD, COD, TOC. Excess of organic matter: hypoxia and annoxia.</li> <li>Pollution by excess of inorganic nutrients. Nitrogen and phosphorus in the marine environment; anthropogenic sources. Eutrophication and hypereutrophication. Detergents.</li> </ol>
	4. Microbial pollution. Pathogenic microorganisms present in marine waters. Microbiological analysis of water and shellfish. Self-depuration of natural waters. Disinfection of wastewaters.
Industrial pollutants	5. Hydrocarbons. Oil. Polycyclic Aromatic Hydrocarbons. Sources and weathering of oil in the sea. Effects on marine organisms. Oil spills, lessons learnt.
	6. Organohalogenated pollutants. Organochlorine pesticides: sources and levels in the marine compartments; bioaccumulation and biomagnification. Toxicity. Polychlorinated biphenyls (PCBs). Polybrominated campounds (PBDEs); sources and levels in the marine compartments; toxicity. Dioxins and dibenzofurans.
	7. Trace metals I. Background levels and enrichment factors. Distribution in the oceans. Mercury: Sorces, distribution, bioaccumulation and biomagnification. Toxicity. Methylmercury.  8. Trace metals II. Copper, lead, cadmium. Sources, concentrations in
	marine compartments, toxicity. Trobutyltin (TBT).
Ecotoxicology	<ol> <li>9. Distribution of pollutants in the environment. Fugacity models.</li> <li>Environmental persistence and half-life. Biodegradation. Chemical speciation and bioavailability of metals.</li> <li>10. Bioaccumulation. Toxicokinetics. Uptake, accumulation and biotransformation of pollutants in the organisms. Bioconcentration factor (BCF). First order kinetic bioaccumulation models. Thermodynamic</li> </ol>
	bioaccumulation models, Kow.  11. Molecular and cellular responses to pollutants: biomarkers.  Biotransformation and elimination of toxic chemicals. Lisosomal alterations. Metallothioneins and stress proteins. Cytochrome P450.  Enzymatic alterations.
	12. Lethal and sublethal toxicity. Basic principles of toxicology.  Dose:response curves. LC50/EC50 and toxicity threshold. Time and other factors affecting toxicity. Effects on reproduction and development. Effects on the bioenergetics and growth.  13. Effects of pollution at population and community levels. Changes in the
	presence and abundance of populations. Bioindicators by presence and
Manageing and assessing marine environmental quality	ausence. Biological indices in communities.  14. Integrative assessment of marine pollution. Coastal pollution monitoring programs. Integration of chemical and biological methods. Use of wild organisms as bioindicators and laboratory bioassays. The mussel watch approach
	15. Ecotoxicological bioassays. requirements and methodological aspects. Liquid phase: copepod survival, Seaurchin Embryo Test (SET). Solid phase: amphipod survival, bivalve burrowing. In situ bioassays.  16. Protection of the marine environment. I. Control at the point source discharges. Identification of priority pollutants. Evaluation of the ecological risk. Regulation of new chemical products. REACH. Regulation of complex effluents.
	17. Protection of the marine environment. II. Control of the levels of pollutants in receiving waters. Sediment and Water Quality Criteria and standards. International legislation. Water Framework Directive. Marine Strategy Framework Directive.

Methodologies	
	Description
Lecturing	The theoretical contents that will be evaluated in two calls, one exam along the course and another at the end.
Seminars	The basic scheme of the seminars consists in the following: 1. preparation by the student of a questionary and a practical case available through TEMA. 2. handing over the questionary to the teacher at the beginning of the seminar. 3. resolution and discussion of the case in common with the teacher.  Attendance is mandatory.
Studies excursion	Field trip to a supposedly polluted zone with basic sampling material for sediments, water and biota. Collection of representative samples with support of the professor for further analysis in laboratory.  Attendance is mandatory.
Laboratory practical	The practices consist in a field trip to an impacted site in the Port of Vigo, and the collection of environmental matrices (water sub-superficial with oceanographic bottle, sediment with *draga Vain *Veen dredge) and native mussels, with object to realize a series of observations, chemical analyses and biological essays in the laboratory, including the solids in suspension, phosphates, BOD5 and faecal microorganisms in water, organic matter, presence of indicator species and ecotoxicological bioassays with the sediments.  After the days of laboratory the data obtained are shared in the TEMA platform, and individual memories must be ellaborated and handed over to the teacher by the date of the final exame. Attendance is mandatory.

Personalized assistance				
Methodologies	Description			
Lecturing	Power point presentations in the classroom; personal assitance in my office at tutorial times. To better optimize the procedure, the student is requested to contact the teacher in advance by email, with reasonable anticipation.			
Laboratory practical	Practical work in the laboratory. Students who wish may attend personal tutorials to resolve doubts and/or uncertainties, mainly at the times indicated on the faculty website and/or on the MOOVI platform. To better optimize the procedure, the student is requested to contact the teacher in advance by email, with reasonable anticipation.			
Seminars	Questionaire ellaboration and discussion. Students who wish may attend personal tutorials to resolve doubts and/or uncertainties, mainly at the times indicated on the faculty website and/or on the MOOVI platform. To better optimize the procedure, the student is requested to contact the teacher in advance by email, with reasonable anticipation.			

Assessment						
	Description	Qualification	Tı	_	and Lea	arning
Lecturing	Multiple choice questions exame.  Two tests will be designed: one with 30% along the course and another final with 40% coinciding with the call for 1st opportunity.		A2 A3 A4 A5	B2 B3 B4	C8 C11	D1 D2 D5
Seminars	Mandatory presence in the seminars. Delivery of the corresponding individual questionnaires		A2 A3 A4 A5	B2 B3 B4	C8 C11	D1 D2 D5
Laboratory practical	Mandatory presence in the practices and an individual report	15	A2 A3 A4 A5	B2 B3 B4	C8 C11	D1 D2 D5

## Other comments on the Evaluation

**Global assessment option:** The application for this evaluation option must be submitted in the time and manner determined by the Center, which will be published prior to the academic start. Given the experimental nature of the practices and seminars, attendance at them is mandatory to be eligible for this evaluation option. **Failure to attend the practices, with no justified cause invalidates this possibility, as well as the opportunity for extraordinary evaluation (2nd opportunity).** 

**2nd opportunity assesment:** All tests performed in continuous evaluation may be recovered at the 2nd opportunity, manteining the corresponding percentage indicated above.

Date, time and place of exams will be published in the official web of Marine Sciences Faculty:

http://mar.uvigo.es/index.php/en/alumnado-actual-2/examenes-3

Students are strongly advised to fulfil an honest and responsible behaviour. It is considered completely unacceptable any alteration or fraud (i.e., copy or plagiarism) contributing to modify the level of knowledge and abilities acquired in exams, evaluations, reports or any kind of teacher proposed work. Fraudulent behaviour may cause failing the course for a whole academic year. An internal dossier of these activities will be built and, when reoffending, the university rectorate will be asked to open a disciplinary record

## Other comments on the Evaluation

Every report must be filed no later than 7 days after the seminar, and none will be evaluated if sent after that timeframe and the grade will be 0.

When a student files his/her report his status in this subject will change to presented.

The final grade of the subject will be the sum of 40% of the final (official) test (ot), 40% of an intermediate test (ie), and a 20% from the seminars | test (st), according to the formula:

N=0.4\*ot+0.2\*ie+0.4\*st

The grade in the official test must be at least 5 (from 0 to 10).

CONTINUOUS EVALUATION of the education in the classroom:

Intermediate test half course (1 hour, 40% divided between 20% problems and 20% objective questions). The test will take place during the theoretical classes, and be part of the faculty sets schedule.

SEMINARS CONTINUOUS EVALUATION.

Seminars individual report (20%). The students must assist to the seminars, and do the reports again, the following, year if they don to pass the subject.

The seminars and partial test qualification will be saved for the second opportunity.

Final oficial test (3 hours, 40%).

GLOBAL EVALUATION PROCEDURE: For the students choosing this modality, there will be a global oral evaluation test, in the language chosen by the student, the same day of the official test according to the faculty schedule. This test will be public and the audio and video will be recorded. The application for this evaluation option must be submitted in the time and manner determined by the Center, which will be published prior to the academic start.

Students are strongly requested to fulfil a honest and responsible behaviour. It is considered completely unacceptable any alteration or fraud (i.e., copy or plagiarism) contributing to modify the level of knowledge and abilities acquired in exams, evaluations, reports or any kind of teacher proposed work. Fraudulent behaviour may cause failing the course for a whole academic year. An internal dossier of these activities will be built and, when reoffending, the university rectorate will be asked to open a disciplinary record.

The tests' classroom, date and time will be published at the Marine Sciences' website:

http://mar.uvigo.es/alumnado/examenes/

-	resources.	·		
	English Friendly subject: International students may re a) resources and bibliographic references in English, b exams and assessments in English.			

- A1 Students have demonstrated knowledge and understanding in a field of study that builds upon their general secondary education, and is typically at a level that, whilst supported by advanced textbooks, includes some aspects that will be informed by knowledge of the forefront of their field of study
- A2 Students can apply their knowledge and understanding in a manner that indicates a professional approach to their work or vocation, and have competences typically demonstrated through devising and sustaining arguments and solving problems within their field of study
- A3 Students have the ability to gather and interpret relevant data (usually within their field of study) to inform judgments that include reflection on relevant social, scientific or ethical issues
- A5 Students have developed those learning skills that are necessary for them to continue to undertake further study with a high degree of autonomy
- B1 Know and use vocabulary, concepts, principles and theories related to oceanography and apply everything learned in a professional and/or research environment.
- B4 Manage, process and interpret the data and information obtained both in the field and in the laboratory.
- B5 Develop, implement and write basic or applied projects in oceanography from a multidisciplinary perspective.
- C12 Acquire knowledge about processes and products related to internal and external geological cycles.
- C13 Acquire the basic sedimentological, geochemical and geophysical techniques and methodologies used in identification, use and sustainability of the natural resources of coastal and marine environmets.
- C14 Know basic concepts and events of global change obtained from geological records.
- D1 Develop the search, analysis and synthesis of information skills oriented to the identification and resolution of problems.

Expected results from this subject				
Expected results from this subject	Training and Learning Results			
1. Know the main applications of the Marine Geology regarding natural resources, risks, environmental problems and associated to the Global Change.	A1 A2 A3 A5	B1	C13 C14	D1
2. Know the main coastal and submarine geological risks and his consequences. Purchase the capacities for the design of measures of adaptation in prevention of risks.	A1 A2 A3 A5	B5	C13	D1

3. Know and modeling the antrophic impacts on coastal and marine environments and the	A1	B5	C12	D1
methodology of regeneration, restoration and protection.	A2		C14	
	А3			
	A5			
4. Know the main geological resources of the half marine and his training, as well as the basic	A1	В1	C12	D1
strategies of exploration and exploitation. Other applications: methods on CO2 capture.	A2	B5	C13	
	А3			
5. Realisation of technical reports	A3	В1	C14	D1
		В4		
		B5		

Contents	
Topic	
1. Geological risks associated with the marine and coastal environment. (6 hours).	Introduction 1.1. Definition and types of geological risks. 1.2. Coastal and submarine risks linked to internal geodynamics. 1.3. Coastal and submarine risks linked to external geodynamics. 1.4. Sea level changes.
2. Seawater as a source of resources and environmental control. (4 hours).	<ul> <li>2.1. Physicochemical and compositional characteristics of seawater.</li> <li>2.2. Urey's equation: the terrestrial thermostat and the stability of the ocean's pH.</li> <li>2.3 Processes for obtaining salts: sequential evaporation of seawater.</li> <li>Desalination and brine recovery plants.</li> <li>2.4. Practical example: Recovery of lithium from seawater: reality or utopia?</li> </ul>
3. Genesis, exploration and exploitation of marin geological resources (8 hours).	<ul> <li>18.3.1 Fossil hydrocarbons: oil, gas and gas hydrates.</li> <li>3.2 Submarine mining: manganese nodules and crusts. Metallic polisulfides.</li> <li>3.3 Exploration of the ocean floor: geohabitats.</li> <li>3.4 Exploration of the oceanic subsoil in IODP expeditions.</li> </ul>
Seminars.	Seminar I. Stratigraphic control in oil exploration wells (6 hours).  Seminar II. Geological capture of atmospheric CO2. (2 hours).  Seminar III. Techniques for mineralogical and geochemical analysis of marine sediments. (2 hours).  Seminar IV. Practical case: aquifer salinization models on the coast of Almería (4 hours).
Field trips.	Two field trips to analyse flood risk and anthropic effects along different Galician coastal areas (16 hours).
Laboratory practices.	Laboratory practices: Crystallization processes applied to the formation of marine mineral resources. (4 hours.).

Assessment	Description	Qualification		Training a arning Re	
Seminars	The activity of the seminars is focused on the development of specific topics, complementary to the theoretical classes, which may involve solving exercises on practical cases.  Attendance at the seminars is mandatory in order to access the continuous assessment.		A2 A3 A5		D1
Laboratory practical	Crystallization processes and their application to the formation of marine mineral resources are analyzed using experimental techniques. Attendance is mandatory and active participation is evaluated.	5	<b>43</b>	C13	D1
Studies excursion	Some of the most relevant aspects described in the theoretical program are analyzed through the geological trips through different points of the Galician coast.  It is a clinical/experimental activity and, therefore, mandatory attendance is required.	0	<b>43</b>	C13 C14	D1
Objective questions exam	Part of the theoretical proof-practical.		41 43 45	B1 C12 C14	
Problem and/or exercise solving	Reports of the seminars			B1 C12 B4	D1
Report of practices, practicum and external practices	Report of the practices	-		B1 C12 B4 C13 C14	D1
Report of practices, practicum and external practices	Reports of the fieldwork		43	B1 C12 B4 B5	D1

## Other comments on the Evaluation

- Attendance at practices, seminars and field trips is mandatory.
- In case of non-attendance at any of the seminars, the corresponding report cannot be submitted.
- -A number of absences of more than 20% in seminars will interrupt the continuous evaluation process.
- -Students who have not attended in their entirety except for justified reasons laboratory practices or field trips, given their clinical/experimental nature, will not be able to opt for the evaluation of these activities. (art. 14 Reg. aval. 2023).
- -In the global evaluation, the final exam -in any of the calls- may include any theoretical and/or practical aspects that

have been explained during the course, both in theoretical classes and in seminars. Practices of a clinical/experimental nature (laboratory practices and field trips) may not be the subject of global evaluation. (art. 14 Reg. aval. 2023).

Evaluation at the first opportunity

To pass the subject by continuous assessment, it will be necessary to reach 40% of the maximum score in seminars, practices and field trips, as a necessary condition to take the objective question exam, which will contribute 35% of the remaining grade.

Second chance evaluation

The exam will have the same characteristics and fulfill the same requirements as **the global assessment of the first opportunity** 

Exam dates and classes can be consulted on the website of the Faculty of Marine Sciences.

Individualized tutoring.

Tutoring schedules of subject teachers can be consulted on the MOOVI platform.

"Responsible and honest behavior is required of the students taking this subject. If any form of fraud (copying or plagiarism) aimed at falsifying the level of knowledge and skills achieved in any type of test is considered inadmissible, report the work. Fraudulent behavior may result in suspension of the subject for an entire course. An internal record of these actions will be kept so that, in case of recidivism, the rector can request the opening of a disciplinary file"

- A2 Students can apply their knowledge and understanding in a manner that indicates a professional approach to their work or vocation, and have competences typically demonstrated through devising and sustaining arguments and solving problems within their field of study
- A3 Students have the ability to gather and interpret relevant data (usually within their field of study) to inform judgments that include reflection on relevant social, scientific or ethical issues
- A4 Students can communicate information, ideas, problems and solutions to both specialist and non-specialist audiences
- B1 Know and use vocabulary, concepts, principles and theories related to oceanography and apply everything learned in a professional and/or research environment.
- B4 Manage, process and interpret the data and information obtained both in the field and in the laboratory.
- B5 Develop, implement and write basic or applied projects in oceanography from a multidisciplinary perspective.
- C13 Acquire the basic sedimentological, geochemical and geophysical techniques and methodologies used in identification, use and sustainability of the natural resources of coastal and marine environmets.
- C14 Know basic concepts and events of global change obtained from geological records.
- D1 Develop the search, analysis and synthesis of information skills oriented to the identification and resolution of problems.
- Understanding the meaning and application of the gender perspective in different fields of knowledge and in professional practice with the aim of achieving a more just and equal society.
- D5 Sustainability and environmental commitment. Equitable, responsible and efficient use of resources.

Methodologies	
	Description
Lecturing	Theoretical contents. Concepts, etc.
Seminars	7 Seminars on subjects related with the Theory: preparation of bibliographic works and exhibition
Studies excursion	Field trip to A Lanzada isthmus for the observation of natural environments and human
	modifications, impacts, management, etc.
Practices through ICT	P1-Legal territorial boundaries
	P2-Evaluation of environmental impact

Personalized assistance				
Methodologies	Description			
Seminars	7 seminars of 2 hours in which the lecturer will enter a subject and the students will work on a questionnaire. All the questions will be solved in the seminars. There will be personal tutorials for the preparation of the oral and written presentations in previously schedulled sesions.			
Lecturing	23 classes of 1 hour. Students will have access to tutorials, mainly in the indicated schedules. It is advisable that the student contact the lecturer by e-mail.			
Practices through ICT	7 hours, in the computer room and/or in cabinet. They will aproach different subjects applied of coastal management, where the students will have to solve problems posed during the practice. The doubts and questions will be addressed during the practice.			
Studies excursion	Field practices on the isthmus of A Lanzada. Attention in the field the day of the field trip.			

Assessment

Practices through ICT Assistance is compulsory.

20 A

D1

**B5** 

To pass the proofs, the students will need to obtain a minimum of 4.5 points on the condition that the global average reaches 5 points.

D3 D5

The students will present the required tests, memoires, etc. the same day at the end of the practice.

#### Other comments on the Evaluation

Date, timeand place of exams will be published in the official web of Marine Sciences Faculty: http://mar.uvigo.es/alumnado/examenes/

The students are required a responsible and honest behaviour. Any form of fraud (i.e. copies and/or plagiarism) directed to alter the level of knowledge or skill reached by the student/to in any type of proof, report or work designed with this purpose is consider inadmissible. The fraudulent behaviours will suppose the suspension of the subject during a complete course. An internal file containing these irregular behaviors will be started, and subsequently the lecturer would be able to request the opening of a disciplinary file in the rectorship.

The global evaluation will be carried out by means of a single test of all the contents of the subject with theoretical questions and practical exercises.

The second chance evaluation will be carried out through specific tests of each one of the failed parts (theory, seminars, practices and field trip).

**Global assessment option:** The application for this evaluation option must be submitted in the time and manner determined by the Center, which will be published prior to the academic start. Given the experimental nature of the practices, attendance at them is mandatory to be eligible for this evaluation option. **Failure to attend the practices, with no justified cause invalidates this possibility, as well as the opportunity for extraordinary evaluation (2nd opportunity).**

General description	This course aims to serve as an introduction to the dyr methodologies used in their assessment and manager		ted populations	and to the basic

Code

- A1 Students have demonstrated knowledge and understanding in a field of study that builds upon their general secondary education, and is typically at a level that, whilst supported by advanced textbooks, includes some aspects that will be informed by knowledge of the forefront of their field of study
- C11 Apply the knowledge and techniques acquired to the characterization and sustainable use of living resources and marine ecosystems.
- D1 Develop the search, analysis and synthesis of information skills oriented to the identification and resolution of problems.
- D5 Sustainability and environmental commitment. Equitable, responsible and efficient use of resources.

Expected results from this subject			
Expected results from this subject	t Training and L		
		Resul	lts
Understand the population processes that affect the dynamics of living resources		C11	D1
			D5
	A1	C11	D1
Understand the basic methods of fisheries resource assessment			
Understand and apply basic methods of fitting mathematical models for parameter estimation,	A1	C11	D1
population dynamics and assessment of marine living resources			D5
	Α1	C11	

Develop skills to use basic fisheries computer programs

Contents	
Topic	
Characterization of marine fisheries resources	Types of resources. Marine areas of interest in the exploitation of resources. Degree of exploitation of marine living resources.
The fishing process	Fishing gears, boats and methods. Selectivity of fishing gears
The unit stock	Population and stock. Population parameters. Characterization of management units. Estimation of abundance of exploited stocks
Reproduction	Maturation and fecundity. Estimation of maturity. Age and size of first maturity. Estimation of fecundity.
Recruitment	Estimation of recruitment. Stock-recruitment relationship. Population dynamics and stock-recruitment relationships.
Age and growth	Concept of cohort. Determination of age. Length-weight relationship. Allometry and isometry. Condition indices. Mathematical expressions of growth. Age-length keys.
Growth parameters	The von Bertalanffy growth model. Estimation of growth parameters: length-frequency analysis, separation of cohorts, size-at-age analysis, length increments analysis. Conversión of length to age.
Mortality	Survivorship curves. Mortality rates. Natural and fishing mortalities. Fishing effort. Capturability. Catch: Catch equations, Catch rates. Estimation of total, natural and fishing mortalities. Estimation of catchability.

Population dynamics and assessment models of fish stocks

Cohort Analysis: Virtual Population Analysis, Pope's Cohort Analysis. Biomass dynamic models. Yield and biomass per recruit models.

Fisheries Management	Biological reference points. Harvest strategies. Harvest tactics. International organizations and resource management.
Methodologies of parameter estimation	Estimation with Excel. Estimation with FiSAT. Application of an agestructured model of harvested populations.

Assessment					
	Description	Qualification	on	Training	and
			Le	earning R	Results
Lecturing	There will be 3 written exams in which the theoretical contents of the subject will be evaluated	70	A1	C11	D1 D5
Laboratory practic	alWritten examination on the contents of the laboratory practices.	5	A1	C11	D1 D5
Practices through ICT	Written examination on the contents of the computer room sessions.	10	A1	C11	D1 D5
Problem solving	Written exam in which the ability to apply the population parameter estimation and evaluation methodologies explained in the theoretical and practical classes will be assessed.	15	A1	C11	D1 D5

#### Other comments on the Evaluation

Students who choose to take the global assessment will not be able to take any test (of any part of the subject), corresponding to continuous assessment, that is done after the date indicated by the Dean's Office to express the type of assessment chosen.

#### 1) Continuous evaluation

The subject will be considered passed if the sum of the scores of the different tests to be taken is equal to or greater than 5 points, otherwise the whole of the Second Opportunity exam will have to be taken.

#### 1.1- Evaluation of the theory

The evaluation of the "master classes" will be carried out in three written exams throughout the course, two of them within the hours of theory of the subject and one on the date of the First Opportunity exam. In each of the first two exams, all the theoretical contents prior to 5 calendar days from the date of the test will be evaluated, whether or not they have been previously evaluated. The first test is worth 2.0 points and the second 3.5. The 3rd exam, to be carried out on the date of the overall evaluation of the First Opportunity, will have a value of 1.5 points and will cover the entire theory.

#### 1.2- Evaluation of Practices

The evaluation of the "Laboratory Practices" will be carried out at the same time as the first exam of the "Lectures". It will have a maximum score of 0.5 points.

The evaluation of the "ICT-supported practices" will be carried out on the date assigned for the final evaluation of the First Opportunity. Its maximum score will be 1.0 points.

## 1.3- Evaluation of Problems

It will be carried out on the date of the First Opportunity final exam. The value of this part of the matter will be 1.5 points.

#### 2) Overall evaluation

It will be carried out through a written exam with three parts: theory (maximum score=7), practices (maximum score=1.5) and problems (maximum score=1.5). The subject will be considered approved if the sum of the scores of the different parts of the exam is equal to or greater than 5 points. In the First Opportunity, only those students who have chosen this type of evaluation at the time will be able to carry it out.

In the Second Opportunity, it can be done by all students who have not passed the subject in the First Opportunity (whether in the continuous or global evaluation modality).

Students are strongly requested to fulfil a honest and responsible behaviour. It is considered completely unacceptable any alteration or fraud (i.e., copy or plagiarism) contributing to modify the level of knowledge and abilities acquired in exams, evaluations, reports or any kind of teacher proposed work. Fraudulent behaviour may cause failing the course for a whole academic year. An internal dossier of these activities will be built and, when reoffending, the university rectorate will be asked to open a disciplinary record

Methodologies	Description
Lecturing	Presentations of the theoretical concepts that allow the students to adquire or improve the skills to perform the analysis of sedimentary basins. This involves the relationship of multidisciplinary theoretical concepts.  The classes will be of 1h.
	It can be possible to get $1$ extra point in the final mark by participation in classroon discussions.
Case studies	Each student will have several real seismic profiles corresponding to a sedimentary basin. They will have to perform the interpretation of each one and to perform a resumen of each practical.
	(Assistance and reports are mandatories, 30% of the mark)
Seminars	The contents of the master sessions will be practiced with different exercises (recognition of sedimentary basins types in different marine contexts, stratigraphic surfaces. (Assistance and reports are mandatories, 30% of the mark)
Presentation	It is mandatory that each student will have to elaborate an individual report explaining the evolution of the basin based on the interpretation of the seismic records worked on in the practicals.  (30% of the mark)

Personalized	assistance

## Other comments on the Evaluation

#### **Continuous assesment option**

The student will be evaluated continuously and based on the delivery of the reports corresponding to the case studies, seminars and practicals in the percentages described. Given the experimental nature of the seminars and practicals, attendance is compulsory.

Attendance and participation in the discussions of the theoretical classes can mean 1 extra point in the final mark.

## **Global assesment option**

The same percentages indicated above will be maintained. However, given the experimental nature of the seminars and practicals, non-attendace without justification invalidates this option, as well as the extraordinary evaluation.

The application for this evaluation option must be submitted in the time and manner determined by the Center, which will be published prior to the academic start.

#### Other considerations

Dates and times for reports will be published in https://mar.uvigo.es/alumnado/asignaturas-y-horarios/

Students are strongly requested to fulfil a honest and responsible behaviour. It is considered completely unacceptable any alteration or fraud (i.e., copy or plagiarism) contributing to modify the level of knowledge and abilities acquired in exams, evaluations, reports or any kind of teacher proposed work. Fraudulent behaviour may cause failing the course for a whole academic year. An internal dossier of these activities will be built and, when reoffending, the university rectorate will be asked to open a disciplinary record.

description	English Friendly subject: International students may request from the teachers:					
	a) resources and bibliographic references in English, b) tutoring sessions in English, c)					
	exams and assessments in English.					

- A1 Students have demonstrated knowledge and understanding in a field of study that builds upon their general secondary education, and is typically at a level that, whilst supported by advanced textbooks, includes some aspects that will be informed by knowledge of the forefront of their field of study
- A2 Students can apply their knowledge and understanding in a manner that indicates a professional approach to their work or vocation, and have competences typically demonstrated through devising and sustaining arguments and solving problems within their field of study
- A3 Students have the ability to gather and interpret relevant data (usually within their field of study) to inform judgments that include reflection on relevant social, scientific or ethical issues
- A4 Students can communicate information, ideas, problems and solutions to both specialist and non-specialist audiences
- A5 Students have developed those learning skills that are necessary for them to continue to undertake further study with a high degree of autonomy
- Plan and execute surveys in the field and laboratory work, applying basic tools and techniques for sampling, data acquisition and analysis in the water column, sea bottom and marine substratum.
- B4 Manage, process and interpret the data and information obtained both in the field and in the laboratory.
- B5 Develop, implement and write basic or applied projects in oceanography from a multidisciplinary perspective.
- C9 Acquire basic knowledge about the structural and functional organization and the evolution of marine organisms.
- C10 Know the biological diversity and functioning of marine ecosystems.
- C11 Apply the knowledge and techniques acquired to the characterization and sustainable use of living resources and marine ecosystems.
- D1 Develop the search, analysis and synthesis of information skills oriented to the identification and resolution of problems.
- D2 Acquire the ability to learn autonomously, continuously and collaboratively, organizing and planning tasks over time.

<sup>\*</sup>The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies	
	Description
Laboratory practical	Lab classes are organized according to the following scheme: at the beginning of each class, the theoretical concepts needed to understand the examples to be observed are briefly explained, and a script is given to the student in which these concepts are remembered, and the techniques to follow and the objectives to be achieved explained.
Seminars	The students must carry out an independent and supervised work that they will expose to their classmates. The work will be done accompanied by the teacher in three seminars, the first will propose the subject and will be directed to the students to seek information on the subject. In the second seminar we will discuss the content found by the students and clarify doubts, and in the third one the presentation will be oriented. The seminars will evaluate the independent work of the students.  The topics of the work will be varied, and subjects suggested by the students are welcome.
Lecturing	In these classes the teacher will present the different topics of the program using different formats according to the subject to be studied, formats that will be: theory, case studies and / or general examples.  The teacher can be supported by audiovisual and computer media, but in general, students do not need to handle them in class.  Attendance to these classes, although is highly recommended for the proper follow-up of the course.

Personalized assista	Personalized assistance		
Methodologies	Description		
Lecturing	During them discussions are held on some of the most relevant topics. Tutoring: Mondays and Wednesdays from 12 to 2. Students willing so could attend personal tutorials to solve doubts and/or uncertainties, which will mainly take place during the timetables indicated. To better optimise the procedure, the student is requested to previously contact his/her teacher with reasonable anticipation.		
Laboratory practical	At the beginning of each practice, the theoretical concepts necessary for the understanding of the specimens to be observed are briefly explained. All issues that are raised during the practice are resolved. Students willing so could attend personal tutorials to solve doubts and/or uncertainties, which will mainly take place during the timetables indicated. To better optimise the procedure, the student is requested to previously contact his/her teacher with reasonable anticipation.		

Seminars	The working groups are chosen and the work topics discussed. They are tracked. A critical review and a general discussion of each work is done. Students willing so could attend personal tutorials to solve doubts and/or uncertainties, which will mainly take place during the timetables indicated. To better optimise the procedure, the student is requested to previously contact his/her teacher with reasonable anticipation.
Tests	Description
Problem and/or exercise solving	The student has to complete and pass very short questions, with four possible answers and chose the correct ones.
Objective questions exam	The studen has to answer short questions in his/her own words, including specific and objective questions and some in the form of sintesis, refection and elabrotaion of well constructed arguments.
Essay questions exam	Here, the students have to develop a long topic, including an important amount of info, but being able to make it in a well explained and siinthetic way in order to offer a whole vision and including the important details of the topics, mainly being these different lyfe ccyles of fishes and invertebrates.

## Other comments on the Evaluation

Parcial tests (laboratory, lecturing, problem solving and objective questions exam) will be conducted during official timetable during the course of the discipline. Lab classes, due to their experimental nature, are mandatory.

**Global assesment option**In the event that the global evaluation option is chosen, as long as the face-to-face requirements mentioned in the experimental activities are met, it will have to be requested during the period that the center stipulates for it, maintaining the % previously described for the different methodologies/tests.

**Extraordinary evaluation (2nd chance)**In the 2nd opportunity exam, another final exam is conducted that will compute in a similar way to the case of the 1st opportunity.

#### Others considerations

Date, time and place of exams (1º & 2º opportunity) will be published in the official web of Marine Sciences Faculty:

## http://mar.uvigo.es/alumnado/examenes/

Students are strongly requested to fulfil a honest and responsible behaviour. It is considered completely unacceptable any alteration or fraud (i.e., copy or plagiarism) contributing to modify the level of knowledge and abilities acquired in exams, evaluations, reports or any kind of teacher proposed work. Fraudulent behaviour may cause failing the course for a whole academic year. An internal dossier of these activities will be built and, when reoffending, the university rectorate will be asked to open a disciplinary record.

Contents		
Topic		

#### 1.-INTRODUCTION To THE Objective

## **TELEDETECTION**

#### 1.1.- Teledetection in Oceanography

1.2.- Brief history of the space observation of the oceans

1.3.- Possibilities for the oceanography

1.4.- Temporary and space scales of the phenomena of interest.

Pretend with this first subject enter to the student in the world of the teledetection and the paper that this plays in the modern oceanography.

## 2.- PHYSICAL PRINCIPLES OF THE Objective

## Contents

## **TELEDETECTION**

In this unit pretends that the student know the

principles of the physics of the electromagnetic radiation, his interaction with the atmosphere and the

as well as the spectral characteristics of the covers.

2.1.- Radiation and electromagnetic spectrum.

2.2.- Terms and units of measure.

2.3.- Principles of the electromagnetic radiation.

2.4.- \*Caractrísticas Spectral of the covers.

2.5.- Interaction of the atmosphere with the radiation.

2.5.1.- Absorption.

2.5.2.- Dispersion.

2.5.3.- Broadcast.

## 3.- ELEMENTS OF A SYSTEM OF Objective

#### TELEDETECTION:

In this unit enters to the student in the characteristics that define to a sensor and space platform and airlifted as well as the steps required from the capture of an image by a sensor until his application and utilisation by part Types of sensors of an user. Finally they describe the most used satellites.

#### Contents:

3.1. System of reception of images

Elements of the system Platform and sensor

Orbits

Resolution of a sensor Platforms \*satelitales and

Photography \*aerea and \*Drones

## 4.- \*ANALISIS And DIGITAL TREATMENT OF Objective

#### Contents:

#### **IMAGES:**

In this unit establish the principles of visual and digital interpretation as well as the processing of 4.2.1. Digital image the information with the object to delete errors (correction), improve some appearance of the information obtained (enhance) or obtain other parameters from the data of radiance (transformations). Finally it will enter to the student in the digital classification and the integration of information in systems of geographic information.

4.1. Visual analysis

4.1.1. Criteria of Interpretation

4.2. Digital treatment

4.2.2. Corrections

4.2.3. It enhance 4.2.4. Transformations

## 5.- APPLICATIONS

#### - Colour of the Ocean

- Temperature

- Poured and Pollution

- Red Tides and Phytoplankton

- Oceanic Circulation

- polar Thaw

- Studies of Choral

- fluvial Feathers

## Aims:

In this last unit enumerate the applications of the teledetection in meteorology and study of the oceans. In each one of these applications makes a description of the physical principles that make it possible, as well as

the interpretation of the results obtained and the sensors used.

## Other comments on the Evaluation

## **Continuous evaluation:**

The realization of works (30%) and his exhibition (10%) can be substituted by a theoretical and practical examination with the percentage sum 40% of the final note. This option will be valued pole professor to surpass the subject. To surpass the subject, demands that the global qualification of each of the modules by separate was not inferior to 4 points. Incidentally, in the case of the work \*tutelado, is necessary that, at least join of the parts (Vectorial Analysis or RásterAnalysis) have an equal or upper qualification to 5 points so that it can do average with the another part, which has to have an equal or upper qualification to the 4 points.

Any Lactures will have compulsory attendance given the practical content of the same. This will notify with sufficient advance

The date, hour and place of realization of the proofs of evaluation, as well as the mandatory activities will be published in the web of Moovi of the subject.

#### **Global evaluation and Extraordinary Announcement:**

The application stop this option of evaluation #have present in the time and form that determine the Centre, that will be published with \*anterioridade to the academic beginning.

Given the experimental character of the activities, the assistance to the same is mandatory for power opt the this option of evaluation.

To no assistance to practices, lectures with compulsory attendance and seminars, without cause justified invalidates this possibility, as well as the opportunity of extraordinary evaluation (2ª opportunity).

So much the practical how the seminars, supervised work and the final evaluation owe to had approved with a 40% of the partial note of each, In case of fail the second opportunity (extraordinary announcement) will realize with an examination of objective questions and an examination of problems with the percentage sum of the no surpassed proofs.

#### Other considerations

It requires of the students that study this subject a responsible behaviour and honest. It considers inadmissible any form of fraud (copy or \*plaxio) aimed at falsifying the level of knowledges and skills reached in all type of proof, report or work. The fraudulent behaviours will be able to suppose suspend the subject during a complete course. It will carry an internal register of these performances so that, in case of recidivism, request the opening to the Rectorship of a disciplinary file

General description	The student will learn how to operate an oceanograph goal, besides the specifics of the simulation code, he/s NetCDF file format and Matlab.			
	This is an English Friendly subject: International students may request from the teachers: a) resources and bibliographic references in English, b) tutoring sessions in English, c) exams and assessments in English.			

- A4 Students can communicate information, ideas, problems and solutions to both specialist and non-specialist audiences
- A5 Students have developed those learning skills that are necessary for them to continue to undertake further study with a high degree of autonomy
- B3 Recognize and implement good practices in measurement and experimentation, and work responsibly and safely both in field surveys and in the laboratory.
- C4 Know, analyze and interpret the physical properties of the ocean according to current theories, as well as to know the most relevant sampling tools and techniques.
- D1 Develop the search, analysis and synthesis of information skills oriented to the identification and resolution of problems.
- D2 Acquire the ability to learn autonomously, continuously and collaboratively, organizing and planning tasks over time.

		ĸ	esuits	
Theoretical and practical knowledge on numerical modelling in oceanography. The student will	A4	В3	C4	D1
have capacity to understand the results of a numerical simulation, in what consists, which are the	A5			D2
necessary forcings, etc. As well as be able to implement a numerical opensource model, to				
simulate the physics and the biogeochemistry.				

Contents	
Topic	
Ocean equations.	Discretization and introduction of the ocean equations in the model.
Matlab.	Basics of Matlab coding (loops, conditional, input and output of data).  Examples.
Numerical integration methods	Implicit and explicit methods. Runge-Kutta, Predictor-Corrector, Leap-Frog, etc.
NetCDF data files.	Structure of a NetCDF file: Global and local attributes, dimensions, data.  Reading and writing of NetCDF files.
The ROMS model.	Introduction. Model input structure. Bathymetry, forcing and boundary condition.
Examples with ROMS.	Run and analysis of simple examples.
Nesting with ROMS.	Nested grids: Why and how. Structure, run and analysis of results.
Biogeochemical models.	Examples with simple biogeochemical models. NPDZ and N2P2Z2D2. The PISCES module.

Methodologies	
	Description
Practices through ICT	Using Linux as the operative system and Matlab as a tool, the student will learn to use the NetCDF data file format and the use of a numerical simulation model.
Lecturing	The equations of the ocean and different methods to solve those equations numerically with a computer code will be introduced to the student.
Seminars	Simple differential equations will be solved numerically, learning basic programming commands and some visualisation tools.

ersonalized assistance		
Methodologies	Description	
Lecturing	Students willing so could attend personal tutorials to solve doubts and/or uncertainties, which will mainly take place during the timetables indicated. To better optimise the procedure, the student is requested to previously contact his/her teacher with reasonable anticipation	
Practices through IC	T Will be adapted to the timeframe determined by the Faculty's dean.	
Seminars	The students will implement different programming codes to solve differential equations. The fulfillment of the aims fixed in the seminars will be evaluated.	
Tests	Description	
Presentation	The final work will be presented to all the other students and the teacher.	

	Description	Qualification	Tra	aining a	nd
				ning Re	
Practices through ICT	The consecution of different goals (preparation of the input data, run of the model, preparation of graphics with the results, etc) will be evaluated following a previously informed rubric and/or a test.	20	Е	33	D2
Seminars	Evaluarase a destreza en desenrrolo de distinto código computacional (integración numérica de ecuaciones diferenciais sinxelas, código de visualización, etc).	40	A5		D1 D2

## Other comments on the Evaluation

### Global evaluation option.

In the case to opt by global evaluation, the student have to request it in the period and form marked by centre, that will be published previous to the start of the course. The proofs will take place the same official testing date, having more time for his development.

## Extraordinary evaluation (2nd opportunity)

There will be the possibility of a standalone proof, in the form of a presentation of the work done, or to recover individually each one of the three sections of the first opportunity, with the same evaluation criteria.

## **Ethic Commitment**

It requires of the students that \*curse this matter a responsible and honest behaviour. It considers inadmissible any form of fraud (copy or plagiarism) directed to \*falsear the level of knowledges and skills reached in all type of proof, report or work. The fraudulent behaviours \*podrÃ\*n suppose suspend the subject during a complete course. Carryà an internal register of these performances so that, in case of \*reincidencia, request the opening to the rectorship of a disciplinary file

The date, hour and place of the proofs will be published in the Faculty's official webpage:

http://mar.uvigo.es/alumnado/examenes

The Microbiology module will deal with aspects related aquaculture and the biotechnological potential of materials.	ion for better man animals in all the relationships: an	nagement and ex eir manifestation atomy, morpholo	xploitation of resources. s and the adaptations of ogy, biology,

Code

- A1 Students have demonstrated knowledge and understanding in a field of study that builds upon their general secondary education, and is typically at a level that, whilst supported by advanced textbooks, includes some aspects that will be informed by knowledge of the forefront of their field of study
- A2 Students can apply their knowledge and understanding in a manner that indicates a professional approach to their work or vocation, and have competences typically demonstrated through devising and sustaining arguments and solving problems within their field of study
- A3 Students have the ability to gather and interpret relevant data (usually within their field of study) to inform judgments that include reflection on relevant social, scientific or ethical issues
- A4 Students can communicate information, ideas, problems and solutions to both specialist and non-specialist audiences
- B1 Know and use vocabulary, concepts, principles and theories related to oceanography and apply everything learned in a professional and/or research environment.
- B4 Manage, process and interpret the data and information obtained both in the field and in the laboratory.
- C9 Acquire basic knowledge about the structural and functional organization and the evolution of marine organisms.
- C10 Know the biological diversity and functioning of marine ecosystems.
- C11 Apply the knowledge and techniques acquired to the characterization and sustainable use of living resources and marine ecosystems.
- D1 Develop the search, analysis and synthesis of information skills oriented to the identification and resolution of problems.
- D2 Acquire the ability to learn autonomously, continuously and collaboratively, organizing and planning tasks over time.
- D5 Sustainability and environmental commitment. Equitable, responsible and efficient use of resources.

#### Contents

Topic	
BLOCK I. INTRODUCTION AND GENERAL CONCEPTS	I.1. Parasitology and Marine Parasitology. Concept of parasitism.  Adaptations to the parasitism. Actions of the parasite on the host. Parasite
	specificity. Parasites and biological cycles.
DI OCIVIII PROTOZOA	I.2.Ecological terms in Parasitology.
BLOCK II. PROTOZOA	II.1. Introduction to the study of the Protozoa parasites. Classification
	Protozoa.
	II.2. Dinoflagellates. Flagellates. Amoebae. Apicomplexa. Ciliates.
	II.3. Microsporidia.
	II.4. Myxosporidia.
DI OCIVIII LIEI MINITUS AND ARTURORORS	II.5. Protozoa of bivalve molluscs: Perkinsus, Haplosporidia, Marteilia.
BLOCK III. HELMINTHS AND ARTHROPODS	III.1. Plathelminths: Monogenea. Digenea. Cestoda. Turbellaria.
	III.2. Nemathelminths: Nematoda. Acanthocephala.
DI OCK IV. APPLICATIONS OF THE MARINE	III.3. Crustacea.
BLOCK IV. APPLICATIONS OF THE MARINE	IV.1. The parasites as biological markers.
PARASITOLOGY	IV.2. Applications of the parasites in the control of the fisheries: His
	employment in the differentiation of stocks.
	IV.3. Economic and hygienic importance of the marine parasites.
BLOCK V. MICROBIAL POLLUTION IN THE MARINE	V.1. Types of pollutants biological that access to the marine aquatic
ENVIRONMENT	environment.
	V.2. Causes and consequences of the biological pollution in coastal waters.
	V.3. Control and Monitoring of the biological pollution in coastal waters.
	V.4. Methods of quantification of Microorganisms indicators in waters and
DI OCIVATI INFECTIONS ISTICINATINO COV	foods of marine origin.
BLOCK VI. INFECTIOUS ICTIOPATHOLOGY:	VI.1. Host-pathogen environment interaction.
PROCARIOTS and VIRUSES	VI.2. Pathogenicity and virulence factors.
	VI.3. Main pathogens in aquaculture and mariculture.
	VI.4. Microbiological diagnosis.
	VI.5. Prevention and treatment. Antibiotherapy. Alternative methods.
DI GOLLANI DI GERMANI DE CANADA DE C	Immunostimulation.
BLOCK VII. BIOTECHNOLOGICAL POTENTIAL OF	VII.1. Bioactive compounds of marine origin.
THE MARINE MICROBIOTA	VII.2. Molecular techniques applied to bioprospecting.
	VII.3. Bioremediation of marine pollutants.
	VII.4. Biofouling: Microbial process and antifouling treatments.

	Class hours	Hours outside the classroom	Total hours
Lecturing	20	30	50
Laboratory practical	20	50	70
Seminars	10	20	30

Methodologies	
	Description
Lecturing	The teachers of the subject structure and/or explain the objectives and contents of each block. For their study, students have at their disposal the presentations seen in class and support cards for each topic, in the Moovi platform.
Laboratory practical	Their completion is mandatory in order to pass the subject. In them, the teacher gives an explanation of the theoretical foundations and protocols of the practices, supervising their execution and solving the doubts that the students may have.  The practices will deal with useful techniques in the practice of the profession.
Seminars	Their realization is mandatory. In them, topics related to the theory and practices of the subject are discussed, elaborated and presented (individually or in groups). Topics will be proposed to be prepared by the students.

Personalized assis	Personalized assistance		
Methodologies	Description		
Lecturing	Any doubts that students may have will be answered in class or during tutoring hours. The student will be able to attend personalized tutorials to solve doubts, mainly in the schedules that are indicated and arranging an appointment with the professors previously, by e-mail.		
Laboratory practical They will be participative and will allow to establish personalized reinforcement actions. Durin realization of the laboratory practices the teachers will give individualized attention to each st for the correct understanding of the experimental objectives and of the methodology or technused.			

Elaboration and exposition by groups of students of topics related to the theory and practices of the subject. The student will be able to attend personalized tutorials to solve doubts, mainly in the schedules that are indicated and arranging appointment with the professors previously, by e-mail.

	(Parasitology 10%; Microbiology 10%).					D5

## Other comments on the Evaluation

To pass the subject it will be necessary:

- A) In continuous evaluation:
- 1) To attend the practices and seminars of the two modules of the subject.
- 2) Obtain a minimum grade of 5 points out of 10 in each of the activities (Theory, Practicals and Seminars) of the two modules that compose it. A minimum grade of 4 points will be admitted in a single activity for each module, as long as the final average of the subject equals or exceeds 5 points. If the subject is not passed in its entirety, the highest grade of the activities not passed will be reflected in the final grade.

In the second call: The grades of the tests passed in the first call will be kept for the second call, evaluating the students of the activities not passed.

- B) In global evaluation:
- 1. The student will request it within the period established by the center.
- 2. The student will not be able to request the global evaluation if he/she has not carried out the practices and seminars of the subject whose attendance is obligatory.
- 3. Both in the first and in the second call, students who choose this type of evaluation will be evaluated of all the contents of the subject, having to obtain to pass the subject a minimum grade of 5 points out of 10 in each of the modules.

Students who take this subject are required to behave responsibly and honestly. Any form of fraud (copying and/or plagiarism) aimed at falsifying the level of knowledge and skills achieved in any type of test, report or work is considered inadmissible. Fraudulent conduct may result in the student being suspended from the course for a full academic year. An internal record of these actions will be kept so that, in case of recurrence, a disciplinary file may be requested from the rector's office.

The date, time and place of the evaluation tests will be published on the official website of the Faculty of Marine Sciences: http://mar.uvigo.es/alumnado/examenes

Methodologies	
	Description
Lecturing	The professor will present the conceptual basis of each subject and the strategies of the corresponding calculation process. The student will apprehend such concepts by means of the bibliographic query and daily exercises.
Practices through ICT	The students will analyse the experimental data of their previous practices in the laboratory, using specific software and on-line servers.
Laboratory practical	The educational guide of the practices will allow to develop several experiments for the genetic traceability of marine products and genotyping the populations for the calculation of the structure of fisheries.
Seminars	Students will solve out practical cases in the classroom, which are associated to each theoretical concept, analytical technique or biological situation of marine genetic resources.

Personalized assistance				
Methodologies	Description			
Practices through ICT	There will be a personalised attention according to the needs of each student			

Lecturing	The questions or synchronous explanations are part of the participatory class.
Laboratory practical	The personalised guide will apply according to the needs of each student.
Seminars	Seminars allow to identifying the understanding or executive difficulties of each student in real time.
Tests	Description
Problem and/or exercise solving	The face-to-face virtual tutorship will be held syncronously or asyncronously, by email and by the virtual classroom of remote campus UVIGO, respectively.
Report of practices, practicum and external practices	A predesigned protocol will be presented during the lab. practices for the preparation of the final report.
Presentation	The rules of an efficient presentation will be discussed in order to work out an outstanding dissemination of the practical case assigned to each student.
Debate	

Assessment						
	Description	Qualification			ning a	
Problem and/or exercise solving	Daily execution of exercises from each class, for its conceptual apprehension; consists on problems, multiple questions or practical cases with simple mathematical applications.	20	A3	B2 B3	C9 C11	D2

Debate	Active participation in classes, seminars and practices, with reasoning and scientific and ethical position on the exploitation of living marine resources.		A1 A3	B1	C10	D5

## Other comments on the Evaluation

**Continuous evaluation option (regular):** the contents taught in the master classes and in the experimental and computer practices, will be evaluated respectively through the daily resolution of homework (electronic correction), the execution and attitude towards the practices (performance face-to-face), the final report of the practices (memory correction) and the oral defense of the practical case (on the established day of the last problems seminar). In addition, an exam of objective questions is proposed for all students with a weight of 30% of the final grade.

**Global assessment option:** for those students who were unable to follow the subject daily in person for personal or work reasons, an extraordinary written test will be given, coinciding on the date and place with the regular continuous assessment written exam. Given the experimental nature of the practices, attendance at them is mandatory to be eligible for this evaluation option.

**Extraordinary evaluation option (2nd opportunity):** it is carried out on the second date of July of the academic year and its requirements do not differ from the continuous evaluation or the global evaluation, that is, it is necessary to previously carry out the practices and they are maintained. the marks of the continuous evaluation obtained during the course, except those of the written exam of the first call.

The date, time and place of the evaluation tests will be published on the official website of the Faculty of Marine Sciences: http://mar.uvigo.es/alumnado/examenes/

## Other comments

The students immatriculated in this subject would need to have previous knowledge on the nature of the hereditary material (DNA), i.e. structure, transmission rules and evolution, tackled in the subject Biology of the first course of the Degree. It is advisable to account for basic knowledge of calculation of probabilities, proofs of significance (e.g. the test of chi-square), and the concepts and calculations of regression and analysis of variance. The dynamics of fisheries and the marine biological cycles, are as well essential to understand the connectivity of the exploited fishery stocks.

uescription	English Friendly subject: International students may range a) resources and bibliographic references in English, exams and assessments in English.			)

Code

- Students can apply their knowledge and understanding in a manner that indicates a professional approach to their work or vocation, and have competences typically demonstrated through devising and sustaining arguments and solving problems within their field of study
- Students have the ability to gather and interpret relevant data (usually within their field of study) to inform judgments that include reflection on relevant social, scientific or ethical issues
- Students can communicate information, ideas, problems and solutions to both specialist and non-specialist audiences
- Students have developed those learning skills that are necessary for them to continue to undertake further study with a high degree of autonomy
- Know and use vocabulary, concepts, principles and theories related to oceanography and apply everything learned in a professional and/or research environment.
- Plan and execute surveys in the field and laboratory work, applying basic tools and techniques for sampling, data acquisition and analysis in the water column, sea bottom and marine substratum.
- Recognize and implement good practices in measurement and experimentation, and work responsibly and safely both in field surveys and in the laboratory.
- Manage, process and interpret the data and information obtained both in the field and in the laboratory.
- Develop, implement and write basic or applied projects in oceanography from a multidisciplinary perspective.
- know at a general level the fundamental principles of sciences: Mathematics, Physics, Chemistry, Biology and Geology. <u>C1</u>
- Know, analyze and interpret the physical properties of the ocean according to current theories, as well as to know the most relevant sampling tools and techniques.
- Develop the search, analysis and synthesis of information skills oriented to the identification and resolution of problems.
- Acquire the ability to learn autonomously, continuously and collaboratively, organizing and planning tasks over time.

## Contents

**TELEDETECTION** 

Topic

1.-INTRODUCTION To THE Objective

1.1.- Teledetection in Oceanography

1.2.- Brief history of the space observation of the oceans

1.3.- Possibilities for the oceanography

1.4.- Temporary and space scales of the phenomena of interest.

Pretend with this first subject enter to the student in the world of the teledetection and the paper that this plays in the modern oceanography.

### 2.- PHYSICAL PRINCIPLES OF THE Objective

#### **TELEDETECTION**

In this unit pretends that the student know the principles

of the physics of the electromagnetic radiation, his interaction with the atmosphere and the ocean.

as well as the spectral characteristics of the covers.

#### Contents

- 2.1.- Radiation and electromagnetic spectrum.
- 2.2.- Terms and units of measure.
- 2.3.- Principles of the electromagnetic radiation.
- 2.4.- \*Caractrísticas Spectral of the covers.
- 2.5.- Interaction of the atmosphere with the radiation.
- 2.5.1.- Absorption.
- 2.5.2.- Dispersion.
- 2.5.3.- Broadcast

## 3.- ELEMENTS OF A SYSTEM OF Objective

## **TELEDETECTION:**

In this unit enters to the student in the characteristics that define to a sensor and space platform and airlifted as well as the steps required from the capture of an image by a sensor until his application and utilisation by part Types of sensors of an user. Finally they describe the most used satellites.

## Contents:

3.1. System of reception of images

Elements of the system Platform and sensor Orhits

Resolution of a sensor

Platforms \*satelitales and

airlifted.

Photography \*aerea and \*Drones

## 4.- \*ANALISIS And DIGITAL TREATMENT OF Objective

#### IMAGES:

In this unit establish the principles of visual and digital interpretation as well as the processing of 4.2.1. Digital image the information with the object to delete errors (correction), improve some appearance of the information obtained (enhance) or obtain other parameters from the data of radiance (transformations). Finally it will enter to the student in the digital classification and the integration of information in systems of

### Contents:

- 4.1. Visual analysis
- 4.1.1. Criteria of Interpretation
- 4.2. Digital treatment
- 4.2.2. Corrections
- 4.2.3. It enhance 4.2.4. Transformations

### 5.- APPLICATIONS

## - Colour of the Ocean

geographic information.

- Temperature
- Poured and Pollution
- Red Tides and Phytoplankton
- Oceanic Circulation
- polar Thaw
- Studies of Choral
- fluvial Feathers

### Aims:

In this last unit enumerate the applications of the teledetection in meteorology and study of the oceans. In each one of these applications makes a description of the physical principles that make it possible, as well as

the interpretation of the results obtained and the sensors used.

## Other comments on the Evaluation

## **Continuous evaluation:**

The realisation of works (30%) and his exhibition (10%) can be substituted by a theoretical and practical examination with the great percentage \*d 40% of the final note. This option will be valued by the professor to surpass the subject. Some masterclasses will have \*caracter \*obigatorio given the practical content of the same. This will notify with sufficient \*antelación through the web \*Moovi to the students enrolled.

The date, hour and place of realisation of the proofs of evaluation, as well as the compulsory activities will be published in the web of \*moovi of the subject.

## **Global evaluation and Extraordinary Announcement:**

The application for this option of evaluation will have to present in the time and form that determine the Centre, that will be published prior to the academic start.

Given the experimental character of the activities, the assistance to the same is compulsory to be able to opt

to this option of evaluation.

The no assistance to practices, classes \*obliatorias and seminars, without cause justified invalidates this possibility, as well as the opportunity of extraordinary evaluation (2ª opportunity).

So much the practices like the seminars, work \*tutelado and the final evaluation have to have approved with 40% of the partial note of each one.&\*nbsp; In case of suspense the second opportunity (extraordinary announcement) will make with an examination of objective questions and an examination of problems with the percentage adds of the no surpassed proofs.

Other considerations

Requires of the students that \*curse this matter a responsible and honest behaviour. It considers inadmissible any form of fraud (copy or plagiarism) directed to \*falsear the level of knowledges and skills reached in all type of proof, report or work. The fraudulent behaviours will be able to suppose suspend the subject during a complete course. It will carry an internal register of these performances so that, in case of \*reincidencia, request the opening to the rectorship of a disciplinary file

The external academic practices constitute an activity of formative nature realised by the university students and supervised by the Universities, whose aim is to allow to the same reinforce and complement the knowledges obtained ein his academic training, favouring the acquisition of capacities in view to prepare them for the exercise of professional activities (BOE 297, 10 December 2010).

## **Training and Learning Results**

Code

- A1 Students have demonstrated knowledge and understanding in a field of study that builds upon their general secondary education, and is typically at a level that, whilst supported by advanced textbooks, includes some aspects that will be informed by knowledge of the forefront of their field of study
- A2 Students can apply their knowledge and understanding in a manner that indicates a professional approach to their work or vocation, and have competences typically demonstrated through devising and sustaining arguments and solving problems within their field of study
- A3 Students have the ability to gather and interpret relevant data (usually within their field of study) to inform judgments that include reflection on relevant social, scientific or ethical issues
- A4 Students can communicate information, ideas, problems and solutions to both specialist and non-specialist audiences
- A5 Students have developed those learning skills that are necessary for them to continue to undertake further study with a high degree of autonomy
- B1 Know and use vocabulary, concepts, principles and theories related to oceanography and apply everything learned in a professional and/or research environment.
- Plan and execute surveys in the field and laboratory work, applying basic tools and techniques for sampling, data acquisition and analysis in the water column, sea bottom and marine substratum.
- B3 Recognize and implement good practices in measurement and experimentation, and work responsibly and safely both in field surveys and in the laboratory.
- B4 Manage, process and interpret the data and information obtained both in the field and in the laboratory.
- B5 Develop, implement and write basic or applied projects in oceanography from a multidisciplinary perspective.
- C1 know at a general level the fundamental principles of sciences: Mathematics, Physics, Chemistry, Biology and Geology.
- C2 Acquire basic knowledge of mathematics (differential and integral calculation) and statistics.
- C3 Describe how works the global ocean circulation, its forcings and its climate implications.
- C4 Know, analyze and interpret the physical properties of the ocean according to current theories, as well as to know the most relevant sampling tools and techniques.
- C5 Formulate the mass, energy and moment conservation equations for geophysical fluids and solve them in basic oceanic processes.
- C6 Acquire the fundamentals and terminology of chemical processes.
- C7 Apply to the marine and coastal environment the principles and methods used in Chemistry.
- C8 Know the main pollutants, their causes and effects in the marine and coastal environment.
- C9 Acquire basic knowledge about the structural and functional organization and the evolution of marine organisms.
- C10 Know the biological diversity and functioning of marine ecosystems.
- C11 Apply the knowledge and techniques acquired to the characterization and sustainable use of living resources and marine ecosystems.
- C12 Acquire knowledge about processes and products related to internal and external geological cycles.
- C13 Acquire the basic sedimentological, geochemical and geophysical techniques and methodologies used in identification, use and sustainability of the natural resources of coastal and marine environmets.
- C14 Know basic concepts and events of global change obtained from geological records.
- D1 Develop the search, analysis and synthesis of information skills oriented to the identification and resolution of problems.

- D2 Acquire the ability to learn autonomously, continuously and collaboratively, organizing and planning tasks over time.
- D3 Understanding the meaning and application of the gender perspective in different fields of knowledge and in professional practice with the aim of achieving a more just and equal society.
- D4 Ability to communicate orally and in writing in Galician language.
- D5 Sustainability and environmental commitment. Equitable, responsible and efficient use of resources.

## Contents

Topic

The contents of the external academic practices have to otain the following objectives:

- a) Contribute to the integral training of the students complementing his theoretical and practical learning.
- b) Facilitate the knowledge of the methodology of work adapted to the professional reality in that the students will have to operate, contrasting and applying the knowledges obtained.
- c) Stimulate the development of technical capacities, methodological, personal and participatory.
- d) Obtain a practical experience that facilitate the insertion in the market of work and improve his future employability.
- e) Favour the values of the innovation, the creativity and the ventures.

Planning			
	Class hours	Hours outside the classroom	Total hours
Practicum, External practices and clinical practices	150	0	150

Methodologies	
	Description
Practicum, External practices and clinical practices	The formative project in that it concretises the realisation of each external academic practice will have to fix the educational aims and the activities to develop.  The aims will establish considering the basic capacities, generic and/or specific that it has to be obtained by the student.

Personalized assistance				
Methodologies	Description			
Practicum, External practices and clinical practices	Students willing so could attend personal tutorials to solve doubts and/or uncertainties, which will mainly take place during the timetables indicated. To better optimise the procedure, the student is requested to previously contact his/her teacher with reasonable anticipation.			

Assessment	
Description	Qualification Training and Learning
	Results

Practicum. and clinical practices

The advisor of the collaborator entity will realise and will send to the academic External practices advisor of the university a final report, to the conclusion of the practices, that will collect the number of hours realised by the student and in which it will be able to value the different appearances referred so much to the generic competitions how to the specific, foreseen in the corresponding formative project.

100

The student will elaborate and will do delivery to the academic tutor of the University a final memory (1-2 pages), to the conclusion of the practices with the seen well of the tutor of the company.

The academic advisor will evaluate the practices developed, according to the reports of the student and of the advisor of the Company, filling the corresponding report of assessment with the final note.

## Other comments on the Evaluation

All the procedure can find in the BOE number 297 (10/11/2010) and in the guideline of External Practices of the Marine Sciences Faculty.

Students are strongly requested to fulfil a honest and responsible behaviour. It is considered completely unacceptable any alteration or fraud (i.e., copy or plagiarism) contributing to modify the level of knowledge and abilities acquired in exams, evaluations, reports or any kind of teacher sproposed work. Fraudulent behaviour may cause failing the course for a whole academic year. An internal dossier of these activities will be built and, when reoffending, the university rectorate will be asked to open a disciplinary record. The evaluation will be carried out taking into account all the Tutors' reports and the student's personal report.

Sources of information

**Basic Bibliography** 

Complementary Bibliography

### Recommendations

#### Other comments

It is very important to follow the instructions of the Tutor of the Company, realise all the activities that are requested to the student.

Adopt an attitude of collaboration in all the tasks entrusted from the start of the practice.

and for the evaluation						

## Other comments on the Evaluation

The final degree project is governed by the rule approved in the Marine Science Faculty, which is published in the web page of the centre (http://mar.uvigo.es/alumnado/trabajo-fin-de-grado/).

The Academic Commission of the final degree project, prior to the start of the work, will make public the criteria of evaluation that will use so much the tutor to issue his report like the court to evaluate the memory of the work and his defence.

They will make public in the web page all the terms that reach the presentation of the memories, the defences and the presentation of the reports by the tutors. These terms will be approved by the Academic Commission of the final degree project. In case that the student surpass the evaluation of the Tutor and do not surpass the court of evaluation will issue a justificative report. Once attended the recommendations of the report, said student will be able to go back to present the final degree project in the following period of evaluation.

Students are strongly requested to fulfil a honest and responsible behaviour. It is considered completely unacceptable any alteration or fraud (i.e., copy or plagiarism) contributing to modify the level of knowledge and abilities acquired in exams, evaluations, reports or any kind of teacher proposed work. Fraudulent behaviour may cause failing the course for a whole academic year. An internal dossier of these activities will be built and, when reoffending, the university rectorate will be asked to open a disciplinary record

#### Recommendations

## Other comments

As in all subjects, personal effort is essential, as well as attending to the instructions of the tutor and delivering the report in the deanery within the deadlines set by the Academic Committee of TFG.

It is recommended to read carefully the regulations related to the elaboration and defense of TFG of the Center and all the related documentation that can be found in
