General description	Study of the main physical processes, paying atte	ention to their time ar	nd spatial scales	

## Competencies

Code

- A2 Students who can apply their knowledge and understanding, and problem solving abilities in new or unfamiliar environments within broader (or multidisciplinary) contexts related to their field of study
- A4 Students who can communicate their conclusions, and the knowledge and rationale underpinning these, to specialist and nonspecialist audiences clearly and unambiguously
- B1 The students will understand in a detailed and based form the theoretical and practical aspects and the work methodology of the oceanography
- B4 The students will be able to analyse oceanographic databases and obtain skills for their treatment.
- C1 The students will be able to obtain advanced and relevant knowledge, of skilled and multidisciplinary character, in the field of the oceanography and their application to the marine environment
- C3 The students will analyse situations and specific oceanographic conditions related with the global change
- D1 The students will know and will be able to apply the scientific method in the academic and research fields.
- D3 The students will be able to communicate the obtained information and their conclusions in a effective way to the general public, to other scientists and to the competent authorities, listening and answering of effective form and, using an appropriate language to the audience and to the context

Learning outcomes	
Expected results from this subject	Training and Learning Results
To deep understand of the physical processes that occur in the ocean	A2
	A4
	B1
	B4
	C1
	C3
	D1
	D3
To adquire understanding about the different spatial and time scales.	A2
	C1
To adquire understanding about the effects of the coastal boundaries in those processes.	B1
	C1
To achieve the skill of analyze experimental data by means of low level languages.	A2
	C1
	C3
	D3

## Other comments on the Evaluation

Students are strongly requested to fulfil a honest and responsible behaviour. It is considered completely unacceptable any alteration or fraud (i.e., copy or plagiarism) contributing to modify the level of knowledge and abilities acquired in exams, evaluations, reports or any kind of teacher proposed work. Fraudulent behaviour may cause failing the course for a whole academic year. An internal dossier of these activities will be built and, when reoffending, the university rectorate will be asked to open a disciplinary record

## Sources of information

## **Basic Bibliography**

POND, S., G.L.PICKARD, Introductory Dynamical Oceanography, Pergamon Press,

CUSHMAN-ROISIN, B., Introduction to Geophysical Fluid Dynamics, Ray Henderson & Deirde Cavanaugh,

## **Complementary Bibliography**

Benoit Cushman-Roisin, Jean-Marie Beckers, INTRODUCTION TO GEOPHYSICAL FLUID DYNAMICS. Physical and Numerical Aspects, ACADEMIC PRESS,

## Recommendations

## Subjects that continue the syllabus

Atmosphere-Ocean Interaction/V10M153V01207

Climate Models/V10M153V01205

## Subjects that it is recommended to have taken before

Physical Oceanography/V10M153V01CF101

#### Other comments

If any student did not come from Marine Science studies, the previous study of the matter "Physical Oceanography" is strongly recommended.

## **Contingency plan**

#### **Description**

#### === EXCEPTIONAL PLANNING ===

Given the uncertain and unpredictable evolution of the health alert caused by COVID-19, the University of Vigo establishes an extraordinary planning that will be activated when the administrations and the institution itself determine it, considering safety, health and responsibility criteria both in distance and blended learning. These already planned measures guarantee, at the required time, the development of teaching in a more agile and effective way, as it is known in advance (or well in advance) by the students and teachers through the standardized tool.

=== ADAPTATION OF THE METHODOLOGIES ===

\* Teaching methodologies maintained

All methodologies would be maintained.

\* Teaching methodologies modified

In the case of on line teaching, two resources will be set up, the remote campus https://campusremoto.tv.uvigo.es/ and the on line teaching platform https://faitic.uvigo.es/, as well as other resorts that will help students to access to the contents of the matter.

\* Non-attendance mechanisms for student attention (tutoring)

Personal attention will be arranged through the virtual office 2308 (Gabriel Rosón). Password: SeguroqueaprueboOF1 , as well as via email, only through the institutional student domain @alumnos.uvigo.es. Emails send via non institutional domain will not answered.

Tutoring schedule will be increased from monday to friday from 10 to 18 h.

\* Modifications (if applicable) of the contents

Not applicable

\* Additional bibliography to facilitate self-learning

In order to make learning easier, all additional bibliography will be uploaded in the online plattform faitic if neccesary.

\* Other modifications Not applicable

=== ADAPTATION OF THE TESTS ===

\* Tests already carried out

Test XX: [Previous Weight 00%] [Proposed Weight 00%]

Not applicable

\* Pending tests that are maintained

Test XX: [Previous Weight 00%] [Proposed Weight 00%]

Not applicable

\* New tests

Not applicable

\* Additional Information

In this unusual situation, students are required to face this matter with a responsible and honest behaviour.

## === EXCEPTIONAL MEASURES SCHEDULED ===

In front of the uncertain and unpredictable evolution of the sanitary alert caused by the \*COVID-19, the University of Vigo establishes an extraordinary planning that will activate in the moment in that the administrations and the own institution determine it attending to criteria of security, health and responsibility, and guaranteeing the teaching in a no face-to-face stage or partially face-to-face. These already scheduled measures guarantee, in the moment that was prescriptive, the development of the teaching of a more agile and effective way when being known in advance (or with a wide \*antelación) by the students and the \*profesorado through the tool normalised and institutionalised of the educational guides.

### === ADAPTATION OF THE METHODOLOGIES ===

In case that the modality of teaching was no face-to-face or mixed, will use the Remote Campus to give classes and seminars, as well as to solve problems and supervise the students, and for the presentation of the mentored projects.

\*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies	
	Description
Project based learning	It consists in the exhibition of contents by part of the professor, analysis of competitions, explanation and demonstration of capacities, skills and knowledges in the classroom, using like methodology to participatory masterclass and in which the function of the professor is to explain the theoretical foundations of the distinct matters.

Seminars	Sessions of groupal work oriented by the professor, whose purpose is the research of data or information in libraries, databases, internet, etc. The professor indicates the need of extension of knowledges and orients in the research. This methodology carries implicit a load of work no face-to-face significant that it will have to be quantified in the programming of each matter, matter or module.
Practices through ICT	Session of groupal work for the resolution of problems in the classroom of computing, supervised by the professor. Significant construction of the knowledge through the interaction and activity of the student.
Laboratory practical	Activities developed in spaces and with specialized equipments that improve the significant construction of the knowledge through the interaction and activity of the student. It is carried out at the laboratory and the function of the professor is to present the aims, orient the work and realise the follow-up of the student.
Mentored work	Realisation in group of a work on a subject of the matter with participation shared. The professor presents the aims, orients and tutorizes the work, with participation shared with the students.
Presentation	Exhibition in group of the tutored work.
Seminars	Significant construction of the knowledge through the interaction between tutor and student by means of sessions of tutorial activities personalised or in group very reduced, where the professor orients and resolves doubts.

#### Description

=== EXCEPTIONAL PLANNED MEASURES ===

In the face of the uncertain and unpredictable evolution of the health alert triggered by COVID-19, the University establishes an extraordinary planning that will be activated when the administrations and the institution itself determine it based on safety criteria, health and responsibility, and ensuring teaching in a non face-to-face or non face-to-face setting. These already planned measures guarantee, when it is mandatory, the development of teaching in a more agile and effective way to be known in advance (or with a long advance) by pupils and teachers through the standardised and institutionalised tool of the DOCNET teaching guides.

=== ADAPTATION OF METHODOLOGIES ===

Not applicable

- \* Teaching methodologies to be modified
- Laboratory practice

Laboratory practices that cannot be done in face-to-face mode will be done in the form of a simulation through the virtual classroom (Remote Campus) that the University of Vigo has the disposition of teachers and students. After the virtual classroom session, they will have to present the corresponding report according to the criteria and indications of the trainee teachers.

- Introductory activities:
- Master Lesson: The

The sessions of these activities that cannot be done in person, will be carried out through the virtual classroom that the University of Vigo has the disposition of teachers and students.

\* Off-site student care (tutoring)

Students can consult their questions by appointment in the teacher s virtual office: Room 1752, access code coDC4elw

On the TEMA platform is enabled the Forums section, where a forum will be open for each classroom topic taught, as well as several forums for laboratory practices, problem classes and seminars. In this way, students will be able to ask questions that can be answered by both teachers and/or classmates/classmates.

- \* Modifications (if applicable) of the contents to be imparted
- \* Additional bibliography to facilitate self-learning

Websites and related videos will be used to complement the training of students, which will be made available to students on the TEMA platform.

\* Other amendments

## === ADAPTATION OF THE EVALUATION ===

\* Tests already carried out

Test \*XX: [Previous Weight 00%] [Proposed Weight 00%]

Not applicable

\* Evidence pending and ongoing Test \*XX: [Previous Weight 00%] [Proposed Weight 00%]

- Practice report
- Work
- Problem solving and exercises

Does not change the weighting in the final note

\* Tests to be modified [Previous test] => [New test]

Not applicable

- \* New evidence
- \* Additional information

General	This subject tackles the knowledge of the geological pro			
description	of coast until the abyssal plain. They will analyse the pr			
	movement of sediment and the sedimentary structures			
	tackles the sismoestratigraphical interpretation, like too	ol for the interpr	etation of seque	nces and geological
	cycles in the differents sedimentary environments.			
	The practical content of the subject will consist in a field	d trip of several	days of length to	see different ancient
	sedimentary environments. It proposes visit the neoger	basins of Sorba	s; Nijar and Tab	ernas in the province of
	Almería for the characterisation in situ of the lithology,	the facies and th	ne sedimentary a	architecture of a wide
	variety of environments (alluvial fans, beaches, deltas,	reefs, carbonati	c shelfs, evapori	es, slumps, debris flows,
	turbidites, pelagic), as well as the sedimentary processed	es and tectonic t	hat have contro	lled his origin and
	space-temporary evolution .			

## Competencies

Code

- A3 Students who have the ability to integrate knowledge and handle complexity, and formulate judgments with incomplete or limited information, but that include reflecting on social and ethical responsibilities linked to the application of their knowledge and judgments
- A4 Students who can communicate their conclusions, and the knowledge and rationale underpinning these, to specialist and nonspecialist audiences clearly and unambiguously
- B1 The students will understand in a detailed and based form the theoretical and practical aspects and the work methodology of the oceanography
- B5 The students will be able to develop the sufficient autonomy to participate in research projects and scientific collaborations, especially in interdiscipinary contexts
- C3 The students will analyse situations and specific oceanographic conditions related with the global change
- C4 The students will be able to apply in the practice the obtained knowledge and issue resolutions and judgments in the different oceanography fields
- D1 The students will know and will be able to apply the scientific method in the academic and research fields.
- D3 The students will be able to communicate the obtained information and their conclusions in a effective way to the general public, to other scientists and to the competent authorities, listening and answering of effective form and, using an appropriate language to the audience and to the context

Learning outcomes	
Expected results from this subject	Training and

	C4
	D1
	D3

Contents	
Topic	
T1.Tectonic and geomorphological configuration of the oceanic bottom	The sub-topic coincides with the topic
T2. Geological processes in coastal environments	
T3. Processes in of continental shelf environments	The sub-topic coincides with the topic
T4. Origin and distribution of marine sediments	The sub-topic coincides with the topic
T5. Processes of resedimentation associated to the continental slope: turbidites	The sub-topic coincides with the topic
T6. Processes in hemipelagic and pelagic environments	The sub-topic coincides with the topic
T7. Evolution of continental margins and oceanic basins. Interaction between the internal and external geological processes	
T8. Seismic-stratigrafical interpretation of marine sedimantary environments	The sub-topic coincides with the topic
P1. Geological characterisation of coastal environments	Practical contents developed in the Field Trip of Almería
P2. Identification and characterisation of shelf environments	Practical contents developed in the Field Trip of Almería
P3. Characterisation of continental slope environments	Practical contents developed in the Field Trip of Almería
P4. Caracerización of pelagic environments	Practical contents developed in the Field Trip of Almería
P5. Space-temporary evolution of continental margins and oceanic basins. Filling of basins: budget-tectonic-sedimentation relations	Practical contents developed in the Field Trip of Almería

Planning			
	Class hours	Hours outside the classroom	Total hours
Lecturing	23	35	58
Introductory activities	2	0	2
Field practice	0	10	10
Studies excursion	20	20	40

\*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies	
	Description
Lecturing	It consists in the exhibition of contents by part of the professor, analysis of competitions, explanation and demonstration of capacities, skills and knowledges in the classroom, using like methodology the participatory masterclass and in which the function of the professor is to explain the theoretical foundations of the matter.
Introductory activities	It will contextualise the subject inside the *master as well as the zone of exit of studies.
Field practice	The students will have to make a memory of field with photographic material and own annotations, as well as resolve practical exercises, so much on the terrain as in cabinet, using specific bibliography collected and the guide of field.
Studies excursion	Session of work *grupal in practices of field, under the supervision of the professor, making possible the significant construction of the knowledge through the interaction and activity of the student and his contact with the reality where has to apply his knowledges. It will do a route by the outcrops *Neógenos of several basins *sedimentarias of the *sureste peninsular in which there is glorious examples of half *sedimentarios marine fossils, that include platforms *carbonatadas, *turbiditas, *evaporitas, reefs, *sedimentación *pelágica, etc.

Personalized assistance				
Methodologies	Description			
Lecturing	The students will be attended of personal form by any one of the professors that give the matter, by means of concerted previous appointment by email. Likewise, they will be attended in front of any query during the development of the lessons *magistrales.			
Studies excursion	The students will be attended of personal form by any one of the professors that give the matter, by means of concerted previous appointment by email. Likewise, they will be attended in front of any query during the development of the exits of studies.			
Introductory activities	The students will be attended of personal form by any one of the professors that give the matter, by means of concerted previous appointment by email. Likewise, they will be attended in front of any query during the development of the introductory activities.			
Field practice	The students will be attended of personal form by any one of the professors that give the practices of field			

Assessment						
	Description	Qualificat	on Tra	-	and Le	_
Lecturing	They will evaluate the knowledges purchased by means of proofs written and/or oral	60				
Report of practices, practicum and external practices	They will evaluate the reports of field and exercises elaborated by the/the student/to	40	A3 A4	B1 B5	C4	D1 D3

## Other comments on the Evaluation

The official dates for the proofs of evaluation can consult in:&\*nbsp;http://masteroceanografia.com/horarios/requires of the students that \*curse this matter a responsible and honest behaviour. It considers inadmissible any form of fraud (copy or plagiarism) directed to \*falsear the level of knowledges and skills reached in all type of proof, report or work. The fraudulent behaviours will be able to suppose suspend the subject during a complete course. It will carry an internal register of these performances so that, in case of \*reincidencia, request the opening to the rectorship of a disciplinary file

#### Recommendations

## Subjects that it is recommended to have taken before

Geological Oceanography/V10M153V01CF104

## Other comments

For those students that have not graduated in Sciences of the Sea or in Geology is fundamental to have \*cursado the subject of Geological Oceanography.

## Contingency plan

#### **Description**

=== EXCEPTIONAL MEASURES SCHEDULED ===

In front of the uncertain and unpredictable evolution of the sanitary alert caused by the \*\*COVID- 19, the University establishes an extraordinary planning that will activate in the moment in that the administrations and the own institution determine it attending to criteria of security, health and responsibility, and guaranteeing the teaching in a no face-to-face stage or no totally face-to-face. These already scheduled measures guarantee, in the moment that was prescriptive, the development of the teaching of a way but agile and effective when being known in advance (or with a wide \*antelación) by the students and the \*profesorado through the tool normalised and institutionalised of the educational guides \*\*DOCNET.

=== ADAPTATION OF The METHODOLOGIES ===

- \* educational Methodologies that keep
- 1.- Mixed teaching: they keep
- 2.- Teaching no face-to-face: they will adapt to the available resources.
- \* Educational methodologies that modify
- 1.- Mixed teaching: they do not modify
- 2.- Teaching no face-to-face: the exits of field inside the Camp by the Neogean basins of the of Spain (Almería) will treat of virtualizar the most possible. Likewise they will propose activities that stimulate his self learning. If it is necessary, will work with flights of Google Earth, aerial photography, field photography and videos, as well as with diagrams of stratigraphical records, signposts of correlation, etc.
- \* Mechanism no face-to-face of attention to the students (\*\*\*tutorías)
- 1.- Mixed teaching: previous concertation by email, face-to-face and/or virtual through Remote Campus.
- 2.- Teaching no face-to-face: previous concertation by email, virtual through Remote Campus
- \* Modifications (yes proceed) of the contents to give
- 1.- Mixed teaching: it does not have intention to change the contents
- 2.- Teaching no face-to-face: it does not have intention to change to contained
- \* additional Bibliography to facilitate the car-learning is not necessary.
- \* Other modifications

=== ADAPTATION OF The EVALUATION ===

\* Test already made

Proof \*\*XX: [previous Weight 00%] [Weight Proposed 00%]

- 1.- Mixed teaching: they conserve the weights of the face-to-face situation.
- 2.- Teaching no face-to-face: exam 60%/40%; practical report 40%/60%
- \* pending Proofs that keep

Proof \*\*XX: [previous Weight 00%] [Weight Proposed 00%]

...

\* Proofs that modify

[previous Proof] =&\*gt; [new Proof]
1.- Mixed teaching: they do not modify

2.- Teaching no face-to-face: it does not modify

\* New test

## \* additional Information

During the no face-to-face teaching, requires of the \*\*\*estudiantado that, in these exceptional circumstances, face this matter with a responsible and honest behaviour. It will consider inadmissible any form of copy directed to \*falsear the level of knowledges and skills reached in the preparation of the \*\*\*entregables, as well as during the virtual examination. Yes there is some suspicion of some type of fraudulent behaviour, will be able to subject to the students to an additional control to check his veracity.

=== EXCEPTIONAL PLANNING ===

Given the uncertain and unpredictable evolution of the health alert caused by COVID-19, the University of Vigo establishes an extraordinary planning that will be activated when the administrations and the institution itself determine it, considering safety, health and responsibility criteria both in distance and blended learning. These already planned measures guarantee, at the required time, the development of teaching in a more agile and effective way, as it is known in advance (or well in advance) by the students and teachers through the standardized tool.

## === ADAPTATION OF THE METHODOLOGIES ===

- \* Teaching methodologies maintained
- \* Teaching methodologies modified
- \* Non-attendance mechanisms for student attention (tutoring)
- \* Modifications (if applicable) of the contents
- \* Additional bibliography to facilitate self-learning
- \* Other modifications

=== ADAPTATION OF THE TESTS ===

\* Tests already carried out

Test XX: [Previous Weight 00%] [Proposed Weight 00%]

. . .

\* Pending tests that are maintained

Test XX: [Previous Weight 00%] [Proposed Weight 00%]

• • •

- \* Tests that are modified [Previous test] => [New test]
- \* New tests
- \* Additional Information

General	Climate models course will deal about the different ty	pes of models tl	hat are used for t	the study of the climate	
description	as well as its evolution over the years. You will see di	ferent models a	nd their output f	iles in order to learn how	
·	to treat and analyze their results. Finally, we will know	v the climatic m	odels, their funct	tion and their main	
	characteristics.				

## Competencies

Code

- A1 Students who have demonstrated knowledge and understanding that is founded upon and extends and/or enhances that typically associated with the first cycle, and that provides a basis or opportunity for originality in developing and/or applying ideas, often within a research context
- A5 Students who have the learning skills to allow them to continue to study in a manner that may be largely self-directed or autonomous.
- B2 The students will interpret the behaviour of the global oceanic system and their controlling factors.
- B5 The students will be able to develop the sufficient autonomy to participate in research projects and scientific collaborations, especially in interdiscipinary contexts
- C3 The students will analyse situations and specific oceanographic conditions related with the global change
- C7 The students will obtain knowledge that will allow them reinforce and deepen in the physical mechanisms that control the atmosphere-ocean interactions, the climatic variability, as well as the validity and contrast of climatic models.
- D2 The students will possess the handle skills in the laboratory that allow them to develop autonomous work.
- D4 The students will be able to understand the need and obligation to perform a continuous training, to a large extent autonomous, for the scientific development, updating the knowledges, skills and attitudes of the professional competences along the life.

Learning outcomes	
Expected results from this subject	Training and
	Learning Results
Knowledge of advanced mathematical and numerical methods used in climate simulation models.	A1
Knowledge of the evolution of climate models both in space and time.	A5
Knowledge of the complexity of the simulation of the different climatic processes.	B2
Ability to validate a climate model and make the necessary changes when discrepancies are observed	B5
between model predictions and observations.	C3
Ability to analyze with the models, the observed changes and the future climate under different scenarios	s. C7
Knowledge and analysis of climate models from a global and regional perspective.	D2
	D4

	D4

Methodologies	
	Description
Lecturing	The teacher explains the theoretical concepts of the different subjects of the course using powerpoint.
Problem solving	Seminars in which the student solve practical cases supervised by the teacher. They are activities developed to improve the significant construction of the knowledge through the interaction between students. The aim of the teacher is to present the aims, to orient students and to realize the follow-up of the procedure to carry out the practical activity.
Presentation	Individual or group oral sesion of a subject from the course. The teacher presents the aims, orients and supervises the oral presentation.
Seminars	Significant construction of the knowledge through the interaction between the teacher and the student by means of sessions of personalized supervision or in group very reduced, where the teacher orients and resolves doubts.

Personalized	accictance
r ei sullalizeu	assistante

## **Methodologies Description**

Problem solving The function of the professor is to present the aims, orient the work and realises the follow-up of the same.

Seminars By means of sessions of tutoríals personalised or in groups very reduced, the professor will orient and will resolve the doubts.

Assessment						
	Description	Qualificatio	n Trai	-	and Le	arning
Problem and/or exercise solving	Questions with short answer about the different subjects of the course.	40	A1 A5	B2 B5	C3 C7	
Essay	It will value the work and the progress of the student during the classes and the practical cases as well as, the realization and presentation of summaries and works proposed by the teachers.	60	A1 A5	B2 B5	C3 C7	D2 D4

#### Other comments on the Evaluation

Class attandance is mandatory especially to the seminars.

The students that cannot attend the course must justify it properly. The evaluation will be carried out by means of alternative activities proposed by the teacher.

Tutorials:Online through Remote Campus by appointment

#### **Examinations:**

March 11, 2021, 10-12 h

Changes in the dates of examinations approved officially will be published in the board of announcements and in the web of the Centre.

## Contingency plan

#### Description

#### === EXCEPTIONAL MEASURES SCHEDULED ===

In front of the uncertain and unpredictable evolution of the sanitary alert caused by the \*COVID-19, the University of Vigo establishes extraordinary planning that will activate at the moment in that the administrations and the own institution determine it attending to criteria of security, health, and responsibility, and guaranteeing the teaching in a no face-to-face stage or partially face-to-face. These already scheduled measures guarantee, at the moment that was prescriptive, the development of the teaching of a more agile and effective way when being known in advance (or with a wide \*antelación) by the students and the professorate through the tool normalized and institutionalized of the educational guides.

#### === ADAPTATION OF THE METHODOLOGIES ===

\* educational Methodologies that keep

We will keep the use of FAITIC platform to upload all information necessary to reach the main objectives of the subject Presentations

Problem-solving

Seminars

\* educational Methodologies that modify

All methodologies will be on-line through Remote Campus, Zoom, Teams, or similar platforms.

\* Mechanism no face-to-face of attention to the students (\*tutorías)

Tutorial classes will be virtual through Remote Campus with previous appointment

\* Modifications (if they proceed) of the contents to give

There will be no modifications

\* additional Bibliography to facilitate the car-learning

It will be no necessary additional bibliography

\* Other modifications

## === ADAPTATION OF THE EVALUATION ===

\* Test already made

Tests already made will keep their weight

\* Test slopes that keep

Pending tests also will keep their weight

\* Test that they modify

[Face-to-Face tests] => [Online tests through Faitic, Campus Remoto, Teams, Zoom[].]

\* New proofs

There will be new tests

\* additional Information

## Competencies

Code

- A1 Students who have demonstrated knowledge and understanding that is founded upon and extends and/or enhances that typically associated with the first cycle, and that provides a basis or opportunity for originality in developing and/or applying ideas, often within a research context
- A2 Students who can apply their knowledge and understanding, and problem solving abilities in new or unfamiliar environments within broader (or multidisciplinary) contexts related to their field of study
- A4 Students who can communicate their conclusions, and the knowledge and rationale underpinning these, to specialist and nonspecialist audiences clearly and unambiguously
- A5 Students who have the learning skills to allow them to continue to study in a manner that may be largely self-directed or autonomous.
- B2 The students will interpret the behaviour of the global oceanic system and their controlling factors.
- B3 The students will be able to deepen in the main oceanographic processes and their spatiotemporal scales
- C1 The students will be able to obtain advanced and relevant knowledge, of skilled and multidisciplinary character, in the field of the oceanography and their application to the marine environment
- C3 The students will analyse situations and specific oceanographic conditions related with the global change
- C7 The students will obtain knowledge that will allow them reinforce and deepen in the physical mechanisms that control the atmosphere-ocean interactions, the climatic variability, as well as the validity and contrast of climatic models.
- D3 The students will be able to communicate the obtained information and their conclusions in a effective way to the general public, to other scientists and to the competent authorities, listening and answering of effective form and, using an appropriate language to the audience and to the context

Climate change and climate variability;</li> <li>1.4. Earth's climate and energy budget;</li> <li>1.5. Forcing, feedback, and response mechanisms of the climate system;</li> <li>1.6. Transient climate response, equilibrium climate sensitivity, and Earth system sensitivity;</li> <li>1.7. Global warming and the 1.5°C and 2.0°C climate thresholds.</li> </ul>

Topic 2. Proxies of past ocean and climate	2.1. Introduction to proxies and tracers;		
change			
Change	2.2. Micropaleontological proxies and transfer functions;		
	2.3. Geochemical proxies; 2.4. Geophysical proxies;		
	2.4. Geophysical proxies; 2.5. Sedimentological and mineralogical proxies.		
Topic 3. Chronologies of past ocean and climate	3.1. The importance of chronology to decipher timing and rates of change;		
change	3.2. Radiometric methods of dating (e.g., uranium-thorium, radiocarbon);		
	3.3. Oxygen isotope stratigraphy;		
Tania A. Tantania Casta Olimata Channa	3.4. Site to site correlations.		
Topic 4. Tectonic-Scale Climate Change	4.1. Plate tectonics, weathering, CO2, and long-term climate;		
	4.2. Greenhouse and icehouse climates.		
Topic 5. Orbital-Scale Climate Change	5.1. Astronomical control of solar radiation;		
	5.2. Insolation control of ice sheets;		
	5.3. Insolation control of monsoons;		
	5.4. Orbital-scale forcing, feedbacks, and responses;		
	5.5. The 40,000- and the 100,000-year ice-age cycles.		
Topic 6. Millennial- and centennial-scale	6.1. Patterns and mechanisms of sub-orbital climate variability;		
(suborbital) climate variability	6.2. The role of Northern Hemisphere ice sheets;		
(concern, content content,	6.3. The role of the Atlantic Meridional Overturning Circulation;		
	6.4. The role of solar output;		
	6.5. Dansgaard-Oeschger, Heinrich events, and Bond cycles.		
Topic 7. The role of the ocean in atmospheric CO	27.1. Terrestrial, atmospheric, and oceanic reservoirs of carbon;		
variations	7.2. Ocean carbonate chemistry and the carbonate compensation		
	feedback:		
	7.3. Glacial-interglacial variations in atmospheric CO2 concentrations.		
Laboratory practicals	Laboratory practical 1. Dating methods in marine sediments;		
Laboratory practicals	Laboratory practical 2. Environmental magnetism;		
	Laboratory practical 3. X-ray diffraction (XRD) as a tool to determine		
	mineral content in marine sediments.		
	Laboratory practical 4. X-Ray Fluorescence (XRF) scanning as a tool to		
	determine bulk sediment geochemistry of in marine sediments;		
	Laboratory practical 5. The sensitivity of global and polar temperatures to		
	climate forcing.		
Seminars	Seminar 1. Past and future climate variability in the Indo-Pacific: drivers		
Serimars	and mechanisms (Kaustubh Thirumalai, University of Arizona, USA);		
	Seminar 2. Diatom productivity and the marine silica cycle (Oscar Romero,		
	MARUM, University of Bremen, Germany);		
	Seminar 3. Palaeoclimatic and palaeoenvironmental significance of		
	Mediterranean terrestrial carbonates (Eleonora Regattieri, Istituto di		
	Geoscienze e Georisorse IGG-CNR, Italy);		
	Seminar 4. Climate and vegetation changes in Europe in response to		
	glacial-interglacial cycles and more rapid events over the last million years		
	(Maria Fernanda Sanchez Goñi, CNRS 5805 EPOC - OASU, University of		
	Bordeaux, France).

Methodologies	
	Description
Lecturing	Lectures on the 7 topics of the program. Coverage of the topics will be flexible to address questions and issues that may arise over the duration of the course. Some lectures will be given by (foreigner) guest lecturers and done by remote-connection.
Laboratory practical	They illustrate those methods and protocols that are commonly used to generate sedimentological, geophysical, and/or geochemical data from deep-sea sediment cores.
Presentation	Oral presentations on topics that are related to those addressed during the lectures.

Sem	inars

Additional presentations centred on specific, timely topics within the wider fields of palaeoclimatology and paleoceanography given by invited speakers from outside the Universidade de Vigo.

Personalized assistance		
Methodologies	Description	
Lecturing	Questions and doubts that may arise during lectures will be addressed during tutorials. In order to schedule a tutorial students and/or group of students should contact the professors well in advance in order to efficiently schedule the tutorial.	
Laboratory practical	Questions and doubts that may arise during laboratory practicals will be addressed during tutorials. In order to schedule a tutorial students and/or group of students should contact the professor well in advance in order to efficiently schedule the tutorial.	
Presentation	Prior to the final presentation the students can contact the professors in order to be advised about literature material that could be used to develop the presentation topic.	
Seminars	Questions and doubts that may arise during seminars will be addressed during tutorials. In order to schedule a tutorial students and/or group of students should contact the professors well in advance in order to efficiently schedule the tutorial.	

Assessment					
	Description	Qualification			ng and Results
Essay	Oral presentations on topics that are related to those addressed during the lectures.	70	A1		C3
Problem and/or exercise solving	Development of a short report (2 to 5 pages) on two or more topics related to those addressed during lectures.	30	_	B2 B3	C1 C7

#### Other comments on the Evaluation

Attendance at lectures and laboratory practicals is and essential requirement to obtain a positive evaluation. Students that cannot attend some of these activities are expected to provide a proper justification for their absence. The team of professors is in charge of selecting the topics for the final presentations and reports.

Date, time and place of the exams will be published in the official web of the Master in Oceanography:

http://masteroceanografia.com/horarios/

Students are strongly requested to fulfil an honest and responsible behaviour. It is considered completely unacceptable any alteration or fraud (i.e., copy or plagiarism) contributing to modify the level of knowledge and abilities acquired in exams, evaluations, reports or any kind of teacher proposed work. Fraudulent behaviour may cause failing the course for a whole academic year. An internal dossier of these activities will be built and, when reoffending, the university rectorate will be asked to open a disciplinary record.

## **Contingency plan**

## **Description**

=== EXCEPTIONAL PLANNING ===

Given the uncertain and unpredictable evolution of the health alert caused by COVID-19 pandemic, the University of Vigo establishes an extraordinary plan that will be activated when the the regional and national governments and of the university itself determine it, considering safety, health and responsibility criteria both in distance and blended learning. These already planned measures guarantee, at the required time, the development of teaching in a more agile and effective way, as it is known in advance (or well in advance) by the students and teachers through the standardized tool.

#### === ADAPTATION OF THE METHODOLOGIES ===

\* Teaching methodologies maintained

Contents of lectures, laboratory practicals, and seminars will stay the same as for campus-based teaching. In the case of lockdown, teaching will be entirely or partly moved moved online, using, e.g., the flipped classroom technique and CampusRemoto (https://campusremotouvigo.gal). In addition, teaching will be complemented where needed with additional literature material and/or videos.

\* Teaching methodologies modified

Flipped classroom technique. This is a pedagogical model that transfers part of the work out of the classroom and requires students make part of the reading and comprehension work prior to the lecture, laboratory practical, or seminar. In this way, the class-based work will be enriched with questions and in-depth debates.

- \* Non-attendance mechanisms for student attention (tutoring) Entirely or partly moved online using CampusRemoto.
- \* Modifications (if applicable) of the contents None
- \* Additional bibliography to facilitate self-learning None
- \* Other modifications

None.

General	The atmosphere and the ocean are two physical systems interacting. In this subject we will study all those				
description	processes which deal about the interaction between the ocean and the atmosphere as well as their exchanges.				

- A1 Students who have demonstrated knowledge and understanding that is founded upon and extends and/or enhances that typically associated with the first cycle, and that provides a basis or opportunity for originality in developing and/or applying ideas, often within a research context
- A2 Students who can apply their knowledge and understanding, and problem solving abilities in new or unfamiliar environments within broader (or multidisciplinary) contexts related to their field of study
- A5 Students who have the learning skills to allow them to continue to study in a manner that may be largely self-directed or autonomous.
- B3 The students will be able to deepen in the main oceanographic processes and their spatiotemporal scales
- B4 The students will be able to analyse oceanographic databases and obtain skills for their treatment.
- C2 The students will be able to schedule, design and execute original applied investigations from the stage of recognition until the evaluation of results and discoveries.
- C5 The students will be able to draft scientific articles and present their results with clarity, using solid arguments in the development of their conclusions
- C7 The students will obtain knowledge that will allow them reinforce and deepen in the physical mechanisms that control the atmosphere-ocean interactions, the climatic variability, as well as the validity and contrast of climatic models.
- D1 The students will know and will be able to apply the scientific method in the academic and research fields.
- D2 The students will possess the handle skills in the laboratory that allow them to develop autonomous work.
- D3 The students will be able to communicate the obtained information and their conclusions in a effective way to the general public, to other scientists and to the competent authorities, listening and answering of effective form and, using an appropriate language to the audience and to the context
- D4 The students will be able to understand the need and obligation to perform a continuous training, to a large extent autonomous, for the scientific development, updating the knowledges, skills and attitudes of the professional competences along the life.

Learning outcomes	
Expected results from this subject	Training and
	Learning Results

The students will learn that the atmosphere and the ocean works like an integrated system and they will understand the different temporal and spatial scales of the atmosphere and the ocean.

A2 The student will be able to analyse atmospheric and oceanographic databases and to develop skills in the A5 treatment of the same.

B3 B4 C2 C5 C7 D1 D2 D3 D3 D4

Methodologies	
	Description
Lecturing	The teacher explains the main theoretical aspects of the subject in class by means of Powerpoint or similar.
Problem solving	Seminars during which students solve practical activities supervised by the teacher.  They are activities developed to improve the significant construction of the knowledge through the interaction between students. The function of the teacher is to present the aims, supervise and to realize the follow-up of the same.
Presentation	Individual or group oral session of a subject from the course.
Seminars	Significant construction of the knowledge through the interaction between the teacher and the student by means of tutorials to orient and solve doubts.

Personalized as	Personalized assistance		
Methodologies Description			
Problem solving	During the resolution of practical cases and in the tutorial classes, the attention to the student will be customized with the aim to resolve any type of doubt so much theoretical like practice. Tutorial classes will be virtual through the Campus Remoto by appointment		
Seminars	During the resolution of practical cases and tutorials the attention to the student will be able to be customized with the aim to resolve any type of doubt so much theoretical like practice. Tutorials: Monday from16:00 to 18:00 and Wednesday from 9:00 to 11:00

#### Other comments on the Evaluation

It is mandatory the attendance the masterlessons and especially the seminars of practical activities.

The students that cannot attend the course must justify it properly. The evaluation will be carried out by means of alternative activities proposed by the teacher/s.

#### **Examinations:**

March 11, 15-17 hChanges in the dates of examinations approved officially will be published in the board of announcements and in the web of the Centre.

description					
-	studies directed to determine the effect of the global ch	nange on popul	lations, communi	ties and marine	
	ecosystems, by means of masterclasses, practices of la				

- A2 Students who can apply their knowledge and understanding, and problem solving abilities in new or unfamiliar environments within broader (or multidisciplinary) contexts related to their field of study
- A4 Students who can communicate their conclusions, and the knowledge and rationale underpinning these, to specialist and nonspecialist audiences clearly and unambiguously
- A5 Students who have the learning skills to allow them to continue to study in a manner that may be largely self-directed or autonomous.
- B1 The students will understand in a detailed and based form the theoretical and practical aspects and the work methodology of the oceanography
- B2 The students will interpret the behaviour of the global oceanic system and their controlling factors.
- B3 The students will be able to deepen in the main oceanographic processes and their spatiotemporal scales
- B5 The students will be able to develop the sufficient autonomy to participate in research projects and scientific collaborations, especially in interdiscipinary contexts
- C1 The students will be able to obtain advanced and relevant knowledge, of skilled and multidisciplinary character, in the field of the oceanography and their application to the marine environment
- C2 The students will be able to schedule, design and execute original applied investigations from the stage of recognition until the evaluation of results and discoveries.
- C3 The students will analyse situations and specific oceanographic conditions related with the global change
- C4 The students will be able to apply in the practice the obtained knowledge and issue resolutions and judgments in the different oceanography fields
- D1 The students will know and will be able to apply the scientific method in the academic and research fields.
- D2 The students will possess the handle skills in the laboratory that allow them to develop autonomous work.
- D3 The students will be able to communicate the obtained information and their conclusions in a effective way to the general public, to other scientists and to the competent authorities, listening and answering of effective form and, using an appropriate language to the audience and to the context
- D4 The students will be able to understand the need and obligation to perform a continuous training, to a large extent autonomous, for the scientific development, updating the knowledges, skills and attitudes of the professional competences along the life.

Learning outcomes	
Expected results from this subject	Training and
	Learning Results
The students will learn the importance of the human effect on the biogeochemical processes to scale	A5
global and temporary scales, its repercussions for the marine environment and the sustainability of the	B3
ecosystems.	B5
	D1
	D4

The students will acquire the capability to interpret	C2
and analyse critically the results of observational and experimental studies aimed to determine the effect	C4
of the global change on populations, communities and marine ecosystems.	D1
The students will work their skills to express the ideas and knowledge about the topic by oral and written	A2
communications.	A4
	B2
	B3
	C3
	C4
	D3
The students will learn laboratory or field methodologies that will help them to interpret the results	B1
showed in the scientific publications related with the field of the Global Change	
	D2

Contents	
Topic	
SUBJECT 1.	Introduction and reflections to start with a course of global change.
SUBJECT 2.	Global change versus climatic change. Natural environmental variability and antropogenic. The biology of the ocean under global change: answers to different levels of organisation. Multiple factors of stress. Adaptation and acclimation.
SUBJECT 3.	Temperature and nutrients in the context of the global change. Metabolic theory of the ecology.
SUBJECT 4	Effect of the degradation of ozone layer and the increase of the UV radiation on the marine ecosystems. The ozone cycle. UVR penetration in the aquatic environment. Photodegradation and photo inhibition. Direct and indirect effects of UV radiation on marine organisms.
SUBJECT 5.	Impact of the global change on the oxygen cycle in the oceans: expansion of the suboxic and anoxic zones.
SUBJECT 6.	Impact of the global change on the carbon cycle in the oceans: storage of antropogenic carbon and acidification. Effect of CO2 increase on marine organisms and ecosystem
SUBJECT 7.	Impact of the global change on the nitrogen and phosphorus cycles: antropogenic fertilisation by atmospheric and continental drivers.
SUBJECT 8.	Impacts of the global change in the structure and operation of the planktonic communities. Distribution and abundance of functional key groups. Changes in the structure of the communities and in food webs. Interdecadal trends in primary production.
SUBJECT 9.	Fisheries overexploitation. The magnitude of fishing. Effect of fishing on populations and ecosystem. Overexploitation: types, causes and solutions. Overexploitation and the future of fishing.
SUBJECT 10.	Impact of global change on coastal ecosystems. Effects on benthic communities.

Methodologies	
	Description
Lecturing	Exhibition by part of the professor of the concepts but notable of the matter.
Seminars	Work of practical character guided by the professor. It can have individual character or of group.
	The communication of scientific works in international congresses
Problem solving	Resolution of a practical case: Impact of the global change in the Estuary of Vigo.

Laboratory practical	Laboratory practical classes:
	1) Determination of metabolic taxes: phytoplankton primary production. Photosynthesis-Irradiance curves 2) Multivariate statistical techniques
Seminars	Group tutorials to supervise the work that has to be defended at the end of the course. The students will have to show the advances and argue their proposals to the professor and the rest of the students.
Presentation	Oral defense of a topic related to the subject. The topic will be chosen by the student. The defence of the work will consist of roughly 15 min presentation supported by computer (i.e. power point or simmilar) and discussion of the main questions made by the professor and/or students. A written report of the work can be required if neccesary.

Personalized assistance			
Methodologies	Description		
Lecturing	The student that wish to be attended in a one-to-one tutorial will be scheduled between 13:00 and 15:00 h. The student shall previously contact the corresponding professor by email.		
Seminars	The student that wish to be attended in a one-to-one tutorial will be scheduled between 13:00 and 15:00 h. The student shall previously contact the corresponding professor by email.

The evaluation will be made taking into account the contribution and implication of the students during the group tutorials, the quality of the written work (if provided) and the oral defence.	25	15 BZ CI 1	D1 D3

#### Other comments on the Evaluation

The evaluation of the theoretical (masterclasses) and practical (laboratory practical lessons) knowledge will be carried out in one examination. The rates obtained from the call in June will be saved for the for the call in July, only in the same academic course. The dates and deadlines will be published in http://masteroceanografia.com/horarios/.

It is required from the students that course this subject a responsible and honest behaviour. Any form of fraud (copy or plagiarism) aimed to modify the level of knowledge and skills reached in all type of proof, report or work will be punished. The fraudulent behaviour will be produce the failure of the subject during a complete course. An internal registration of these performances will be also registered, and in case of new fraudulent events, a disciplinary file can be opened.

#### Contingency plan

#### **Description**

=== EXCEPTIONAL PLANNING ===

Given the uncertain and unpredictable evolution of the health alert caused by COVID-19, the University of Vigo establishes an extraordinary planning that will be activated when the administrations and the institution itself determine it, considering safety, health and responsibility criteria both in distance and blended learning. These already planned measures quarantee, at the required time, the development of teaching in a more agile and effective way, as it is known in advance (or well in advance) by the students and teachers through the standardized tool.

#### === ADAPTATION OF THE METHODOLOGIES ===

\* educational Methodologies that keep:

All the educational methodologies.

#### \* Educational methodologies that modify

In case of a no face-to-face teaching, all the methodologies will be adapted virtually using as main tools the Remote Campus and Faitic platforms. The modifications will not be significant for most of the methodologies excepting the laboratory lessons and field classes which will be explained using specific tutorials for each subject.

\* Mechanism no face-to-face of attention to the students (\*tutorías)

One-to-one tutorials with the professors will be performed by using the virtual offices in Remote Campus platform.

- \* Modifications (if they proceed) of the contents to give Contents will not be modified.
- \* Additional bibliography to facilitate the car-learning Additional bibliography will not be neccesary

#### === ADAPTATION OF THE EVALUATION ===

The final test will be replaced by a written individual report that will include the answers to specific questions provided by the professors about the main contents from both, master classes and practical lessons, of the subject.

\* Proofs that modify

[Test] = [Written individual report]

Methodologies	
	Description
Lecturing	The basic concepts related to the design and realization of oceanographic campaigns will be presented by the professor.
Laboratory practical	The students will become familiar with the laboratory techniques for the preparation of the samples collected in the oceanographic campaign before their analysis, with the use of oceanographic data acquisition and treatment software.
Studies excursion	A campaign will be made on board an Oceanographic Vessel to become familiar with the use of the different data acquisition equipment both in the water column and in the substrate.
Presentation	With the information collected in the campaigne at a Oceanographic vessel, the students will have to make the report of the campaign and expose it in the class.
Seminars	There will be tutorials in small groups where students can ask questions and answer questions.

Personalized assistance				
Description				
The students will be personally attended during the development of the master sessions as well as during the individual tutorials enabled for this purpose.				
The students will be personally attended during the development of laboratory practices as well as during the individual tutorials enabled for this purpose.				
The students will be personally assisted during the development of field trips as well as during the individual tutorials enabled for this purpose.				
The students will be personally attended during the development of the presentations / exhibitions as well as during the individual tutorials enabled for that purpose.

# Other comments on the Evaluation

The date, time and place of the evaluation tests will be published on the master's official website.

Students who study this subject are responsible and honest behavior. Any form of fraud (copying, or plagiarism) aimed at distorting the level of knowledge and skills reached in any type of test, report or work will be considered inadmissible. Fraudulent behaviors may involve suspending the subject during a full course. An internal record of these actions will be kept so that, in the case of recidivism, request the opening of a disciplinary file to the Rectorate.

#### Description

=== EXCEPTIONAL PLANNING ===

Given the uncertain and unpredictable evolution of the health alert caused by COVID-19, the University of Vigo establishes an extraordinary planning that will be activated when the administrations and the institution itself determine it, considering safety, health and responsibility criteria both in distance and blended learning. These already planned measures guarantee, at the required time, the development of teaching in a more agile and effective way, as it is known in advance (or well in advance) by the students and teachers through the standardized tool.

- === ADAPTATION OF THE METHODOLOGIES ===
- \* Teaching methodologies maintained
- 1.- Mixed teaching: they keep
- 2.- Teaching no face-to-face: they will adapt to the available resources.
- \* Teaching methodologies modified
- 1.- Mixed teaching: they do not modify
- 2.- Teaching no face-to-face: the practices of laboratory and cruise will be virtualized the most possible. Likewise, it will propose activities that stimulate his self learning
- \* Non-attendance mechanisms for student attention (tutoring)
- 1.- Mixed teaching: previous concertation by email, face-to-face and/or virtual through Remote Campus.
- 2.- Teaching no face-to-face: previous concertation by email, virtual through Remote Campus
- \* Modifications (if applicable) of the contents
- 1.- Mixed teaching: it does not have the intention to change the contents
- 2.- Teaching no face-to-face: it does not have the intention to change the contained
- \* Additional bibliography to facilitate self-learning Is not necessary
- \* Other modifications

=== ADAPTATION OF THE TESTS ===

\* Tests already carried out

Test XX: [Previous Weight 00%] [Proposed Weight 00%]

1.- Mixed teaching: they conserve the weights of the face-to-face situation.

- 2.- Teaching no face-to-face: they conserve the weights of praises face-to-face situation
- \* Pending tests that are maintained

Test XX: [Previous Weight 00%] [Proposed Weight 00%]

...

\* Tests that are modified

[Previous test] => [New test]

- 1.- Mixed teaching: they do not modify (oral presentation and defense of the report of an oceanographic campaign)
- 2.- Teaching no face-to-face: it does not modify (oral presentation and defense of the report of an oceanographic campaign)
- \* New tests
- \* Additional Information

During the no face-to-face teaching, requires of the students that, in these exceptional circumstances, face this matter with a responsible and honest behaviour. It will consider inadmissible any form of copy directed to false the level of knowledges and skills reached in the preparation of the homeworks, as well as during the virtual examination. If there is some suspicion of some type of fraudulent behaviour, will be able to subject to the students to an additional control to check his veracity.

General	It will consist in a work of investigation in the field of t	he Oceanograph	y, in which sintet	icen and integrate the
description	competitions purchased in the educations.			

- A1 Students who have demonstrated knowledge and understanding that is founded upon and extends and/or enhances that typically associated with the first cycle, and that provides a basis or opportunity for originality in developing and/or applying ideas, often within a research context
- A2 Students who can apply their knowledge and understanding, and problem solving abilities in new or unfamiliar environments within broader (or multidisciplinary) contexts related to their field of study
- A3 Students who have the ability to integrate knowledge and handle complexity, and formulate judgments with incomplete or limited information, but that include reflecting on social and ethical responsibilities linked to the application of their knowledge and judgments
- A4 Students who can communicate their conclusions, and the knowledge and rationale underpinning these, to specialist and nonspecialist audiences clearly and unambiguously
- A5 Students who have the learning skills to allow them to continue to study in a manner that may be largely self-directed or autonomous.
- B1 The students will understand in a detailed and based form the theoretical and practical aspects and the work methodology of the oceanography
- B2 The students will interpret the behaviour of the global oceanic system and their controlling factors.
- B3 The students will be able to deepen in the main oceanographic processes and their spatiotemporal scales
- B4 The students will be able to analyse oceanographic databases and obtain skills for their treatment.
- B5 The students will be able to develop the sufficient autonomy to participate in research projects and scientific collaborations, especially in interdiscipinary contexts
- C1 The students will be able to obtain advanced and relevant knowledge, of skilled and multidisciplinary character, in the field of the oceanography and their application to the marine environment
- C2 The students will be able to schedule, design and execute original applied investigations from the stage of recognition until the evaluation of results and discoveries.
- C3 The students will analyse situations and specific oceanographic conditions related with the global change
- C4 The students will be able to apply in the practice the obtained knowledge and issue resolutions and judgments in the different oceanography fields
- C5 The students will be able to draft scientific articles and present their results with clarity, using solid arguments in the development of their conclusions
- D1 The students will know and will be able to apply the scientific method in the academic and research fields.
- The students will possess the handle skills in the laboratory that allow them to develop autonomous work.
- D3 The students will be able to communicate the obtained information and their conclusions in a effective way to the general public, to other scientists and to the competent authorities, listening and answering of effective form and, using an appropriate language to the audience and to the context
- D4 The students will be able to understand the need and obligation to perform a continuous training, to a large extent autonomous, for the scientific development, updating the knowledges, skills and attitudes of the professional competences along the life.

Learning outcomes	
Expected results from this subject	Training and
	Learning Results

Endow to the students of the competences, knowledges, skills and tools, in order to qualify them, from a Α1 technical-scientific point of view, for the realisation, presentation and defence of a research work. A2 This work will facilitate that the student have a taking of direct contact with the instrumentation, А3 methodological techniques and methods for interpretation of data used in scientific-technical studies in Α4 the ocean. Likewise, it will give him the opportunity to work in a consolidated group of research. Hence, Α5 they are initiating their scientific work in an individual way and/or in a group. В1 B2 В3 B4 В5 C1 C2 C3 C4 C5 D1 D2 D3 D4

#### **Contents**

#### Topic

The student will be able to make the Work End of - Biological oceanography

Máster in the following big areas:

- Physical Oceanography
- Chemical Oceanography
- Geological Oceanography
- Other disciplines related with the half marine and that are inside the contents given in the master.

The lines of investigation or thematic fields offered are the following:

- Marine geology
- Coastal Geology
- Carbon dioxide, global Change and temporary series
- chemical Processes of metals traces with ligandos organic.
- Global changes in the oceanographic chemistry and biogeochemical cycles.
- Ecology and physiology planctónica.
- Oceanography Pesquera
- Effects of global changes in the biological oceanography.
- Global changes in the circulation to wide, meso- and sub-meso scale.
- Fronts, twists and systems of afloramentos.
- Hydrodynamic modelling.
- Biology larvaria of marine invertebrates.
- Effects of physical processes and chemists in the cycles bioxeoguímicos and answer of the biological communities.
- Analysis sedimentario.micropaleontolóxico and isotopic of oceanic polls.
- Ecology bentónica.
- Analysis of oceanographic temporary series.
- Resulted of oceanographic Campaigns.
- Marine geochemistry.
- Wavs of climatic variability.
- Interaction ocean-atmosphere.
- Modelling of the ocean.
- Climatic change in the ocean.
- Energy in half marine (aeolian, maremotriz, currents).
- Identification in analysis of registers paleoclimáticos.
- Dynamic of gases invernadero in the coastal systems.
- Diagénesis Of the organic matter and flows bentónicos.
- Influence of the activity antrópica on the biogeochemical processes in the coastal systems.
- Recent tectonic activity in coastal zones.
- Stratigraphy of coastal zones and his relation with the changes of the level of the mar.
- Geomorfología of continental margins.
- Biological oceanography: Biology and Ecology of the Plankton.
- Ecophysiology of macroalgas and ficología applied.
- Microbial and biogeochemical ecology of the interfase waters-sediment.
- Hydrodynamic modelling in coastal zones.
- Operational oceanography in coastal zones.
- Applications of the teledetection to the coastal oceanography.

# Other comments on the Evaluation

There will be two ordinary announcements to proceed to the defense of the master's degree dissertation, one in June and another in July. The rules, the calendar of procedures, the evaluation guidelines, and another relevante information will be published in the following link http://masteroceanografia.com/trabajo-fin-de-master/.

Students are strongly requested to fulfil a honest and responsible behaviour. It is considered completely unacceptable any alteration or fraud (i.e., copy or plagiarism) contributing to modify the level of knowledge and abilities acquired in exams, evaluations, reports or any kind of teacher proposed work. Fraudulent behaviour may cause failing the course for a whole academic year. An internal dossier of these activities will be built and, when reoffending, the university rectorate will be asked to open a disciplinary record

#### **Contingency plan**

#### **Description**

The plan of development and evaluation described contemplates the case of a normal development of the theoretical and practical classes in a face-to-face context. If by exceptional circumstances this context varies, having to take into account mixed or telematic teaching, we will proceed as follows:

- 1. Mixed teaching. The face-to-face classes will be issued in direct with the means that the University of Vigo supply, guaranteeing in all the cases the opportunity to be able to make questions or consult doubts.
- 2. If the face-to-face or mixed teaching is not possible, we will prepare the necessary videos to cover the theoretical classes, the seminars and the practices and will put to disposal of the students.

In case that the face-to-face teaching was not possible, and given the concrete characteristics of this subject that looks for to supply the basic elements of knowledge of physical oceanography, the relative weight of the different sections will change, suppressing the final examination and evaluating the students by a continuous evaluation system including diverse exercises and seminars.

Previously: examination 60% works 40%

Exceptional circumstances: continuous Evaluation/seminars/exercises: 100%

<sup>\*</sup>The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies	
	Description
Introductory activities	Brief presentation of the educational guide and of the development of the subject.
Lecturing	Exhibition of contents by part of the professor, analysis of competitions, explanation and demonstration of capacities, skills and knowledges in the classroom, using like methodology the participatory masterclass and in which the function of the professor is to explain the theoretical foundations of the matter.
Laboratory practical	Significant construction of the knowledge through the interaction the activity of the student. They are activities developed in spaces and with skilled equipment that improve the significant construction of the knowledge through the interaction and activity of the student. They realise in the laboratory and the function of the professor is to present the aims, orient the work and realise the follow-up of the same.
Seminars	Significant construction of the knowledge through a skilled meeting, of technical or academic nature, that tries to develop a deep study on the matter in question.  The significant construction of the knowledge is active, since the students have to look for and elaborate the information in the frame of a reciprocal collaboration between himself and from the interaction with the professor.

	that will be published as a rubric in the platform TEMA.				

#### Other comments on the Evaluation

In order to surpass the whole subject, all and each one of the parts that compose the subject have to be surpassed with a minimum qualification of 5 points.

In case that any of the proofs of short answer and the resolution and of problems and/or exercises do not reach the minimum note, will repeat the examination in the second announcement.

In the case that it do not reach the minimum note in "Reports/memories of practice" and/or the "Jobs and projects", it will present again the work in the term that the professor estimate timely.

# **Description**

# === EXCEPTIONAL PLANNED MEASURES ===

In the face of the uncertain and unpredictable evolution of the health alert triggered by COVID-19, the University establishes an extraordinary planning that will be activated when the administrations and the institution itself determine it based on safety criteria, health and responsibility, and ensuring teaching in a non face-to-face or non face-to-face setting. These already planned measures guarantee, when it is mandatory, the development of teaching in a more agile and effective way to be known in advance (or with a long advance) by pupils and teachers through the standardised and institutionalised tool of the DOCNET teaching guides.

=== ADAPTATION OF METHODOLOGIES ===

Not applicable

- \* Teaching methodologies to be modified
- Laboratory practice

Laboratory practices that cannot be done in face-to-face mode will be done in the form of a simulation through the virtual classroom (Remote Campus) that the University of Vigo has the disposition of teachers and students. After the virtual classroom session, they will have to present the corresponding report according to the criteria and indications of the trainee teachers.

- Introductory activities:
- Master Lesson: The

The sessions of these activities that cannot be done in person, will be carried out through the virtual classroom that the University of Vigo has the disposition of teachers and students.

\* Off-site student care (tutoring)

Students can consult their questions by appointment in the teacher s virtual office: Room 1752, access code coDC4elw

On the TEMA platform is enabled the Forums section, where a forum will be open for each classroom topic taught, as well as

several forums for laboratory practices, problem classes and seminars. In this way, students will be able to ask questions that can be answered by both teachers and/or classmates/classmates.

- \* Modifications (if applicable) of the contents to be imparted
- \* Additional bibliography to facilitate self-learning

Websites and related videos will be used to complement the training of students, which will be made available to students on the TEMA platform.

\* Other amendments

#### === ADAPTATION OF THE EVALUATION ===

\* Tests already carried out

Test \*XX: [Previous Weight 00%] [Proposed Weight 00%]

Not applicable

\* Evidence pending and ongoing Test \*XX: [Previous Weight 00%] [Proposed Weight 00%]

- Practice report
- Work
- Problem solving and exercises

Does not change the weighting in the final note

\* Tests to be modified [Previous test] => [New test]

Not applicable

description	in the ocean. We will present basic notions on the cyc			
	will do special emphasis on microbial plankton commu			
	biogeochemical cycles. The fundamental aim is to acc			
	their interactions and the oceanographic processes in	order to underst	and the role of th	ne biology of the ocean in
	the Earth system functioning.			

- Students who have demonstrated knowledge and understanding that is founded upon and extends and/or enhances A1 that typically associated with the first cycle, and that provides a basis or opportunity for originality in developing and/or applying ideas, often within a research context
- Students who have the learning skills to allow them to continue to study in a manner that may be largely self-directed or autonomous.
- The students will understand in a detailed and based form the theoretical and practical aspects and the work methodology of the oceanography
- The students will know and will be able to apply the scientific method in the academic and research fields. The students will possess the handle skills in the laboratory that allow them to develop autonomous work.

Learning outcomes	
Expected results from this subject	Training and Learning Results
Students will be able to use the terminology and concepts related with the biological oceanography scientific field	A1 B1
Students will be able to apply the scientific methodology and the basic technics related with the biological oceanography research field	al A1 A5 B1
	D1 D2
Students will be able to analyse and explain the relationship between the organisms and the environmental factors	A1 B1
Students will recognize the diversity and function of the main planktonic and benthonic marine groups	A1 B1
Students will be able to comprehensively describe the processes of circulation of the organic matter in the marine environment	ie A1 B1
Students will be able to evaluate, formulate, and resolve problems related with the oceanography	B1 D1
Students will be able to demonstrate advanced oral and written communication skills	D1

Contents	
Topic	
Lesson 1. The marine environment.	Classification of marine environments and organisms. Abiotic conditions: solar radiation, temperature, salinity, density, pressure. Oceanic circulation.
Lesson 2. Phytoplankton and primary production.	Main groups of phytoplankton. Photosynthesis and primary production. Factors that control primary production. Spatial and temporal variability.

Lesson 3. Microbial plankton: decomposition of organic matter.	Bacteria, archea, virus and heterotrophic protists. Biomass, production and bacterial growth efficiency. Factors that control the bacterial growth: resources versus predation.
Lesson 4. Zooplankton and pelagic food webs.	Main groups of zooplankton. Transfer of energy and trophic chains. Types of pelagic food webs.
Lesson 5. Benthonic Organisms.	Main groups of benthonic plants and animals. Factors that determine the structure of benthonic communities.
Lesson 6. Benthonic communities.	Benthonic communities of shallow rocky and sandy environments.  Benthonic communities of deep systems.
Lesson 7. Human impact on the marine environment.	Overexploitation. Invasive species. Destruction and alteration of habitats. Climate change.

Biogeochemistry of Coastal Systems/V10M153V01211 Global Change and Marine Ecosystems/V10M153V01208

Coastal Ecosystems/V10M153V01212

Oceanography of Unique Regions: Polar, Equatorial and Upwelling Regions/V10M153V01204

#### Subjects that are recommended to be taken simultaneously

Design and Carrying out of Oceanographic Campaigns/V10M153V01301 Oceanography of Ecosystems/V10M153V01102

#### Other comments

Students willing so could attend personal tutorials to solve doubts and/or uncertainties. To better optimise the procedure, the student is requested to previously contact his/her teacher with reasonable anticipation.

Students are strongly requested to fulfil a honest and responsible behaviour. It is considered completely unacceptable any alteration or fraud (i.e., copy or plagiarism) contributing to modify the level of knowledge and abilities acquired in exams, evaluations, reports or any kind of teacher proposed work. Fraudulent behaviour may cause failing the course for a whole academic year. An internal dossier of these activities will be built and, when reoffending, the university rectorate will be asked to open a disciplinary record

#### Contingency plan

#### **Description**

=== EXCEPTIONAL MEASURES SCHEDULED ===

Due to the uncertain and unpredictable evolution of the sanitary alert caused by the COVID- 19, the University establishes an extraordinary planning that will be activated in the moment in that the administrations and the own institution determine it attending to criteria of security, health and responsibility, and guaranteeing the teaching in a no face-to-face stage or no totally face-to-face.

=== ADAPTATION OF The METHODOLOGIES ===

\* Educational methodologies that change

In the situation of no face-to-faceteaching the lessons will by imparted using the Virtual Classrooms of the Remote Campus, following the official calendar and would be complemented with the uploading of presentations in FAITIC and with questionnaires of shelf-evaluation.

In the situation of no face-to-face teaching the field excursion and the practice of laboratory would be substituted by practical exercises of analysis of field sampling data and of an experiment, respectively. The follow-up of the work will be done using the email, the platform FAITIC and the Virtual Classrooms.

- \* Mechanism for no face-to-face of attention to the students (tutorials)
  In the no face-to-face modality personal attention would be by telematic means (email, teacher virtual rooms of the the remote campus, or through the forums of FAITIC). Tutorials must be scheduled in advance.
- \* Modifications of the contents
  The contents will not be modified.
- \* Additional bibliography to facilitate shelf-learning
- -An introduction to the world's oceans: http://highered.mheducation.com/sites/0073376701/student\_view0/index.html -Aranguren-Gassis, M., Teira, E., Serret, P., Martínez-García, S., & Fernández, E. (2012). Potential overestimation of bacterial respiration rates in oligotrophic plankton communities. Marine Ecology Progress Series, 453, 1-10.
- -Martínez-García, S., Fernández, E., Álvarez-Salgado, X. A., González, J., Lønborg, C., Marañón, E., ... & Teira, E. (2010). Differential responses of phytoplankton and heterotrophic bacteria to organic and inorganic nutrient additions in coastal waters off the NW Iberian Peninsula. Marine Ecology Progress Series, 416, 17-33.
- -Martínez-García, S., Fernández, E., Aranguren-Gassis, M., & Teira, E. (2009). In vivo electron transport system activity: a method to estimate respiration in natural marine microbial planktonic communities. Limnology and Oceanography: methods, 7(6), 459-469.
- \* Other modifications

No other modifications are contemplated.

=== ADAPTATION OF The EVALUATION ===

In the case of no face-to-face teaching the types of proofs of evaluation will not be modified, and will take place through the remote campus or FAITIC.

#### **Description**

=== EXCEPTIONAL PLANNING ===

Given the uncertain and unpredictable evolution of the health alert caused by COVID-19, the University of Vigo establishes an extraordinary planning that will be activated when the administrations and the institution itself determine it, considering safety, health and responsibility criteria both in distance and blended learning. These already planned measures guarantee, at the required time, the development of teaching in a more agile and effective way, as it is known in advance (or well in advance) by the students and teachers through the standardized tool.

=== ADAPTATION OF THE METHODOLOGIES ===

- \* Teaching methodologies maintained
- 1.- Mixed teaching: they keep
- 2.- Teaching no face-to-face: they will adapt to the available resources.
- \* Teaching methodologies modified
- 1.- Mixed teaching: they do not modify
- 2.- Teaching no face-to-face: practices of laboratory will treat of virtualize the most possible. Likewise they will propose activities that stimulate his self learning.
- \* Non-attendance mechanisms for student attention (tutoring)
- 1.- Mixedteaching: previous concertation by email, face-to-face and/or virtual through Remote Campus.
- 2.- Teaching no face-to-face: previous concertation by email, virtual through Remote Campus
- \* Modifications (if applicable) of the contents
- 1.- Mixed teaching: it does not have the intention to change the contents
- 2.- Teaching no face-to-face: it does not have the intention to change the contained
- \* Additional bibliography to facilitate self-learning Is not necessary
- \* Other modifications

=== ADAPTATION OF THE TESTS ===

\* Tests already carried out

Test XX: [Previous Weight 00%] [Proposed Weight 00%]

- 1.- Mixed teaching: they conserve the weights of the face-to-face situation.
- 2.- Teaching no face-to-face: Practical Laboratory (40%)/(50%); Exam (60%)/(50%)
- \* Pending tests that are maintained

Test XX: [Previous Weight 00%] [Proposed Weight 00%]

• • •

\* Tests that are modified

[Previous test] => [New test]

- 1.- Mixed teaching: they do not modify
- 2.- Teaching no face-to-face: face-to-face examination ==> virtual examination with Faitic and Remote Campus.
- \* New tests
- \* Additional Information

During the no face-to-face teaching, requires of the students that, in these exceptional circumstances, face this matter with a responsible and honest behaviour. It will consider inadmissible any form of copy directed to false the level of knowledges and skills reached in the preparation of the homeworks, as well as during the virtual examination. If there is some suspicion of some type of fraudulent behaviour, will be able to subject to the students to an additional control to check his veracity.
