Educational guide 2018 / 2019

Universida_{de}Vigo

Presentation

The studies of Chemistry have a large tradition at the University of Vigo, where it has been taught during more than 30 years. The stablisment of the Universitary System of Galicia in the 90s and the current process of implantation of the European Space of Higher Education (EEES) modified the offer of degrees, but no the pioneering spirit of the chemists in research of in the quest for a better service to the society.

Degrees given in the Faculty

Degree in Chemistry

- Masters And Doctorates:
 - o Industry and Chemical Research and Industrial Chemistry
 - o Theoretical chemistry and Computational Modelling
- Master:
 - o Science and Technology of Conservation of Fishing Products

Code

- A1 Students have demonstrated knowledge and understanding in a field of study that builds upon their general secondary education, and is typically at a level that, whilst supported by advanced textbooks, includes some aspects that will be informed by knowledge of the forefront of their field of study
- A2 Students can apply their knowledge and understanding in a manner that indicates a professional approach to their work or vocation, and have competences typically demonstrated through devising and sustaining arguments and solving problems within their field of study
- A3 Students have the ability to gather and interpret relevant data (usually within their field of study) to inform judgments that include reflection on relevant social, scientific or ethical issues
- A4 Students can communicate information, ideas, problems and solutions to both specialist and non-specialist audiences
- C4 Demonstrate knowledge and understanding of essential facts, concepts, principles and theories: Basics and tools for solving analytical problems and characterization of chemical substances
- C8 Demonstrate knowledge and understanding of essential facts, concepts, principles and theories: main techniques for structural determination, including spectroscopy
- C12 Demonstrate knowledge and understanding of essential facts, concepts, principles and theories: structural features of chemical elements and their compounds, including stereochemistry
- C19 Apply knowledge and understanding to solve basic problems of quantitative and qualitative nature
- C20 Evaluate, interpret and synthesize data and chemical information
- C24 Recognize and analyze new problems and plan strategies to solve them
- D1 Communicate orally and in writing in at least one of the official languages of the University
- D3 Learn independently
- D4 Search and manage information from different sources
- D5 Use information and communication technologies and manage basic computer tools
- D7 Apply theoretical knowledge in practice
- D8 Teamwork
- D9 Work independently
- D12 Plan and manage time properly
- D13 Make decisions
- D14 Analyze and synthesize information and draw conclusions
- D15 Evaluate critically and constructively the environment and oneself
- D16 Develop an ethical commitment

Methodologies	
	Description
Lecturing	The theoretical classes will be devoted to the presentations of the basis of the different techniques that are are most relevant for the interpretation of the data from the structural point of view (relationships between spectra and structures).
Problem solving	The classes of small groups will be devoted to solve exercises or problems that allow at the end of each chapter to obtain appropriate information of the corresponding techniques.

Personalized attention				
Methodologies	Description			
Problem solving	Students may consult any doubt with the teaching staff of the subject in mentoring time.			
Tests	Description			
Essay	Students may consult any doubt with the teaching staff of the subject in mentoring time. In addition, students will be called individually or in small groups for mentoring of the work proposed.			

Assessmer	nt		
	Description	Qualification	Training and Learning Results
Problem solving	In the different classes (lectures, seminars) the students will be given handouts with problems and/or exercises that will be used for their evaluation. Learning outcomes: (1). Describe the fundamental concepts of the methods for structural determination. (2). Analyse the information that, on the molecular structure, provide the different methods and understand their main limitations. (3). Predict the basic features of a particular spectrum for a given compound.		A1 C4 D7 A2 C8 D8 A3 C12 D13 C19 D15 C20 C24
Laboratory practice	There will be two short tests of about 2 hour duration in which the students will be asked to obtain structural information from experimental data (spectra and other physical data). The first tests covers chapters 1-3 (10% of qualification), and the second chapter 4 (20% of qualification). Learning outcomes: (1). Analyse the information that, on the molecular structure, provide the different methods and understand their main limitations. (2). Predict the basic features of a particular spectrum for a given compound. (3) Design the basic process to obtain a particular structural information of a compound. (4). Solve the molecular structure of a simple compound from its spectra (UV, IR, MS, NMR, X-Ray, etc). Further, there will be a final test that covers all chapters (30% of qualification)		A1 C8 D3 A2 C12 D7 A3 C19 A4 C20 C24
Essay	The students will carry out a small project proposed by the professors of multidisciplinary spectroscopic nature. The results will be presented as a written report. Learning outcomes:(1). Solve the molecular structure of a simple compound from its spectra (UV, IR, MS, NMR, X-Ray, etc).		A1 C4 D1 A2 C8 D4 A3 C12 D5 A4 C19 D9 C20 D12 C24 D14 D16

Other comments on the Evaluation

To pass the course the students must handle the professor the following material:

- A minimum of 80% of the handouts and homework proposed in the seminar classes.
- All the short tests.
- The final report.

To pass the course at the end of the quarter the students will be required to get a minimum of 5 points (on the basis of 10) in the final mark. Besides, it is indispensable to obtain in the evaluation of the different parts of the course the following minima:

- 30% of the total value in each one of the short tests.
- 40% of the total value in the group of the handouts.

- 30% of the total value in the final test.

In the event the minima is not reached, the student record will show the balanced mark of the short tests.

For students that complete less than 20% of the total work scheduled, the records will not show, in agreement with the current legislation and, the quotation NOT PRESENTED. In any case, the presentation to one of the short tests, will imply the qualification of the course.

The students that fail at the end of the quartet will have to pass a final exam at the end of the academic year (June, July). Said proof will replace the results of the final tests. A minimum of 30% of the total value of the exam will be required to pass the course. The qualifications of the handouts and the project report are non-recoverable. In case the minima established in each part is not reached, the qualification will be FAILED. Once the minima is passed a global mark equal or higher than 5.0 (on the basis of 10) will be required to pass the course.

The final qualification of the students that pass the course will be normalised to 10 points.

Code

- C1 Demonstrate knowledge and understanding of essential facts, concepts, principles and theories: Major aspects of chemical terminology, nomenclature, units and unit conversions.
- C16 Demonstrate knowledge and understanding of essential facts, concepts, principles and theories: principles and procedures in chemical engineering
- C19 Apply knowledge and understanding to solve basic problems of quantitative and qualitative nature
- C20 Evaluate, interpret and synthesize data and chemical information
- C21 Recognize and implement good scientific practices for measurement and experimentation
- C22 Process and perform computational calculations with chemical information and chemical data
- C23 Present oral and written scientific material and scientific arguments to a specialized audience
- C25 Handle chemicals safely, considering their physical and chemical properties, including the evaluation of any specific risks associated with its use
- C27 Monitor, by observation and measurement of physical and chemical properties, events or changes, and document and record them in a consistent and reliable way
- C28 Interpret data derived from laboratory observations and measurements in terms of their significance and relate them to the appropriate theory
- C29 Demonstrate skills for numerical calculations and interpretation of experimental data, with special emphasis on precision and accuracy
- D1 Communicate orally and in writing in at least one of the official languages of the University
- D3 Learn independently
- D4 Search and manage information from different sources
- Use information and communication technologies and manage basic computer tools
- Use mathematics, including error analysis, estimates of orders of magnitude, correct use of units and data representations
- D7 Apply theoretical knowledge in practice
- D8 Teamwork
- D9 Work independently
- D10 Work at a national and international context
- D12 Plan and manage time properly
- D13 Make decisions
- D14 Analyze and synthesize information and draw conclusions
- D15 Evaluate critically and constructively the environment and oneself

Contents	
Topic	
Subject 1. Introduction to Chemical Engineering	Origin, concept and evolution of the Chemical Engineering. Discontinuous and continuous operation. Stationary and non stationary state. Cocurrent and countercurrent operations. Classification of the unit operations. Systems of units.
Subject 2. Mass and energy balances	General equation of balance. Mass balances in systems without chemical reaction in stationary and non stationary state. Recycle, purge and bypass. Mass balances in systems with chemical reaction in stationary and non stationary state. Energy balances. Energy balances in systems with chemical reaction in stationary state.
Subject 3. Design of ideal reactors	Speed of reaction. Ideal reactors: batch stirred tank reactor, continuos stirred tank reactor and plug flow reactor
Subject 4. Heat transfer	Mechanisms of heat transfer. heat transfer through flat walls, cylindrical and spherical. Heat exchangers.
Subject 5. Distillation	Vapour-liquid equilibria. Phase diagrams for binary mixes. Simple and flash distillation. Multistage distillation
Subject 6. Liquid-liquid extraction	Liquid-liquid equilibrium for binary and ternary systems: binodal curve and distribution coefficients. Liquid-liquid extraction in cocurrent and countercurren contact.
Laboratory sessions	Experimental determination of some properties of interest from the point of view of the design of basic operations: viscosity, coefficients of convection, density. Operation with chemical reactors at lab scale. Experimental determination of phase equilibrium curves. Analysis of the capacity of extraction of several solvents in a process of solid-liquid extraction.

*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies	
	Description
Lecturing	During these classes (one hour per week) the teacher will explain the most relevant aspects of the subject. The students will have the available documentation on Tem@.
Problem solving	There will be a set of exercises of each subject available for the students. Some of these exercises will be solve in class and other ones will be solved by each student and presented to the teacher in order to be corrected.
Laboratory practices	Laboratory sessions will last 3.5 hours. The experimental procedure will be available for the students and they will have to write a report for each session.
Autonomous problem solving	The students will have to solve some exercises and questions and they will have to present them to the teacher before the deadline.
Presentation	The students will have to make an oral presentation related to the theoretical bases, experimental procedure, obtained results and conclusions for some of their laboratory sessions.

The students will have to write an individual report about one subject related to Chemical Engineering. The teacher will indicate them the main points of the subject that they will have to develop and the recommended literature.

Personalized attention		
Methodologies	Description	
Problem solving	In the assigned hours of tutoring the professor will solve any doubts regarding the subject	
Autonomous problem solving	In the assigned hours of tutoring the professor will solve any doubts regarding the subject	
Supervised work	In the assigned hours of tutoring the professor will solve any doubts regarding the subject	

Assessment				
	Description	Qualification		ing and g Results
Laboratory practices	The qualification will depend on the laboratory work and the laboratory report made by the students. Laboratory sessions are mandatory.	10	C21 C22 C23 C25 C27 C28 C29	D1 D6 D8 D10 D12 D13 D14 D15
Autonomous problem solving	The students will have to deliver, in the terms indicated, the problems proposed of each subject.	5	C1 C16 C19 C22	D3 D7 D9
Presentation	The students will make an oral presentation related to laboratory work	. 5	C16 C20 C23	D4 D5 D7 D8 D14
Supervised work	The students will realise, and will deliver in the date indicated, an individual work on a subject proposed to the start of course.	5	C1 C16 C20 C23	D1 D3 D14
Short answer tests	They will realise two short exams, one about the subjects 1 and 2 and another one about the subjects 3 and 4.	20	C1 C16 C19	D1 D6 D7 D9
Essay questions exam	At the end of the course the students have to do an exam related to al the subjets.	55	C1 C16 C19	D1 D6 D7 D9

Other comments on the Evaluation

Short and long exams. They will realise two short exams along the term. In the final exam, all topics will be evaluated and it is necessary to reach a minimum of 3 out of 10 points to take into account the other elements of evaluation. In case of not reaching the minimum note, the final qualification will be the one obtained in the long exam. Laboratory sessions. The laboratory sessions (lab work and report) and the oral presentation are mandatory and they are 15% of the final qualification. It is indispensable to have a minimum grade of 5 out of 10 points in this section. 50% or more laboratory sessions non-attendance means not to pass the course, independently of the results obtained in the other elements of evaluation. The participation of the student in any of the exams (short exams and long exam), two or more laboratory sessions or the delivery of 20% or more of the works required by the professor, involves the condition of "presented" and the obtention of a qualification. June final exam. A long exam of all the matter that will suppose 75% of the qualification will be done. The students will keep the grades of obtained in laboratory sessions, oral presentation, autonomus exercices and tutored work obtained along the course.

^{*}The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies	
	Description
Problem solving	Following the master classes, seminars be dedicated to solving problems / exercises, which aims are to finding the comprehension level of the students on issues developed. The exercises will be develop in small groups in seminars session followed a general discussion, later the student will have individual proposes exercises to solve individually. The seminars are aimed at strengthening the knowledge acquired in the lectures class, Practical analytical issues and related to the content of the subject will be discussed.
Laboratory practices	The laboratory practical sessions have a fundamental part in the teaching of the subject. On the one hand, they are essential for understanding theoretical concepts; and also allows the students to introduce on analytical methodology practical concepts, as well to understand the norms and rules of scientific work, individual and work group concept in laboratory including report writing.
Lecturing	Lecture sessions will develop during 60 minutes. The teacher provides a global vision of each agenda item, stating the main contents of each. Classes are held interactive way with the students, using online learning materials (Tem @ platform) and adequate literature.

Assessment				
	Description	Qualificatio	Lea	ing and rning sults
Problem solvir	ngThe teacher will monitor the exercises given to students in seminars class. Scientific publication, pratical situations will be discussed in seminars sessions and supervised by the teacher	10	C4 C8 C18 C29	D1 D6
Laboratory practices	The teacher will monitor the experimental work done by students in the lab sessions. It is REQUIRED to attend practical laboratory sessions to pass the course. Students who do not perform laboratory practices are considered FAIL throughout the cycle of evaluation of the course.	15	C20 C21 C25 C26 C27 C28	D4 D7 D8 D13
Practices repo	rt The student will prepare lab reports, which reflects the work performed in the laboratory. These reports must be submitted by the deadline and will be corrected by the teacher.	10	C17 C19 C20 C28 C29	D1 D4 D6 D7 D14
Short answer tests	The theoretical/practical short test will be used during semester evaluation. This test is not eliminatory and will contribute 10% of the final grade for the course. Labotory test for each student will be made to asses their skills in the development of an experiment. This test is performed at the end of the lab sessions and it contribute 10% to the final score.	20	C4 C8 C18 C19 C20 C21 C25 C26 C27 C28	D1 D3 D6 D7 D9

Essay questio	nsThe exam (the test) will be performed at the end of the semester and contains a	45	C4	D1
exam	theoretical and theoretical-practical aspects.		C8	D3
	For compensation of subject, students must achieve at least 4.0 minimum score		C17	D6
	(4.0 minimum score in each part of the test).		C18	D9
			C19	
	ATTENTION: 3.0 is the minimal requirement in the final results achieve by the			
	student for each long test corresponding to each teacher participate in the subject			
	in order to carry out the weighting of overall examination. If you do not get this			
	rating, the end result is FAIL			

Omission of ALL activities proposed for the evaluation of the subject (Not participated all evaluation activities) for the evaluation of the subject will be considered as NOT PRESENTED (NO EVALUATION). Attendance at laboratory practices class is mandatory and eliminatory. If the participation in these activities is less than 80%, TOTAL results in subject evaluation will be FAIL (SUSPENSO); in this case, the final official result will be the value only obtained for laboratory evaluatio.

- July evaluation:

In the second evaluation, the same criteria than in the first one will be applied.

- A1 Students have demonstrated knowledge and understanding in a field of study that builds upon their general secondary education, and is typically at a level that, whilst supported by advanced textbooks, includes some aspects that will be informed by knowledge of the forefront of their field of study
- A2 Students can apply their knowledge and understanding in a manner that indicates a professional approach to their work or vocation, and have competences typically demonstrated through devising and sustaining arguments and solving problems within their field of study
- A3 Students have the ability to gather and interpret relevant data (usually within their field of study) to inform judgments that include reflection on relevant social, scientific or ethical issues
- A5 Students have developed those learning skills that are necessary for them to continue to undertake further study with a high degree of autonomy
- C2 Demonstrate knowledge and understanding of essential facts, concepts, principles and theories: types of chemical reactions and its main characteristics
- C8 Demonstrate knowledge and understanding of essential facts, concepts, principles and theories: main techniques for structural determination, including spectroscopy
- C10 Demonstrate knowledge and understanding of essential facts, concepts, principles and theories: properties of aliphatic, aromatic, heterocyclic and organometallic compounds
- C11 Demonstrate knowledge and understanding of essential facts, concepts, principles and theories: nature and behavior of functional groups in organic molecules
- C12 Demonstrate knowledge and understanding of essential facts, concepts, principles and theories: structural features of chemical elements and their compounds, including stereochemistry
- C13 Demonstrate knowledge and understanding of essential facts, concepts, principles and theories: main synthetic routes in organic chemistry, including interconversions of functional groups and the formation of carbon-carbon and carbon-heteroatom bonds
- C19 Apply knowledge and understanding to solve basic problems of quantitative and qualitative nature
- C20 Evaluate, interpret and synthesize data and chemical information
- C23 Present oral and written scientific material and scientific arguments to a specialized audience
- Of Communicate orally and in writing in at least one of the official languages of the University
- D3 Learn independently
- D4 Search and manage information from different sources
- D5 Use information and communication technologies and manage basic computer tools
- D8 Teamwork
- D9 Work independently
- D12 Plan and manage time properly
- D13 Make decisions
- D14 Analyze and synthesize information and draw conclusions

Methodologies	
	Description
Supervised work	The student, of individual form or in group, will prepare a short exhibition on a subject *realacionado with the matter. This activity includes the research of information, editorial and presentation of the work.

Lecturing	The sessions *magistrales will consist in the exhibition by part of the professor of the fundamental appearances of each subject. Before each session, the student will have to work the material that the professor will facilitate him through the platform FEAR, related with the content that will treat in each session.
Seminars	The students, with the support of the professor, will resolve exercises and questions previously proposed in Bulletins, related with the theoretical contents. A selection of the exercises will be delivered regularly to the professor for his evaluation.

Personalized at	Personalized attention		
Methodologies	Description		
Seminars	The professors will devote a time to attend the needs and queries of the students related with the study and the resolution of exercises on the subjects linked with the matter. The day of the presentation the professors will inform on his time availability for this.		
Supervised work	The students will realise a work on a subject that *eligirán of a series proposed by the professors, once finalised, in hours of seminar will expose it and will answer to the questions that formulate him the professors and/or the students. The professors will be able to *asesorar to the student in the election and development of the subject, in the distribution, *busqueda bibliographic and presentation		

Assessment			
	Description	Qualification	
			Learning
			Results
Supervised work	It will value the preparation and presentation of a work on a subject proposed by the professor related with the theoretical content of the *asignatura.	5	C2 D1 C8 D3 C10 D4 C11 D5 C12 D9 C13 D12 C19 D13 C20 D14 C23
Seminars	In the classes of seminar will value the participation and the resolution of the previously proposed problems by the professor. A selection of the exercises will be resolved individually in the classroom and delivered regularly to the professor for his evaluation.	10	C2 D1 C8 D3 C10 D4 C11 D5 C12 D8 C13 D9 C19 D12 C20 D13 C23 D14
Short answer tests	They will realise two proofs of short answer: the first when finalising the Subject IV and the second when finalising the Subject IV. The first will constitute 20% of the total qualification, and the second 15%.	40	C2 D1 C8 D3 C10 D4 C11 D5 C12 D9 C13 D12 C19 D13 C20 D14 C23
Essay question exam	is It will consist in a global proof on all the contents of the matter. It will be necessary to reach a minimum of 4 points on 10 in this proof to surpass the matter and to take into account the rest of the elements of evaluation. It will realise when finalising he *cuatrimestre.	45	C2 D1 C8 D3 C10 D4 C11 D5 C12 D9 C13 D12 C19 D13 C20 D14 C23

IMPORTANT NOTES:

1. In the long proof final will evaluate the whole of the *asignatura. It will be necessary to reach in this proof a minimum of 4 points on 10 to surpass the matter and to take into account the rest of the elements of evaluation.

2. A selection of the exercises of the bulletins will be resolved individually in the classroom and delivered regularly to the professor for his evaluation. Those students that by fault of assistance to class, do not deliver a minimum of 80% of these exercises, will not be able to present to the final proof.

CONDITION OF PRESENTED/To: The participation of the student in any one of the proofs written will involve the condition of presented/to and therefore the allocation of qualification.

EVALUATION IN THE ANNOUNCEMENT OF JULIO:

1. Punctuation obtained by the student during the course: Máximo 3.0 points.

It will keep the qualification obtained by the student during the course in works *tutelados (maximum 0.5 points), proofs of short answer (maximum 2.5 points).

2. Proof written: Máximo 7.0 points.

It will realise a proof of long answer on all the contents of the matter to which will assign a maximum of 7.0 points on 10.

The participation of the student in any one of the activities evaluated (deliveries of problems and exercises, proofs of short answer) *inhabilita to the student to obtain the qualification of NO PRESENTED. To surpass the short proofs as well as the long proof (final examination), will be necessary that exist a balance in the qualifications of the theoretical part and of the

ANNOUNCEMENT OF JULIO: The qualification in this announcement will be formed by two components: 1. Punctuations obtained by the student during the course (maximum 5 points) They will keep the qualifications in the works *tutelados (maximum 0.5 points), problems/exercises resolved (maximum 1 point) and short proofs (maximum 3.5 points).

2. Global written proof of the contents of the matter (maximum 5 points) This proof will include problems, exercises and ask type test. To be able to approve in this announcement, the student has to obtain at least 3 points on 10 in this proof. The presentation to this proof *inhabilita to the student to obtain the qualification of NO presented.

General	Introductory course of Biochemistry, global and	integrated knowledge	of the molecula	ar mechanisms
description	responsible of biological processes.	-		

Code

- A1 Students have demonstrated knowledge and understanding in a field of study that builds upon their general secondary education, and is typically at a level that, whilst supported by advanced textbooks, includes some aspects that will be informed by knowledge of the forefront of their field of study
- A2 Students can apply their knowledge and understanding in a manner that indicates a professional approach to their work or vocation, and have competences typically demonstrated through devising and sustaining arguments and solving problems within their field of study
- A3 Students have the ability to gather and interpret relevant data (usually within their field of study) to inform judgments that include reflection on relevant social, scientific or ethical issues
- A5 Students have developed those learning skills that are necessary for them to continue to undertake further study with a high degree of autonomy
- C4 Demonstrate knowledge and understanding of essential facts, concepts, principles and theories: Basics and tools for solving analytical problems and characterization of chemical substances
- C15 Demonstrate knowledge and understanding of essential facts, concepts, principles and theories in: chemistry of biological molecules and their processes
- C19 Apply knowledge and understanding to solve basic problems of quantitative and qualitative nature
- C21 Recognize and implement good scientific practices for measurement and experimentation
- C23 Present oral and written scientific material and scientific arguments to a specialized audience
- C25 Handle chemicals safely, considering their physical and chemical properties, including the evaluation of any specific risks associated with its use
- C26 Perform common laboratory procedures and use instrumentation in synthetic and analytical work
- C27 Monitor, by observation and measurement of physical and chemical properties, events or changes, and document and record them in a consistent and reliable way
- C28 Interpret data derived from laboratory observations and measurements in terms of their significance and relate them to the appropriate theory
- D1 Communicate orally and in writing in at least one of the official languages of the University
- D3 Learn independently
- D4 Search and manage information from different sources
- D5 Use information and communication technologies and manage basic computer tools
- D7 Apply theoretical knowledge in practice
- D8 Teamwork
- D9 Work independently
- D12 Plan and manage time properly
- D13 Make decisions
- D14 Analyze and synthesize information and draw conclusions
- D15 Evaluate critically and constructively the environment and oneself

Learning outcomes

Expected results from this subject	Tr	aining an Res	nd Learning ults
Identify and recognise the structure of the distinct types of *biomoléculas and represent them properly, recognise his properties and his chemical reactivity.	A1 A3	C15	D1 D3 D4 D5 D7 D8 D9 D12 D13 D14 D15
Recognise the distinct biological activities of the diverse types of *biomoléculas	A1 A3	C15	D1 D3 D4 D5 D7 D8 D9 D12 D13 D14 D15
Define the kinetical enzymatic of reactions *catalizadas by enzymes as well as his general mechanisms. Recognise the distinct types of inhibition of the enzymatic activity and his quantification	A1 A3	C4 C15	D1 D3 D4 D5 D7 D8 D9 D12 D13 D14 D15
Relate the vitamins with the corresponding *coenzimas of enzymatic reactions	A1 A3	C15	D1 D3 D4 D5 D7 D8 D9 D12 D13 D14 D15
Explain he concept of *Bioenergética. Reason conceptually the importance of him attachment of the processes *endergónicos and *exergónicos in the biological systems	A1 A3	C15	D1 D3 D4 D5 D7 D8 D9 D12 D13 D14 D15
Enumerate the main structural appearances of the ATP that determine his paper in the transfer of energy. Describe the cycle of the ATP.	A1 A3	C15	D1 D3 D4 D5 D7 D8 D9 D12 D13 D14 D15

Explain the foundations of the current technicians of *proteómica and molecular biology in relation A1 C4 D1 with the isolation, separation, purification, determination, identification and manipulation of A2 C15 D3 D4 D5 D5 D7 D7 D8 D8 D9 D12 D12 D13 D14 D15	Distinguish the metabolic roads of the *biomoléculas, as well as his interrelationships and regulation	A1 A3	C15	D1 D3 D4 D5 D7 D8 D9 D12 D13 D14
instrumental technicians in the analysis of *biomoléculas	with the isolation, separation, purification, determination, identification and manipulation of	A2		D1 D3 D4 D5 D7 D8 D9 D12 D13 D14
Distinguish the main operations involved in the commercial production of *biomoléculas, as well as A1 C15 D1 his foundations. Recognise the possible practical applications of *biomoléculas, with special A2 C21 D3 emphasis in the characteristic operational conditions A3 C23 D4 A5 C25 D5 C26 D7 C27 D8 C28 D9 D12 D13 D14 D15 Distinguish and pose analytical protocols of application of the previously mentioned technicians to A1 C4 D1 the analysis of *biomoléculas in diverse areas (clinical, pharmaceutical, *biomédica, etc.) A2 C15 D3 A3 C19 D4 A5 C21 D5 C23 D7 C25 D8 C26 D9 C27 D12 C27 D12 C28 D13 D14	instrumental technicians in the analysis of *biomoléculas	A2	C15 C19 C21 C23 C25 C26 C27	D3 D4 D5 D7 D8 D9 D12 D13 D14
Distinguish and pose analytical protocols of application of the previously mentioned technicians to A1 C4 D1 the analysis of *biomoléculas in diverse areas (clinical, pharmaceutical, *biomédica, etc.) A2 C15 D3 A3 C19 D4 A5 C21 D5 C23 D7 C25 D8 C26 D9 C27 D12 C28 D13 D14	his foundations. Recognise the possible practical applications of *biomoléculas, with special emphasis in the characteristic operational conditions	A2 A3	C21 C23 C25 C26 C27	D3 D4 D5 D7 D8 D9 D12 D13 D14
	the analysis of *biomoléculas in diverse areas (clinical, pharmaceutical, *biomédica, etc.)	A2 A3	C15 C19 C21 C23 C25 C26 C27	D1 D3 D4 D5 D7 D8 D9 D12 D13 D14

Contents	
Topic	
1.Biomolecules	Structure and structure-function relationship of biomolecules: proteins, carbohydrates, lipids and nucleic acids.
2.Biocatalisis	Structure and function of enzymes. Enzymatic reactions. Enzymatic kinetics.
3.Vitamins and coenzymes	Structure and function of vitamins and coenzymes in metabolic reactions.
4.Metabolism of glucides	Degradative Metabolism of glucides: glycolysis. Metabolic crossroad of pyruvate. Degradative Oxidation of acetil-CoA. Respiratory chain and oxidative phosphorylation. Oxidative Route of the pentoses phosphate. Gluconeogénesis. Metabolism of glycogen.

5. Metabolism of lipids	Degradation of lipids: oxidation of fatty acids.
	Biosynthesis of fatty acids.
6. Metabolism of proteins	Proteolisis.
	Degradation of amino acids.
	Destination of the ion ammonium.
	Biosynthesis of amino acids.
7.Metabolism of nucleotides	Degradation of nucleic acids and nucleotides.
	Biosynthesis of nucleotides.
8.Experimental methods in Biochemistry	Techniques for synthesis and isolation of biomolecules.
	Separation, determination and identification of proteins.
	Determination and quantification of lipids.
	Determination and quantification of glycogen.
	Evaluation of the enzymatic activity. Effect of the temperature and
	inhibition.
	Polymerase chain reaction.
	Use of restriction enzymes.

Class hours	Hours outside the classroom	Total hours
13	19.5	32.5
45.5	68.25	113.75
3	3	6
26	26	52
6	9	15
2.3	3.45	5.75

^{*}The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies	
	Description
Seminars	They formulate , they argue and they resolve questions, related with the matter.
Laboratory practices	They will propose questions practise, to resolve in the laboratory.
Problem solving	Activity in which they formulate problems and/or exercises related with the matter. The student has to develop the suitable or correct solutions by means of the realisation of routines, the application of formulas or algorithms, the application of procedures of transformation of the available information and the interpretation of the results. It is used to employ as I complement of the magistral lesson.
Lecturing	Exhibition by the professor of the contents on the matter object of study, theoretical bases and/or guidelines of a work, exercise or project to develop by the student.

Personalized attent	
Methodologies	Description
Seminars	The professor will resolve the doubts of the students for the good development of the activities proposed
Laboratory practices	The professor will resolve the doubts of the students for the good development of the activities proposed
Problem solving	The professor will resolve the doubts of the students for the good development of the activities proposed

Assessment				•
	Description	Qualification	Training Learning	
Seminars	Class participation and resolution of proposed problems will be evaluated.	10	C4 C15 C19 C23	D3 D4 D8 D12 D14 D15

Laboratory practices	Assistance to practical classes will be evaluated. Application of instrumental techniques learned in the laboratory sessions and resolution of the proposed problems will be evaluated.	30	A1 A2 A3 A5	C15 C19 C21 C25 C26 C27 C28	D3 D7 D9 D12 D13 D14
Short answer tests Two short tests (with 25% and 15% values respectively) and one long test will be evaluated.		60	A1 A3	C4 C15	D1 D3 D4 D9 D12 D14

The final grade will be calculated taking into account: seminars (10%), laboratory practices (30%) and tests (60%). The short tests will have eliminatory character, as long as they reach the minimum value each of 5, subtracting its percentage corresponding to the value of the long test.

Attendance at laboratory sessions is mandatory. The lack of assistance, even if justified, will penalize the final grade. An attendance lower than 75% of the laboratory sessions supposes the qualification of suspense.

The non-performance of any test throughout the academic course and the failure to attend the long test will be considered as not presented.

For the evaluation of July, a global test will be carried out, with a value of 70% in the final grade, maintaining the remaining 30% for the qualification obtained in the laboratory practices, if they are approved. If 75% of the laboratory sessions have been completed and the minimum mark has not been achieved, an examination of recovery of the laboratory practices may be carried out in July.

- D4 Search and manage information from different sources
- Use information and communication technologies and manage basic computer tools
- Use mathematics, including error analysis, estimates of orders of magnitude, correct use of units and data representations
- D7 Apply theoretical knowledge in practice
- D8 Teamwork
- D9 Work independently
- D14 Analyze and synthesize information and draw conclusions
- D15 Evaluate critically and constructively the environment and oneself

Learning outcomes		
Expected results from this subject	Train	ing and Learning
		Results
Explain the hypotheses, the consequences and the fundamental results of the Molecular Kinetical	C7	D1
Theory of the gases	C14	D3
	C19	D4
	C23	D9
Describe the general mechanism of the process of transport and *particularizarlo for the transport	C7	D1
of distinct physical properties. Comprise the origin of the ionic conductivity. Know apply this	C14	D3
knowledge to the determination of thermodynamic parameters like constants of balance,	C19	D4
coefficients of activity or others like molar conductivities limit.	C23	D9

Define with precision, all the basic concepts in Kinetical Chemical, and know the distinct methods of analysis of data to obtain equations of speed.	C7 C19 C23	D1 D3 D4 D9
Establish the kinetical behaviour of complex reactions and apply the most usual approximations in kinetical chemical. Obtain equations of speed of complex processes from the corresponding mechanisms. Distinguish between complexes of Arrhenius and van't Hoff and know realise a kinetical treatment-formal general for both cases.	C14 C19	D1 D3 D4 D9
Describe the foundation of the distinct experimental technicians available for the kinetical study of the chemical reactions.	C20 C27 C28	D1 D3 D4 D9
Be able to carry out the analysis of kinetical data, including the ones of complex reactions and relate the same with the mechanisms of reaction.	C7 C19 C27	D1 D3 D4 D7 D9
Explain the fundamental hypotheses of the distinct theories on the chemical change, as well as the results and the limitations of each one of them (Theory of Collisions and Theory of the State of Transition and know apply them like tool in the analysis of kinetical results).	C14 C19	D1 D3 D4 D9
Describe the distinct types of *catálisis, explain the mechanism of the reactions *catalizadas and apply it to concrete cases. Know *particularizar said kinetical treatment-formal to the distinct types of *catálisis	C7 sC19	D1 D3 D4 D9
Know the basic structure of the *interfase energised and his applications to the study of the stability of the colloids and of the processes in the *interfases *electródicas.	C7 C14 C19	D1 D3 D4 D9
Explain the principles that govern the phenomena of adsorption on solid surfaces and distinguish the types. Comprise the origin of the distinct isotherms of adsorption and know apply them to concrete problems.	C14 C19	D1 D3 D4 D9
Explain the nature and structure of the macromolecules in dissolution and the most representative models for his description.	C14 C19	D1 D3 D4 D9
Describe with clarity the nature and the distinct types of systems *coloidales. Comprise the basic appearances of the thermodynamic treatment of the macromolecular dissolutions.	C14 C19	D1 D3 D4 D9
Describe the foundation of the experimental technicians more important for the determination of the structure of *macromoleculas and systems *coloidales.	C14 C27	D1 D3 D4 D9
Describe the structure and explain the causes of the stability of the systems *coloidales as well as recognise his chemical importance.	C14 C19	D1 D3 D4 D9
Know the basic appearances of the structure of the *interfase *electródica, the origin of the distinct types of *sobrepotencial and his application.	tC7 C14 C19	D1 D3 D4 D9
Apply the distinct basic technicians in the field of the kinetical for the determination, between others, of equations of speed and energies of activation. Determine experimentally properties associated to the phenomena of transport and superficial and the structure of the macromolecules and systems *coloidales.	C19 C20 C21 C22 C26 C27	D1 D4 D5 D6 D7 D8
	C28 C29	D9 D14 D15

Contents	
Topic	
(*)Phenomena of transport	(*)Kinetical theory of the gases. Phenomena of transport no electrical.
	Phenomena of electrical transport: conductivity

(*)Phenomena of surface	(*)Superficial tension. Structure of the solid surfaces. Adsorption on solid surfaces. *Fisisorción And *quimisorción: models. The *interfase energised.
(*)Kinetical formal	(*)Speed of reaction and equations of speed. Analysis of data. Kinetical analysis of complex reactions. Mechanisms. Influence of the temperature in the speed of reaction.
(*)Experimental methods in Kinetical Chemical	(*)Transformation of the equations of speed. Conventional technicians. Experimental technicians for the study of fast reactions.
(*)Theoretical interpretation of the speed of reaction.	(*)Theory of collisions for reactions *bimoleculares. Theory of the state of transition.
(*)Macromolecules.	(*)Structure of the macromolecules. Structural models. Characterisation of macromolecules.
(*)Colloids.	(*)Classification of the systems *coloidales. Synthesis and characterisation of colloids. Stability of systems *coloidales.
(*)*Catálisis.	(*)General mechanism of the *catálisis. *Catálisis *homogénea. *Catálisis Heterogeneous.
(*)Kinetical *electródica.	(*)Stages of a process *electródico. *Sobrepotenciales. *Sobrepotencial Of transfer of load. *Sobrepotencial Of diffusion. *Sobrepotenciales Of reaction and crystallisation. Experimental technicians.
(*)Practical.	(*)Experiences of Kinetical Chemical including *Catálisi, Phenomena of Transport, Electrochemical Macromolecules and Colloids.

	Class hours	Hours outside the classroom	Total hours
Lecturing	26	0	26

^{*}The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies	
	Description
Lecturing	Lesson by the method *expositivo *desarrolada in a classroom. They can pose simple exercises
	*directamentamente related *on the explanation.
Seminars	Approach, analysis and discussion of problems and questions of some complexity.
Laboratory practices	Realization under the supervision of Professor (but of autonomous way) of laboratory practises
	related whith the matter.

Personalized attention				
Methodologies	Description			
Lecturing	Resolution of doubts on the proportionate explanations in classes.			
Seminars	Resolution of doubts on the proportionate explanations in classes.			
Laboratory practices	Those questions of students that may arise during the realization of laboratory practices or the corresponding reports will be resolved individually in the teacher tutoring schedule.			
Tests	Description			
Practices report	Those questions of students that may arise during the realization of laboratory practices or the corresponding reports will be resolved individually in the teacher tutoring schedule.			
Problem solving	Doubts and questions of problems and/or questions provided in classes.			

Assessment				
	Description	Qualification	Lea	ing and rning sults
Seminars	Presentation and discussion of exercises prior to the seminar will be evaluated	20	C7 C14 C19 C23	D1 D6 D7 D14

Laboratory practice	s It is scored here along with the effort and the attitude, the skills and the competences developed by the student during the accomplishment of the different practices. Attendance at practice sessions is mandatory and, therefore, it is not possible to pass the subject in case it has not taken place.	15	C19 C20 C21 C22 C23 C26 C27 C28 C29	
Short answer tests	Evaluation of acquired knowledge up to date with a small exam (questions, problems)	10	C7 C14 C19 C23	D1 D7
Short answer tests	Evaluation of acquired knowledge up to date with a small exam (questions, problems)	10	C7 C14 C19 C23	D1 D7
Essay questions exam	Final exam. Evaluation of the acquired knowledge: questions and problems	40	C7 C14 C19 C23 C28	D1 D7
Practices report	The presentation and quality of the experimental data obtained in experiments will be evaluated.	5	C19 C20 C21	
	Reports will necessarily include some discussion on the reported data.		C22 C23 C28 C29	

- The assistance to masterclasses, seminars and the realisation of the practices and the delivery of the corresponding reports is compulsory.

The notes of the seminars and practical of laboratory will keep for the second evaluation. Under special circumstances, students may be required to make a special work to improve the grades obtained.

The minimum note of the "official" (long) exam will be of 3.8 (in scale 0-10, 1.52 in scale 0-4) and of 3.0 (scale 0-10) in the short ones, so that the final grade will be an average (with the corresponding percentage) of the punctuations of all sections. To pass the topic, the global grade has to be, of course, equal to or higher than 5.0. There is not minimum punctuations in other sections, but presentation and discussion of exercises during the seminars is highly relevant and will be considered important.

Code

- C2 Demonstrate knowledge and understanding of essential facts, concepts, principles and theories: types of chemical reactions and its main characteristics
- C7 Demonstrate knowledge and understanding of essential facts, concepts, principles and theories: kinetics of change, including catalysis and reaction mechanisms
- C8 Demonstrate knowledge and understanding of essential facts, concepts, principles and theories: main techniques for structural determination, including spectroscopy
- C9 Demonstrate knowledge and understanding of essential facts, concepts, principles and theories: characteristic properties of the elements and their compounds, including group relationships and variations in the periodic table
- C12 Demonstrate knowledge and understanding of essential facts, concepts, principles and theories: structural features of chemical elements and their compounds, including stereochemistry
- C14 Demonstrate knowledge and understanding of essential facts, concepts, principles and theories: relationship between macroscopic properties and properties of individual atoms and molecules, including macromolecules

Learning outcomes		
Expected results from this subject	Train	ing and Learning Results
Classify ligands and coordination compounds, as well as recognize the presence of isomers.	C12	
Define the global and steps thermodynamic stability constants of one complex and describe the chelate, macrocyclic and cryptate effects	C2 C14	
Deduce the spectroscopic terms for stable electronic configurations of the transition metals in a coordination compound	C9	
Construct and interpret a qualitative energy diagram of molecular orbitals in octahedral complexe	s C12 C14	
Interpret the electronic spectra of octahedral, tetrahedral and square planar complexes of transition metals and rationalize their magnetic behavior	C8 C14	
Describe the different mechanisms of substitution and rationalize the various products obtained in substitution reactions in octahedral and square planar complex.	C7	
Describe how you can get metals from their natural resources	C9	
Being able to differentiate the behavior between the elements of the first transition series and the second and third.	C9	
Predicting the reactivity of the metal oxides, halides and of those of the coordination compounds based on the bond and on the oxidation state of the metal.	C9	
Rationalize the thermodynamic stability of coordination compounds, depending on the oxidation state of the metal and the type of ligand.	C9 C12	
	C14	

٠U	nte	nts

Topic

Subject 1: Introduction to the Chemistry of the transition metals.	Physical properties. Electronic configuration.
	Multielectrons Systems.
	Microstates and spectroscopic terms. Reactivity and characteristic properties.
	General methods of obtention and purification of metals
Subject 2: Coordination Chemistry.	Numbers and geometry of coordination.
Subject 2. Coordination Chemistry.	Ligand types.
	Isomerism in metal complexes.
	Nomenclature.
Subject 3: Bond in coordination compounds (I):	Theory of crystal field.
Crystal field theory	Complexes of weak and strong field. Tetrahedric and square-plane
	complexes.
Subject 4: Chemistry of the group 3 and 4 metals	
	Usual oxidation numbers.
	Representative compounds of titanium: halides, oxides and mixed oxides. Coordination compounds.
Subject 5: Chemistry of the group 5 metals.	Obtention methods and uses.
Subject 3. Chemistry of the group 3 metals.	Usual oxidation numbers.
	Representative compounds of vanadium: halides, oxides and mixed
	oxides.
	Coordination compounds.
Subject 6: Bond in coordination compounds (II).	Molecular orbital theory in octahedral complexes.
	Metal-ligand interaction.
Subject 7: Spectroscopic and magnetic propertie	
of the complexes.	Rules of selection.
	General characteristics of the electronic spectra.
Cohiant O. The manufacture of the	Magnetic behavior
Subject 8: Thermodynamic properties of the	Stability constants and affecting factors them. Chelate, macrocycle and
coordination compounds. Subject 9: Reaction mechanisms in coordination	crystate effects. Reactions of substitution in octahedral and square-plane complexes.
compounds.	Processes of electronic transfer
Subject 10: Chemistry of the group 6 metals.	Production methods and uses.
Subject 10. Chemistry of the group o metals.	Usual oxidation numbers.
	Representative compounds of chromium: halides, oxides and oxoanions.
	Coordination compounds.
Subject 11: Chemistry of the group 7 metals.	Production methods and uses.
	Usual oxidation numbers.
	Representative compounds of manganese: halides, oxides and oxoanions.
	Coordination compounds. Bioinorganic chemistry of manganese and
Cubicat 12. Chamistry of the group 0 motels	technetium.
Subject 12: Chemistry of the group 8 metals.	Production methods and uses. Usual oxidation numbers.
	Representative compounds of iron: halides, oxides and oxoanions.
	Coordination compounds. Bioinorganic chemistry of iron.
Subject 13: Chemistry of the group 9 metals.	Production methods and uses.
,	Usual oxidation numbers.
	Representative compounds of cobalt: halides, oxides and oxoanions.
	Coordination compounds. Bioinorganic chemistry of cobalt.
Subject 14: Chemistry of the group 10 metals.	Production methods and uses.
	Usual oxidation numbers.
	Representative compounds of nickel: halides, oxides and oxoanions.
Cobinet 15 Chamistan of the annual 11 models	Coordination compounds. Bioinorganic chemistry of platinum.
Subject 15: Chemistry of the group 11 metals	Production methods and uses. Usual oxidation numbers.
	Representative compounds of copper: halides, oxides and oxoanions.
	Coordination compounds. Bioinorganic chemistry of copper and gold.
Subject 16: Chemistry of the group 12 metals.	Production methods and uses.
	Usual oxidation numbers.
	Representative compounds of zinc and mercury: halides, oxides and
	oxoanions.
	Coordination compounds. Bioinorganic chemistry of the elements of the
	group.

classroom

Seminars	26	26	52
Lecturing	26	39	65
Short answer tests	2	2	4
Problem solving	0	21	21
Essay questions exam	4	4	8

^{*}The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies	
	Description
Seminars	Seminar classes will be devoted to the resolution of case studies related to the subject as well as the resolution of questions or issues that arise in the development of each topic. Beheld also hold seminars that address issues not taught in other courses but necessary for the progress of the course.
Lecturing	The lectures will be devoted to presenting the fundamental aspects.

Personalized attention			
Methodologies Description			
Lecturing	Throughout the educational period students can consult any doubts on the matter tutorials or previous appointment.		
Seminars	Throughout the educational period students can consult any doubts on the matter tutorials or previous appointment.		

Assessment		0	Tara tara
	Description	Qualification	and Learning Results
Seminars	In the lectures they may ask students to solve simple issues that will have to deliver at that time and will serve for the evaluation. The score will be considered only if the test is long reaches a score of 3 or above on 10 points.	10	C2 C7 C8 C12 C14
Lecturing	In the lectures they may ask students to solve simple issues that will have to deliver at that time and will serve for the evaluation. The score will be considered only if the test is long reaches a score of 3 or above on 10 points.	5	C2 C7 C8 C12
Short answer tests	There will be two short tests throughout the school period of 1-2 hours each. The score will be considered only if the test is long reaches a score greater than or equal to 3 points out of 10.	30	C2 C7 C8 C9 C12 C14
Problem solving	Throughout the course they ask students to do exercises to perform such work. The solutions must be submitted in a timely manner previously established. It is possible that the teacher ask the student to defend his response delivered before proceeding with the assessment. The score will be considered only if the test is long reaches a score greater than or equal to 3 points out of 10.	15	C2 C7 C8 C9 C12 C14
Essay questions exam	There will be a test at the end of the semester in which students must resolve all issues related to the presented contents.	40	C2 C7 C8 C9 C12 C14

Attendance at lectures and seminars is mandatory. The competencies of the subject relating to the competencies of the degree (A1-A3, A5, A10, A12 and A20) will be assessed explicitly in classroom exercises and written tests. The transferable skills will be evaluated implicitly by the qualification of the exercises (B2, B3 and B4).

To pass the course the professor must have time and form of a minimum of 80% of the exercises proposed in the various activities and presences. It is also mandatory for the student to present all written tests planned to pass the course. Will need a score greater than or equal to 30% of the total value in each of written tests (short and final) and the sum total of the qualifications of the deliverables to the final qualification note the rest of the elements of evaluation (exercises and

short tests). Failure to achieve any of the minimum, in the act appear the result of the tests and weighted exercises in which qualified reached criterion.

A student who performs over 20% of the total planned work or take any of the tests will be graded in accordance with the current regulations and, therefore, may not be in the act of gualifying NOT PRESENTED.

Students who fail the course at the end of the semester will take a written test in the closing period of evaluation in the final month of July. This test will be worth 40% of the mark and replace the test results at the end of the semester. The qualification of the exercises (classroom activities) and short tests are not recoverable.

The final of the students, to be more than 7 points can be normalized so that the highest score can be up to 10 points.
