General	The objective of Applied Electrotechnic is to				
description	Technologies Degree in what is related with				
	This subject will provide specific tools to ana		aviour of the m	ost usual electrical	
	installations under balanced and unbalanced				
	The subject is conceived also, to provide the		d competencies	to be able to follow some	
	subjects in the 3rd and 4rd years of the Degree.				
	The students have to be familiar with subject				
	[Calculus I and II] because some of the info		subjects will be	necessary to follow	
	Applied Electrotechnic, without and extra ef	fort			

## Competencies

Code

Learning outcomes Expected results from this subject

Training and Learning Results

(\*)6. Mostrar habilidades sociales para entender a las familias y hacerse entender por ellas

Contents	
Topic	
UNIT I: 3-PHASE CIRCUITS, POWER MEASUREMENTS AND REACTIVE POWER COMPENSATION. This Unit will allow the student to understand how	<ul> <li>Introduction: Generators, loads and 3-phase circuits</li> <li>Balanced 3-phase circuits. Voltages and currents.</li> <li>Conversion of 3-phase sources and loads.</li> <li>Analysis of balanced 3-phase circuits.</li> <li>Powers in balanced 3-phase circuits. Compensation.</li> <li>Analysis of unbalanced 3-phase circuits.</li> </ul>
Initially the unit covers the basic concepts for the analysis of balanced circuits. It continues analyising unbalanced circuits, the different methods to measure the electrical powers and the compensation of the reactive power. UNIT II: TRANSFORMERS	Analogies between electric and magnetic circuits.
	<ul> <li>Introduction to the transformers: constructive aspects.</li> <li>The ideal transformer.</li> </ul>
	<ul> <li>Equivalent circuit of the single-phase transformer real: e.m.f's and voltages.</li> <li>No-load and in short-circuit tests of the transformer.</li> <li>Voltage drops , losses and performance of a transformer.</li> <li>Autotransformers.</li> <li>3-phasetransformers: Constitution, conection diagrams and tests.</li> </ul>
	Instrument transformers.

Methodologies	
	Description
Lecturing	The usual lecture
Problem solving	The professor will guide the first steps of the alumni in order to show them how to analyse diferent problems/sytuations and how to solve them
Collaborative Learning	Once taght how to solve a "generalistic problem" the alumni will heve to create groups to find out the solutions to same proposed problems related with the subject.
	They will be requested to collaborate in order to hand the professor the proper solution at the end
Laboratory practical	Experimental solving of of proposed lab tests, realization of measurements and presentation of results.

Personalized assistance				
Methodologies	Description			
Laboratory practical	The doubts and questions that can arise during the classes or personal assignments of the students will be solved either in situ or during the tuition hours. The tuition personal attention should be required by e-mail. The professor will use his " Virtual Office" to solve any of these questions, if in-person tuition is not needed			
Lecturing	he doubts and questions that can arise during the classes or personal assignments of the students will be solved either in situ or during the tuition hours. The tuition personal attention should be required by e-mail. The professor will use his " Virtual Office" to solve any of these questions, if in- person tuition is not needed			
Problem solving	he doubts and questions that can arise during the classes or personal assignments of the students will be solved either in situ or during the tuition hours. 	Description	Qualification	Training and Learning Results
Lecturing	It will cover 40% of the mark of the second part assesment	20	
Problem solving	It will cover 100% of the mark of the first part assesment	70	
	It will cover 40% of the mark of the second part assesment		
Laboratory practic	alincluded in the second part theory test.	10	
	They will be valued as a 10% of the final mark		

#### Other comments on the Evaluation

Continuous assessment (100%):

At the end of each Part (I & II) the student will perform a test that will be scored from 0 to 10 points. The passing mark is 5. The test will cover theoretical issues and practical exercisesIn each Part the student can reach 50% of the final mark. The passed partial tests are released from the corresponding part in the final exam.

For the students who pass all tests, the final mark will be the average of the marks of the partial tests.

Students who fail any or all partial tests, will have take a final exam whrere she/he will be graded from 0 to 10 points. To pass the subject it is necessary to achieve a minimum grade of 3 points in each part and an avereage mark bigger than 5.

Students approved by partial tests can modify (maybe improve) their mark by presenting to the final exam. The professors will indicate the dates and places of publication of marks and revisions

#### Description

#### === EXCEPTIONAL PLANNING ===

Given the uncertain and unpredictable evolution of the health alert caused by COVID-19, the University of Vigo establishes an extraordinary planning that will be activated when the administrations and the institution itself determine it, considering safety, health and responsibility criteria both in distance and blended learning. These already planned measures guarantee, at the required time, the development of teaching in a more agile and effective way, as it is known in advance (or well in advance) by the students and teachers through the standardized tool.

=== ADAPTATION OF THE METHODOLOGIES ===

- \* Teaching methodologies maintained
- \* Teaching methodologies modified

\* Non-attendance mechanisms for student attention (tutoring)

\* Modifications (if applicable) of the contents

\* Additional bibliography to facilitate self-learning

\* Other modifications

=== ADAPTATION OF THE TESTS === \* Tests already carried out Test XX: [Previous Weight 00%] [Proposed Weight 00%] ...

\* Pending tests that are maintained Test XX: [Previous Weight 00%] [Proposed Weight 00%] ...

\* Tests that are modified [Previous test] => [New test]

\* New tests

\* Additional Information

Mentored work	0	11	11
*The information in the planning tabl	e is for guidance only and does no	ot take into account the het	erogeneity of the students

Methodologies		
	Description	
Lecturing	Presentations given by the lecturer of the main contents of the subject	

Problem solving	Proposal of a set of problems/exercises that students must resolve by themselves. Guidelines, required formulas and common routines will be given in the classroom. Some problem will be resolved at the classroom, by the lecturer or by a student.
Seminars	Additional explanations to solve the main difficulties about the subject contents
Laboratory practical	Activities for application of the theoretical knowledge to particular situations and for the acquisition of basic skills and procedures related to the subject. Students will use the laboratories with the suitable equipment and devices.
Mentored work	Students, individually or in group, elaborate a document or presentation about some important topic related to the subject. Student can be asked to prepare a seminar, a short research, a summary of a document or conference

Methodologies Description			
Mentored work	Personalized attention, the lecturer will guide the preparation of the project. Any difficulty/doubt will be attended. Independently on the teaching modality, this support can be provided electronically (email, videoconference, FAITIC forum) after being formally requested.		
Seminars	Personalized attention, time devoted to help students with any difficulty or doubt. Independently on the teaching modality, this support can be provided electronically (email, videoconference, FAITIC forum) after being formally requested.		

Assessment			
	Description	Qualification 7	Fraining and Learning Results
Lecturing	The assessment will be completed with a written exam of short questions, tests or exercises. The purpose is to assess the level of knowledge achieved along the course.	60	
Laboratory practical	The laboratory activities will be assessed through the students attendance and participation, preparation of reports or visits to local companies.	25	
Mentored work	It will be assessed by the handed reports and/or the exhibition in the classroom of the prepared project.	15	

#### Other comments on the Evaluation

The continuous assessment will be followed during the teaching period of the subject according to the criteria established in the previous section. In the final exam, a minimum mark of 4 out of 10 is required in the own written exam to pass the subject. The date of the exam will be fixed by the school and can be checked at http://eei.uvigo.es. In case this minimum mark was not achieved, the whole mark will be that corresponding to the continuous assessment, this means that the mark of the final exam will not be added to the whole mark.

Students have the right to renounce to the continuous assessment system. This option must be asked officially. In this situation, the final exam will include the totality of the contents of the subject, and its qualification is 100%.

In the SECOND ATTEMPT (exam in July): The qualification obtained from the continuous assessment will be kept, unless the student request to be cancelled in due course. In this situation, the totality of the contents of the subject (those given in the classroom and in the laboratory) will be included in this final exam and the student could achieved 100% of the qualification. The date of the exam will be fixed by the school and can be checked at http://eei.uvigo.es.

EXTRAORDINARY CALL: the exam (questions, tests and/or exercises) will include the totality fo the contents and the qualification will be 100%.

Ethical commitment: student is expected to show an ethical behavior. In the case a non ethical behavior is detected (copy, plagiarism, use of forbidden electronic devices, or others), the student will failed with a qualification of 0%.

#### Contingency plan

#### Description

=== EXCEPTIONAL PLANNING ===

Given the uncertain and unpredictable evolution of the health alert caused by COVID-19, the University of Vigo establishes an extraordinary planning that will be activated when the administrations and the institution itself determine it, considering safety, health and responsibility criteria both in distance and blended learning. These already planned measures guarantee, at the required time, the development of teaching in a more agile and effective way, as it is known in advance (or well in advance) by the students and teachers through the standardized tool.

=== ADAPTATION OF THE METHODOLOGIES ===

\* Methodologies

They will be adapted to the telematic tools available for the lectures. Modifications in the provided information given through FaiTIC, email or Campus Remoto will be eventually done as well.

#### \* Non-attendance mechanisms for student attention (tutoring)

The tutoring could be given in person (provided that the health measures are guaranteed) or telematic (e-mail, Campus Remoto or FaiTIC forums) under the modality of previous agreement. A methodological adaptation will be made to students at risk, providing them with additional specific information, if it is proven that they cannot access the contents in a conventional way.

#### === ADAPTATION OF THE TESTS ===

Those tests that are already being carried out telematically will be maintained and, as far as possible, the on-site tests will be maintained, adapting them to the current health regulations. The tests will be carried out in person, unless the Rector's Resolution indicates that they should be carried out in a non-presential manner, using the several tools available to the teaching staff. Those tests that cannot be carried out by telematic means will be replaced by others (guided autonomous work, etc.)

\* Modification in the continuous assessment.

	2.13. Magnetic dipole
II.3. ELECTROMAGNETIC INDUCTION AND	3.1. Electromagnetism in moving media
QUASISTATIC FIELDS	3.2. Galilean transformation of electric and magnetic fields
	3.3. Electromotive force around a circuit
	3.4. Faraday's law of electromagnetic induction
	3.5. Definition of quasistatic fields
	3.6. Self-inductance and mutual inductance
	3.7. Magnetic energy
II.4. ELECTROMAGNETIC WAVES	4.1. Wave equations for fields E and H
	<ul><li>4.2. E.M. monochromatic plane waves in lossless media</li><li>4.3. E.M. monochromatic plane waves in lossy media</li></ul>
	4.4. Incidence of a plane wave on an interface between two perfect
	dielectrics
	4.5. Incidence of a plane wave on an interface between a perfect dielectric
	and a conductor
III.1 LABS: STRUCTURED ACTIVITY SESSIONS	1.1 Structured activity sessions:
	- Experimental data processing (approximate quantities, measurement of
	physical magnitudes, error estimation)
	- Adequate operation with basic measurement instruments (flex-meter,
	micrometer, multimeter (analog and digital), oscilloscope)
	- Laboratory experiments with mechanical or electromagnetic waves
	(emission and reception of ultrasonic waves, microwaves or light waves, standing waves along one direction, Michelson interferometer)

- A practical problem, formulated with basic initial data, will be assigned to each working team. Then, under the teacher's supervision, each team must analyze the problem, select a possible solution and carry it out in the lab

- For the open lab problems, diversity of topics and experimental techniques are considered within the field of wave and electromagnetic phenomena, in particular, electric current conduction and electromagnetic induction in quasi-static regime

- As a reference, some open lab problems that can be proposed are: measuring the electric field on a weakly conducting sheet, numerical solution of the Laplace equation, measuring the self-inductance of a coil or a solenoid, measuring the mutual inductance of two coils or two solenoids - As an option, the open lab session may be replaced by a welldocumented piece of work reporting some topic/technique/process/device related to science or technology where wave or electromagnetic phenomena play an essential role. The report must include a model of the problem, clearly identifying the relevant quantities and physical laws

Methodologies	
	Description
Lecturing	The main topics of the subject are introduced by the teacher using projected presentations and the blackboard, emphasizing the theoretical basis and fundamentals and stressing the critical or key points. Eventually, demonstrative experiments or audiovisual material could be employed
Problem solving	Academic problems related to the topics of the subject are formulated and worked out at the blackboard by the teacher or the students. By practicing standard schemes, formulas or algorithms and by analyzing the results the student must develop adequate skills to be able to obtain the correct solution to the problem on his/her own at the end of the course
Laboratory practical	Activities for applying the knowledge to particular situations and for developing basic and procedural skills related to the subject. These activities will be held in specific rooms with specialized equipment (hardware and computer labs)

Report of practices, practicum and external practices	Each team should write a report on the activities carried out. The report must include the developed tasks and procedures, the obtained results or taken observations, as well as a detailed description of the data processing and analysis	10	B10	C2	D10

#### Other comments on the Evaluation

#### **1. CONTINUOUS ASSESSMENT**

#### **CONTINUOUS ASSESSMENT TESTS (40%)**

- Mark A0 (20%) will be obtained from essay questions exams on topics of Parts I and II

- Mark L0 (20%) will be obtained from a problem solving exam on topics of Part III.1 (10%) and from the open lab report (or the topic report) corresponding to Part III.2 (10%). Only students that have regularly attended the lab sessions can obtain the mark L0

#### FINAL EXAM (60%)

- It is held in the December-January call
- Mark T1 (30%) will be obtained from an essay questions exam on topics of Parts I and II
- Mark P1 (30%) will be obtained from a problem solving exam on topics of Parts I and II

#### **GLOBAL MARK**

- The global mark G1 is obtained as

$$G1 = T1 + P1 + L0 + A0$$

- To pass the course, a student must obtain a global mark G1 equal to or higher than 5

#### 2. END-TERM ASSESSMENT

#### EXAM THAT REPLACES CONTINUOUS ASSESSMENT TESTS (40%)

- It is held on the same date as the final exam in the December-January call
- Mark A1 (20%) will be obtained from essay questions exams on topics of Parts I and II
- Mark L1 (20%) will be obtained from a problem solving exam on topics of Part III.1

#### **GLOBAL MARK**

- In this case the global mark G1 is obtained as

$$G1 = T1 + P1 + L1 + A1$$

- To pass the course, a student must obtain a global mark G1 equal to or higher than 5

- A student that had previously obtained marks L0 or A0 (or both) would choose between:

a) answering the exam(s) corresponding to mark L1 and/or mark A1, in such a way that the new mark L1 replaces L0 and/or the new mark A1 replaces A0

b) holding mark L0 and/or mark A0 instead of answering the exam(s) corresponding to mark L1 and/or mark A1, respectively

#### 3. ASSESSMENT IN THE SECOND CALL (JUNE-JULY)

#### FINAL EXAM (60%)

- It is held in the June-July call
- Mark T2 (30%) will be obtained from an essay questions exam on topics of Parts I and II
- Mark P2 (30%) will be obtained from a problem solving exam on topics of Parts I and II

#### **EXAM THAT REPLACES CONTINUOUS ASSESSMENT TESTS (40%)**

- It is held on the same date as the final exam in the June-July call
- Mark A2 (20%) will be obtained from essay questions exams on topics of Parts I and II
- Mark L2 (20%) will be obtained from a problem solving exam on topics of Part III.1

#### **GLOBAL MARK**

- In this case the global mark G2 is obtained as

$$G2 = T2 + P2 + L2 + A2$$

- To pass the course, a student must obtain a global mark G2 equal to or higher than 5

- A student that had previously obtained marks L0, L1, A0 or A1 would choose between:

a) answering the exam(s) corresponding to mark L2 and/or mark A2, in such a way that the new mark L2 and/or the new mark A2 will replace the marks of the same type (L0 or L1 and/or A0 or A1, respectively)

b) holding the most recent marks of each type (L0 or L1 and/or A0 or A1) instead of answering the exam(s) corresponding to mark L2 and/or mark A2, respectively

#### **4. NOTATION FOR MARKS**

- L = the latest mark among L0, L1 and L2

- A = the latest mark among A0, A1 and A2

- T = T1 in December-January call (1st edition) or T2 in June-July call (2nd edition)

- P = P1 in December-January call (1st edition) or P2 in June-July call (2nd edition)

- G = G1 in December-January call (1st edition) or G2 in June-July call (2nd edition)

- In any of the calls the global mark G is obtained as

$$G = T + P + L + A$$

- To pass the course, a student must obtain a global mark G equal to or higher than 5

#### **5. SUPPLEMENTARY ASSESSMENT RULES**

- Presentation of DNI or any other identification document is compulsory during tests and exams

- Resources and material that can be used in the tests and final exams:

a) In problem solving exams on topics of parts I and II (corresponding to marks P1 and P2) it is allowed to employ notes about theory adequately bound (this includes both the Department lecture notes on the subject and the handwritten notes of the student, <u>exclusively about theory</u>), one textbook and one mathematics handbook (Bronshtein or similar). It is forbidden the user of any workbooks or collections of worked out problems

b) In any other case, the use of any additional resources is forbidden

c) Students should not possess or use any electronic device during the tests and exams, unless specifically authorised to do so. The mere fact that a student carries an unauthorised electronic device into the examination room will result in failing the subject in the present academic year and the global mark will be "suspenso (0.0)"

- The tests and exams will be jointly defined and assessed by the teaching team of the subject

- The global mark for students not attending the final exam will be "non presentado"

- The dates for the final exams at each call will be assigned by the board of directors of the School of Industrial Engineering (E.E.I.)

- The exams corresponding to the end-of-degree call, as well as any exam held on date and time other than the dates and times stated by the E.E.I. for official exams, could have a different format than the one described above. Nevertheless, each mark (L, A, T and P) will hold its value to calculate the global mark G

- The date and hours for revision of marks and tests and exams results will be announced in advance. Revision out of this date and hours will be possible only if a reasonable reason for non-attendance is documented

#### **6. ETHICAL COMMITMENT**

Every student is expected to follow an appropriate ethical behaviour. In the case that unethical conduct is detected (copy, plagiarism, utilisation of unauthorised electronic devices, or others), it will be considered that the student does not fulfil the necessary requirements to pass the subject. In this case, the global mark in the present academic year will be "suspenso (0.0)"

#### Recommendations

#### Subjects that it is recommended to have taken before

Physics: Physics 1/V12G360V01102 Physics: Physics 2/V12G360V01202 Mathematics: Algebra and statistics/V12G360V01103 Mathematics: Calculus 1/V12G360V01104 Mathematics: Calculus 2 and differential equations/V12G360V01204

#### **Other comments**

Requirements: To register in this subject, it is mandatory to have been registered or to be registered in all the subjects corresponding to the first and second years of the curriculum of the Degree in Industrial Technologies Engineering

In particular, it is highly recommended reviewing the topics in Physics and Mathematics included within the subjects that should have been passed previously

In the event of discrepancy, the Spanish version of this syllabus prevails

#### **Contingency plan**

#### Description

=== EXCEPTIONAL PLANNING ===

Given the uncertain and unpredictable evolution of the health alert caused by COVID-19, the University of Vigo establishes an extraordinary planning that will be activated when the administrations and the institution itself determine it, considering safety, health and responsibility criteria both in distance and blended learning. These already planned measures guarantee, at the required time, the development of teaching in a more agile and effective way, as it is known in advance (or well in advance) by the students and teachers through the standardized tool.

=== ADAPTATION OF THE METHODOLOGIES ===

\* Teaching methodologies maintained

\* Teaching methodologies modified

All the methodologies (lecturing, problem solving and laboratory practical): in the blended learning regime face-to-face classroom activities will be combined with on-line lecturing through the virtual campus ([Campus Remoto]]), using FAITIC platform as an additional support. In the distance learning regime only online lecturing will take place through virtual

campus ([Campus Remoto]), using FAITIC platform as an additional support as well. To guarantee the access of the students to the materials and resources of the course other methodologies and media could be implemented if needed.

In particular, for the laboratory practical in the blended learning regime the operation of experimental devices by the students and the associated data acquisition activities could suffer major restrictions (due to the reduced effective capacity of the laboratory classroom, the mandatory use of personal protective equipment, the implementation of special hygiene measures and other factors). For these reasons, these activities will be mostly replaced by demonstrations developed by the lecturer in a session face-to-face with part of the students in a laboratory group. These demonstrations could be followed online by the rest of the students of the same group. Data processing and analysis are greatly independent of the operation of experimental devices and can be developed outside of the laboratory classroom (in another classroom, at home, etc..). In the distance learning regime, the laboratory practical will be developed entirely online and the operation of experimental devices will be completely replaced by demonstrations developed by the lecturer that could be followed online by the students. These demonstration could be complemented by other specific audiovisual materials.

\* Non-attendance mechanisms for student attention (tutoring)

Office hours and tutoring could be developed both face-to-face (provided that the health safety can be guaranteed using personal protective equipment) or online, by using asynchronous media (email, forum, etc..) or by making an appointment (videoconference).

- \* Modifications (if applicable) of the contents
- \* Additional bibliography to facilitate self-learning
- \* Other modifications

=== ADAPTATION OF THE TESTS === \* Tests already carried out Test XX: [Previous Weight 00%] [Proposed Weight 00%] ...

\* Pending tests that are maintained Test XX: [Previous Weight 00%] [Proposed Weight 00%] ...

\* Tests that are modified

[Previous test] => [New test]

The weights of the continuous assessment classroom (A-20%) and laboratory (L-20%) tests and the theory (T-30%) and problems (P-30%) final exams are kept unchanged. However, more flexibility could be introduced in the type of questions that can be employed in each part as detailed below.

Continuous assessment test, part A, weight 20%. Type of assessment: essay questions.

=>

Continuous assessment test, part A, weight 20%. Type of assessment: objective questions, problem and/or exercise solving and essay questions.

Continuous assessment test, part L, weight 20%. Type of assessment: problem and/or exercise solving (10%) and report (10%).

=>

Continuous assessment test, part L, weight 20%. Type of assessment: problem and/or exercise solving and objective questions (10%) and report (10%).

Final exam, part P, weight 30%. Type of assessment: problem and/or exercise solving.

=>

Final exam, part P, weight 30%. Type of assessment: problem and/or exercise solving and objective questions.

Final exam, part T, weight 30%. Type of assessment: essay questions.

=>

Final exam, part T, weight 30%. Type of assessment: objective questions and essay questions.

\* New tests

Methodologies	Description
Problem solving	Personalized attention will be given to the students during class (throughout the possible questions that could arise) and during the specific timetable of the teacher for tutorships. Updated information of the tutorships timetables will be given to the students
Lecturing	Personalized attention will be given to the students during class (throughout the possible questions that could arise) and during the specific timetable of the teacher for tutorships. Updated information of the tutorships timetables will be given to the students
Laboratory practica	I Personalized attention will be given to the students during class (throughout the possible questions that could arise) and during the specific timetable of the teacher for tutorships. Updated information of the tutorships timetables will be given to the students

Assessment

Qualification Training and Learning Results

Essay questions exam	Proof written that it will be able to consist of: - theoretical questions - practical questions - Resolution of exercises/problems - Short covering of a topic	80	В3	C8	D2 D9 D10
Problem and/or exercise solving	Resolution of exercises proposed, including: -Short reports/exercises proposed	20	B3	C8	D2 D9 D10
(*)	-	-			

#### Other comments on the Evaluation

Continuous evaluation: represents 20% of the grade, which consists of solving some proposed exercises. Except official renounce of the student, the course is followed under continuous assessment mode.

Continuous assessment grading is not saved year after year

Final exam (first call): 80% of the total mark, which consists of theoretical question, practical questions, resolution of exercises/problems or short covering of a topic

July final exam (second call): represents 100% of the grade (continous evaluation is not considered)

Ethical Commitment: In case of noticing a non ethical behaviour (copy, plagiarism, utilisation of unauthorised electronic devices, and others) it will be considered that the student does not gather the necessaryrequirements to pass the course. In this case, the global qualification iof the present academic course will be failed (0.0)

#### Contingency plan

#### Description

#### EXCEPTIONAL PLANNING

Given the uncertain and unpredictable evolution of the health alert caused by COVID-19, the University of Vigo establishesan extraordinary planning that will be activated when the administrations and the institution itself determine it,

consideringsafety, health and responsibility criteria both in distance and blended learning. These already planned measures guarantee, at the required time, the development of teaching in a more agile and effective way, as it is known in advance (or well inadvance) by the students and teachers through the standardized tool.

ADAPTATION OF THE METHODOLOGIES

Teaching methodologies maintained: Lecturing and tutoring. In any case, if it is needed, they will be substituted by distance learning, using CAMPUS REMOTO or any other available platform

Teaching methodologies modified: Laboratory. This will be substituted by explanatory videos or additional teaching material to explain the different topics

Non-attendance mechanisms for student attention (tutoring): Telematic technology will be used, such as CAMPUS REMOTO or any other available platform, to get in contact with the students

Modifications (if applicable) of the contents: None

Additional bibliography to facilitate self-learning: None

Other modifications: Assessment criteria does not change.

#### ADAPTATION OF THE TESTS

If it is needed, final exam will be substituted by 2 or 3 continuous evaluation tests. These tests can comprise test questions (true or false or several choices) or exercise to solve through Faitic or Campus Remoto in a limited period of time

Metodoloxía docente			
	Description		
Lección maxistral	Exposición da teoría.		
	Translación de problemas técnicos a modelos matemáticos.		
Prácticas con apoio das TIC	Técnicas de cálculo e programación, presentación e interpretación de solucións.		

### Atención personalizada

Methodologies	Description
Lección maxistral	O profesor atenderá as dúbidas e preguntas do alumnado.
Prácticas con apoio das TIC	O profesor atenderá as dúbidas e preguntas do alumnado.

Avaliación			
	Description	Qualification	Training and Learning Results
Exame de preguntas de desenvolvemento	Realizarase un exame final de resolución de problemas na aula informática onde se poderán utilizar os programas preparados polo alumno, sobre os contidos de toda a materia.	60	
Resolución de problemas e/ou exercicios	Avaliación continua: Asistencia as clases teóricas e practicas. Presentación dunha worksheet en Sage cos traballos propostos ó alumno.	40	

#### Other comments on the Evaluation

Para os alumnos que renuncien á avaliación continua o examen final suporá o 100% da nota.

A avaliación dos alumnos en segunda convocatoria consistirá nun exame sobre os contidos da totalidade da materia, que suporá o 100% da nota.

#### COMPROMISO ÉTICO:

"Esperase que o alumno presente un comportamento ético adecuado. En caso de detectar un comportamiento non ético (copia, plaxio, utilización de aparellos electrónicos non autorizados, e outros) se considerará que o alumno non reúne os requisitos necesarios para superar a materia. Neste caso a calificación global no presente curso académico será de suspenso (0.0)."

#### Requisitos:

Para matricularse nesta materia é necesario superar ou ben estar matriculado de todas as materias dos cursos inferiores ao curso no que está situada esta materia.

En caso de discrepancias, prevalecerá a versión en castelán desta guía.

#### Plan de Continxencias

Description

#### === MEDIDAS EXCEPCIONAIS PLANIFICADAS ===

Ante a incerta e imprevisible evolución da alerta sanitaria provocada pola COVID- 19, a Universidade establece una planificación extraordinaria que se activará no momento en que as administracións e a propia institución o determinen atendendo a criterios de seguridade, saúde e responsabilidade, e garantindo a docencia nun escenario non presencial ou non totalmente presencial. Estas medidas xa planificadas garanten, no momento que sexa preceptivo, o desenvolvemento da docencia dun xeito mais áxil e eficaz ao ser coñecido de antemán (ou cunha ampla antelación) polo alumnado e o profesorado a través da ferramenta normalizada e institucionalizada das guías docentes DOCNET.

=== ADAPTACIÓN DAS METODOLOXÍAS ===

Se a situación sanitaria o requiere,

- A actividade docente realizaráse a través de Campus Remoto, utilizando tamén a plataforma de teledocencia FAITIC como reforzo, todo elo sen perxuicio de poder utilizar medidas complementarias que garanticen a accesibilidade dos

Methodologies	
	Description
Lecturing	Lectures about the topics of the subject
Problem solving	Discussion of exercises
Laboratory practical	Practical sessions including specific material and software tools.

Personalized assistance		
Methodologies	escription	
Lecturing	Group or individual tutorial sessions will be held during office hours to strengthen the acquired knowledge and to guide and assess the proposed works/papers	
Problem solving Group or individual tutorials will be held during office hours to strengthen the acqu and to guide and assess the proposed works/papers.		
Laboratory practical	Group or individual tutorials will be held during office hours to strengthen the acquired knowledge and to guide and assess the proposed works/papers.	

Assessment					
	Description	Qualification		aining ming F	and Results
Laboratory practical	Attendance and participation as well as practices reports, papers, and tests will be rated. However, to be evaluated, students must attend a minimum of 7 practice sessions; otherwise, students won to be evaluated and will get 0 points. Learning outcomes: all will be graded	20		C13 C26	D2 D9 D16 D20
Objective questions exam	Final and mid-term tests will be focused on the contents taught at classes and laboratory sessions. Learning outcomes: all will be graded	80	B3 B4 B5 B6 B11	C13 C26	D2 D9 D16

#### Other comments on the Evaluation

Students must achieve 5 points (\*) or higher grade to pass the subject, following these rules:

- Laboratory Practical.
  - Students are required to attend and utilized the laboratory/Computer room. Practices reports, papers, and tests for each practice session as well as proposed works/papers from tutorials will be evaluated and graded with a maximum of 2 points. This grade will be kept for the second term in the student[]s evaluation records (July). To be evaluated, students must attend a minimum of 7 practice sessions; otherwise, students won[]t be evaluated and will get 0 points.
  - For those students who have been officially granted the right to waive their continued evaluation, there will be a mandatory final test where they will be able to get a maximum grade of 2 points. However, an advanced request must be made to the professor to prepare the necessary materials for this test.

• Objective question exam. It will be graded in a test that have a minimum grade of 8 points.

(\*) Grades are calculated using a system of numerical qualification from 0 to 10 points conforming to the Spanish current legislation (RD 1125/2003, 5 September; BOE 18 September).Ethical commitment: An adequate ethical behaviour of the student is expected at all times. In case an unethical behaviour is detected (copying, plagiarism, unauthorized use of electronic devices, and others); the student will be considered unfit to meet the necessary requirements to pass the subject. In this case, the overall qualification in the current academic year will be a Fail grade (0.0).

The use of any electronic devices during tests is completely forbidden unless is specified and authorized. The fact of introducing unauthorized electronic devices in the examination room will be considered reason enough to fail the subject in the current academic year and the overall qualification will be a Fail grade (0.0).

#### Contingency plan

#### Description

=== EXCEPTIONAL PLANNING ===

Given the uncertain and unpredictable evolution of the health alert caused by COVID-19, the University of Vigo establishes an extraordinary planning that will be activated when the administrations and the institution itself determine it, considering safety, health and responsibility criteria both in distance and blended learning. These already planned measures guarantee, at the required time, the development of teaching in a more agile and effective way, as it is known in advance (or well in advance) by the students and teachers through the standardized tool.

In the event that attendance to classes become legally entirely or partially limited, the measures set on place will be:

1. To guarantee the necessary means, namely personal computer or internet access, to every enrolled student so they can follow the distance learning classes, appropriately. Therefore, to apply the appropriate solutions, any student who does not have any of these means should inform the course coordinator.

2. To inform students of the different measures adopted, the department will use the platform, Faitic.

3. On top of that, in the case of cancelation of face-to-face classes, the teaching guide will show the next modifications:

- A. Competences. They will not be modified.
- B. Learning outcomes. They will not be modified.
- C. Contents. They will not be modified.
- D. Planning. It will not be modified.

E. Methodology. It will be modified:

Lecturing and Problem solving. They will require the employment of electronic means (virtual classroom of the Remote Campus or others).

Laboratory Practices. The department will provide every student access to CAD and FEM software, so that they can carry out the practices remotely instead of from the Mechanical Engineering laboratory. The professor will supervise these practices using electronic means (virtual classroom of the Remote Campus or others).

F. Tutoring Lessons. They will be carried out by previously arranged electronic means (e-mail, faitic forums or virtual classroom at campus remote, []).

G. Assessment. Assessment methodologies/test will not be modified: Laboratory practical and Essay questions exam. Description, qualification, and competences, they will not be modified. All exams will use electronic means (virtual classroom of the Remote Campus or others); the department will publish in advance the specific rules for each test in the platform, Faitic. According to attendance at the virtual practice sessions, the professor will compute and validate each practice attendance on virtual classroom of the Remote Campus.

Partial tests for the evaluation of specific contests of the subject can be proposed. Once again, the professor will publish in advance the rules concerning each test in the platform, Faitic.

H. Bibliography. Besides the bibliographical references found in this guide, the documentation provided at Faitic, and the problem bulletins and previous exams, the professor might facilitate additional notes, videos, web-references, and others, so that students can appropriately follow the course during the non-face-to-face classes.

This guide can be modified following Rectoral rules.

Topic

Fundamentals of elasticity	Introduction to the theory of elasticity
-	Stress analysis of elastic solids
	Strain
	Stress-strain relationships
	Two-dimensional elasticity
Criteria of failure	Saint-Venant∏s failure criterion
	Tresca∏s failure criterion
	Von-Mises failure criterion
	Safety coefficient
Bending	Non uniform bending:
	Shear stresses. Zhuravski expression
	Principal stresses. Stress trajectories
	Bending and axial load:
	Normal stresses. Neutral axis
	Eccentric axial loads
	Kern of the cross-section
	Beams of different materials
Bending. Statically indeterminate beams	General method
	Settlements in fixed supports
	Continuous beams
	Simplifications in symmetric and antisymmetric beams
Torsion	Definition
	Coulomb <sub>D</sub> s fundamental theory
	Static torque diagrams
	Stress and angle of twist
	Statically indeterminate problems
Combined loads	Definition
combined loads	Bending and torsion loaded circular shafts
	Shear center
	Stress and strain calculation in plane-spatial structures
Strain energy and energy methods	Strain energy: Axial load/shearing loads/bending/torsion/general
Strain energy and energy methods	expression.
	Clapeyron's theorem
	Indirect and direct work
	Maxwell Betti Reciprocal Theorem. Applications.
	Castigliano s theorem. Mohr's integrals. Applications.
	Principle of virtual works.
Trusses	Definition and general comments
110505	Degree of indeterminacy
	Analytical method of force calculation
	Pinned joint displacement determination
	External indeterminacy and internal indeterminacy
Structures with rigid joint connections	Definition
Structures with right joint connections	Joint stiffness factor and distribution factor
	Degree of indeterminacy. Analysis by the stiffness method.
Moving loads	Influence lines. Definition and general properties.

Methodologies	
	Description
Introductory activities	Introduction to the subject: Course aims, expected learning outcomes, course syllabus, teaching methods, assessments and grading policy.

Previous studies	Student previous activities to lectures.
	The students will receive detailed instructions to complete and send certain exercises before lectures/laboratory sessions.
	The purpose of this assessment is to optimize the session outcome.
_	The delivery of these exercises will modify the obtained qualification of the continuous assessment (laboratory practices and conceptual tests) as explained in the section of "Other comments and second call" in this guide.
Lecturing	The contents of the subject will be presented in a organized way. Special emphasis will be put on the fundamentals of the subject and on the most troublesome points.
	To improve the comprehension, the contents of the next lectures will be announced on Tema platform on a weekly basis.
Problem solving	Each week will devote a time to the resolution by part of the student of exercises or problems proposed, related with the content studied in each moment.
Laboratory practical	Application of theory concepts to laboratory collaborative works.
Autonomous problem solving	The students will be supplied with exercises and problems to solve, the solutions will be provided for level self-evaluation.

Personalized assistance		
Methodologies	Description	
Autonomous problem solving	The lecturers are at disposal of the students during office hours to solve any question related to the subject contents. The students will be able to verify if the completed assignments are correct and to identify the mistakes of miscalculations. The detailed schedule will be provided to the students at the beginning of the course through the TEMA platform. Any modification will be previously announced.	

Assessment				
	Description	Qualification	Training Learn Resu	ing
Previous studies	The delivery of these exercises will modify the obtained qualification of the continuous assessment (laboratory practices and conceptual tests) as explained in the section of "Other comments and second call" in this guide. It shall be deemed completed when a previous activity fully answer all questions.	0		D5 D9 D10 D17
Laboratory practical	Attendance and active participation in the complete laboratory lessons and practice reports will be assessed. They will be graded from 0 to 10, provided that the student gets a minimum mark in the written examination (minimum mark: 4.5/10). The qualification will be modified by the coefficient introduced in the "Other comments and second call" section in this guide.	5	B4 C14	D2 D5 D9 D10 D17
Problem and/or exercise solving	Exam for the assessment of the module learning outcomes. The exam comprises of brief problems and/or theoretical questions. The duration and precise grading will be communicated at the beginning of the exam.	80	B3 C14 B4	D2 D9
Laboratory practice	Short exercises and conceptual tests will be taken during the course (within lecture or laboratory hours; grading from 0 to 10). The mark will be added to the exam mark, provided that the student gets a minimum mark in the written examination (minimum mark: 4.0/10). The qualification will be modified by the coefficient introduced in the "Other comments and second call" section in this guide.	15	Β3	D9

#### Other comments on the Evaluation

In this module the minimum required mark to pass is 5 out of 10.

The written examination of students not able to attend laboratory sessions will be graded 100% of the module mark, provided the student resigns from continuous assessment (and gets the required school approval) within the period established for that purpose. This examination will assess the subject overall competencies.

The qualification obtained in the laboratory practices in any of the two previous years (5% of the qualification) will be

preserved in the current year, provided the student requests that within an established period in the beginning of the course.

The qualification obtained in the conceptual tests in any of the two previous years (15% of the qualification) will be preserved in the current year, provided the student requests that within an established period in the beginning of the course. The rating obtained only remain within the language chosen at the time in which he studied the subject.

Comments about continuous assessment:

The handing of previous exercises (within the established period for each exercise) will modify the qualification of laboratory practices and follow-up conceptual tests as following explained:

Qualification of laboratory practices =  $K_{\Box}$ (overall practice grade)/(nr of laboratory sessions)

Qualification of conceptual tests = K [](addition of tests[] grades)/(nr of tests)

K = (nr of previous exercises delivered)/(total nr of previous exercises)

Additional comments:

The absence from a laboratory session, even justified, does not lead to the repetition of the session.

The absence from a test, even justified, does not lead to the repetition of the test.

The date and place of of examinations of all calls shall be determined by the center before the start of course and will make them public .

Ethical commitment: it is expected an adequate ethical behaviour of the student. In case of detecting unethical behaviour (copying, plagiarism, unauthorized use of electronic devices, etc.) shall be deemed that the student does not meet the requirements for passing the subject. In this case, the overall rating in the current academic year will be Fail (0.0).

The use of any electronic device for the assessment tests is not allowed unless explicitly authorized. The fact of introducing unauthorized electronic device in the examination room will be considered reason for not passing the subject in the current academic year and will hold overall rating (0.0).

Group responsible lecturer: Groups with teaching in Spanish: Marcos García González and Adrián Pérez Riveiro.

Group with teaching in English: Rafael Comesaña and Antonio Riveiro

Reading list for the group in English:

Recommended:

- Hibbeler R.C., Mechanics of Materials, SI Edition, Prentice Hall. 9th. edition

- José Antonio González Taboada , Tensiones y deformaciones en materiales elásticos, 2a Edición, Tórculo.

- José Antonio González Taboada , Fundamentos y problemas de tensiones y deformaciones en materiales elásticos, 1ª Edición, Tórculo.

Complementary:

- Timoshenko, Goodier, Theory of elasticity, 3rd ed., (International student ed.), McGraw-Hill

- Manuel Vázquez , Resistencia de Materiales.

#### **Other comments**

To register for this module the student must have passed or be registered for all the modules of the previous years.

The original teaching guide is written in Spanish. In case of discrepancies, shall prevail Spanish version of this guide.

#### Contingency plan

#### Description

#### === EXCEPTIONAL MEASURES PLANNED ===

Given the uncertain and unpredictable evolution of the health alert caused by COVID-19, the University of Vigo establishes extraordinary planning that will be activated at the time that the administrations and the institution itself determine it based on criteria of safety, health and responsibility, and guaranteeing teaching in a non-classroom or partially classroom setting. These already planned measures guarantee, at the required time, the development of teaching in a more agile and effective way by being known in advance (or well in advance) by students and teachers through the standardized tool and institutionalized teaching guides.

=== ADAPTATION OF THE METHODOLOGIES ===

An attempt will be made to ensure that the degree of presentiality in teaching guarantees the safety and health of all parties involved. In any case, the guidelines will be followed in instructions indicated by the management of the center. In the event that there is a situation in which the teaching activities cannot be attended, neither the content nor the learning results contemplated in the subject will be affected. To this end, the following adaptations will be made.

Theory sessions:

In the event that they cannot be attended, remote classrooms, video recordings of classes, or any other means enabled by the university will be used for delivery. The contents taught will be the same.

#### Laboratory sessions:

The carrying out of experimental practices will be replaced by non-contact activities to solve similar problems that may require the use of specific calculation / simulation software.

Tutorials:

For the situation of non-attendance, email and, if necessary, videoconference will be used.

Evaluation:

In the event that the tests cannot be carried out in person, they will be carried out by telematic means. The number of assessment tests will not change, nor will the relative weight of each one of them in the course grade.

#### Other comments on the Evaluation

The evaluation consists of:

A.-) Multiplechoice exam: It's mandatory. The students must have a mark > 4 (0 to 10) tobe able to make averarage with part B. Value 50%

PracticalPart, The student have to choose between \*B1 or \*B2

B1.-)Project. Value 50%

B2.-)Essaytype questions: problems and cases. Value 50%.

The finalmark is the average mark A +B, being B = B1 or B2

Ethical commitment: The student is expected to exhibit appropriate ethical behavior. In the case ofdetecting non-ethical behaviour (copy, plagiarism, utilisation of unauthorised electronic evices, and others), it will be considered that the student does not gather thenecessary requirements to pass the subject. In this case the global qualification in the present academic course will be fail (0.0).

Othercomments Requirements: To enrol in this subject is necessary to have passed orbe enrolled in all the matters of the previous courses.

ethical Commitment: it expects that the present student a suitable ethical behaviour. In the case to detect a no ethical behaviour (copy, plagiarism, utilisation of unauthorised electronic devices, and others) will consider that the student does not gather the necessary requirements to surpass the matter. In this case the global qualification in the present academic course will be of suspense (0.0).

	evaluation, depending on the lecturer. (5/40). Student will be properly informed if this option is activated.	
Lecturing	The assessment method will be a test, to be done individually without the use of any information source. There will be one unique test for the whole subject, and it will cover not only the theoretical lessons but the practical lab tests. A minimum mark of 40% will be required in this part Part of this qualification percentage could be obtained with some continuous evaluation in the lab lessons, depending on the lecturer. (10/60). Student will be	60

#### Other comments on the Evaluation

To pass the subject a minimum of 5/10 will be required (result of the sum of the 2 parts)

properly informed if this option is activated.

If the student final mark is bigger than 5, but the minimum in each part is not reached, the overall given mark will be 4.0 (FAILED)

Commitment: An student ethical behaviour is expected. If a non-ethical behaviour is detected (copying, cheating in any way, using unlicensed electronic devices, and others), it will be considered that the student does not gather the necessary requirements to pass the subject. In case of some unethical behaviour the mark will be 0.0 (FAILED) The COVID19 University policies can modify the final exam type, if we have to move to a "virtual exam". Any change will be announced properly so the students can adapt their learning processes to the new situation

#### Other comments on the Evaluation

The participation of the student in any of the evaluation systems of the subject will imply that the student effectively take the subject and its qualification.

To pass the subject, it is necessary that the student obtains a minimum of 5 points out of 10 in each of the proposed evaluation systems. In the case of students who do not attain the minimum in all evaluation systems, they will fail to achieve the pass mark, with a numerical value obtained by following the percentages of the evaluation systems described above, or equal to that obtained in the non passed part.

In July, the previous marks of the evaluation systems will be are kept if a minimum of 5 points out of 10 is achieved; therefore, the students will just have to take an essay or questions exam (theoretical-practical exam).

For students who are allowed by the School to skip the continuous assessment procedure: The qualification of these students will be formed by the mark of the essay & questions exam (90%) and the mark of the practices (10%).

Ethical commitment: The student is expected to present adequate ethical behaviour. In the event that unethical behaviour is detected (copying, plagiarism, unauthorized use of electronic devices, etc.), it will be considered that the student does not meet the necessary requirements to pass the subject. In that case, the overall rating in the current academic year will be [fail (0.0)]. The use of any electronic device for the assessment exams is not allowed unless explicitly authorised. The fact of introducing unauthorised electronic devices in the examination room will be considered as a reason for not to pass the

#### Contingency plan

#### Description

=== EXCEPTIONAL MEASURES SCHEDULED ===

In front of the uncertain and unpredictable evolution of the sanitary alert caused by the \*COVID-19, the University of Vigo establishes an extraordinary planning that will be activated in the moment that the administrations and the own institution determine it attending to criteria of security, health and responsibility, and guaranteeing the teaching in blended or distance learning mode. These already scheduled measures guarantee, in the moment that was prescriptive, the development of the teaching of a more agile and effective way when being known in advance by the students and the teaching staff through the tool normalised and institutionalised of the educational guides.

#### === ADAPTATION OF THE METHODOLOGIES ===

\* educational Methodologies that keep

Lesson magistral: they will develop by means of synchronous virtual sessions that they will be able to be complemented with videos or other didactic materials.

Resolution of problems: it will be proposed to the students series of problems so that they work on them and that will be reviewed in synchronous virtual sessions.

Practices of Laboratory: it will make only by means of the evaluation of industrial chemical processes by means of the handle of a Chemical processes simulation software.

Educational Methodologies that modify

None adapt all the methodologies to the non face-to-face modality

\* Mechanism non face-to-face of attention to the students tutoring.

differentiate two types of mechanisms non face-to-face of attention to the students: generals and individual.

Generals: The lecturers in the schedule established by the centre will connect in a virtual classroom to which will assist all the students and in which the lecturers will orient on the material supplied to the students or will expand concepts according to the established in the educational guide.

Individual: The lecturers will attend in their schedule of tutoring to the students in the virtual room.

\* Modifications (if they proceed) of the contents to give

there are not modifications

\* additional Bibliography to facilitate the self-learning

is not necessary

\* Other modifications

=== ADAPTATION OF THE EVALUATION === \* Test already made Proof XX: [previous Weight 00%] [Weight Proposed 00%] ...

\* Pending proofs that keep Proof XX: [previous Weight 00%] [Weight Proposed 00%] ...

\* Proofs that modify [previous Proof] => [new Proof]

\* New test

\* additional Information

Vulnerable students: It will be made a methodological adaptation, facilitating them additional specific information when it is proved that they cannot have access to the contents provided by the conventional ways.

Evaluation: The systems of evaluation will be developed face to face except Resolution of the university board that indicate that they have to do innon face to face mode, making of this way through the different tools put to disposal of the teaching staff.
