| Methodologies        |   |
|----------------------|---|
|                      | Description   |
| Master Session       | Lesson magistral with material of support and audiovisual means. Realise an exhibition of the main contents of the matter so that the almno can understand the scope of the same and facilitate his understanding.              |
| Laboratory practises | Development and resolution of practical cases by means of the use of suitable computer tools for the contents of the matter. The tools to use are inside the available software by the University or will be of free character. |

| Methodologies           | Description   |
|-------------------------|---|
| Master Session          | In the classes of laboratory, the professor will guide and will assist to the students that will work in the classroom resolving cases and questions. In the sessions megistrales the professor will attend, will orient and will resolve the doubts to the students on the contents tackled in the theoretical classes. The students will have occasion to attend to tutorías personalised in the dispatch of the professor in the schedule that the professors will establish to such effect to principle of course and that will publish in the page of the asignatura. These tutorías are allocated to resolve doubts and orient to the students on the development of the contents tackled in the theoretical classes, the practical classes. Likewise, also it will keep a constant communication between the educational and the alumnado through the Network by means of the platform Fear in Faitic. |

| Assessment            |   |               |
|-----------------------|---|---------------|
|                       | Description   | Qualification |
| Multiple choice tests | (*)Proofs scored that will realise along the course, distributed of uniform form and programmed so that they interfere the less possible in the rest of the matters. In these proofs evaluate the competitions A4, A8, A14. | 40            |

Following the own guidelines of the degree will offer two systems of evaluation: continuous evaluation (two options) and non continuous evaluation at the end of the semester. In any of the two systems of evaluation all the competitions of the subject remain evaluated.

#### 1. Continuous evaluation

It will consider that a student has opted by the continuous evaluation when, after knowing the qualification obtained in the first proof, participates in the second.

The continuous evaluation will consist of a group of proofs scheduled and developed along the course, and that will complete with an examination at the end of the semester that will cover total or partially the subject for those students that do not achieve to approve through the proofs realised along the course. The proofs will consist so much in the realisation of the practices of the matter, as in three proofs evaluables, that will effect roughly around the middle of october. November and the begginig od december. Said proofs do not free matter, but each one of them will treat on the contents seen until the moment of realisation of the proof, so much in classes of theory as of practices, is thus that will confer to the last proof a greater weight in the calculation of the qualification that the previous, so that the first proof weighs 20%, and the second and third proof 30% and 50%, respectively.

To approve the matter through the proofs and remain deleted of the realisation of the examination at the end of the semester, the student has to surpass 2/3 of the proofs realised [being one of them the last proof-, and obtain an average in the qualification of 5. The result that begin the student in this case will be the weighted average note of the three test.

The student has right to know the qualification obtained in each task in a reasonable term after his realisation or delivery. Likewise, these tasks are not recoverable, that is to say, if a student can not fulfil them in the day stipulated the professor does not have obligation to repeat them. The qualification obtained in the tasks evaluables will be valid so only for the academic course in which they realise.

The students that have not approved the matter through the proofs, will have to complete the continuous evaluation realising an examination at the end of the semester that will consist in a proof reduced that will suppose 60% of the note that will add to the note obtained in the continuous evaluation (40% in three proofs) .

2. Students that do not opt by continuous evaluation

To the students that do not opt by the continuous evaluation will offer them a procedure of evaluation that allow them reach the maximum qualification. This procedure will consist in a final examination that include the contents developed in the classes of theory and of practices.

3. On the announcement of recovery (July)

For the announcement of recovery (July) the student that did not approve the subject chooses and confirm by email (a week before the examination) if it wishes to be examined entirely on the maximum possible note or if it applies him the procedure of evaluation stipulated in the subject keeping the note obtained in the previous tasks. By defect, to the student save him the results of the proofs realised.

4. Qualification of No Presented

A student will consider no presented if, at most, has participated in the first proof of continuous evaluation. In any another case, the student will consider presented and will receive his corresponding note.

| General     | Introduction to the basic concepts on the general laws of | of Mechanics and T | hermodynamics | as well as to their |
| description | application to the resolution of problems in engineering. |                    |               |                     |
|             |   |                    |               |                     |

- A3 CG3: The knowledge of basic subjects and technologies that capacitates the student to learn new methods and technologies, as well as to give him great versatility to confront and update to new situations
- A5 CG5: The knowledge to perform measurements, calculations, assessments, appraisals, technical evaluations, studies, reports, task scheduling and similar work to each specific telecommunication area.
- A6 CG6: The aptitude to manage mandatory specifications, procedures and laws.
- A12 CE3/FB3: Comprehension and command of basic concepts about the general laws of mechanics, thermodynamics, electromagnetic fields and waves and electromagnetism and their application to solve Engineering problems.

|                         | Description  |
|-------------------------|--|
| Master Session          | Prior personal work:   |
|                         | -Preliminary reading of the proposed bibliography on the subject.                                  |
|                         | During the lectures:   |
|                         | -Presentation of theoretical concepts.   |
|                         | -Experimental demonstrations.  |
|                         | -Audiovisual presentations.  |
|                         | Ulterior personal work:  |
|                         | -Revision of theoretical concepts.   |
|                         | -Weak-point identification.  |
|                         | -Consult the bibliography.   |
| Case studies / analysis | Application of the theoretical concepts to simple cases and situations.                            |
| of situations           | During the lectures:   |
|                         | -Solving of examples.  |
|                         | Ulterior personal work:  |
|                         | -Solving of cases and situations from the bibliography.  |
|                         | -ldentification of weak points which require tutorial aid.   |
| Troubleshooting and / o | r Solving of average-difficulty problems involving one or more theoretical concepts.               |
| exercises               | During the lectures:   |
|                         | -Presentation of solving strategies and techniques by solving example-problems.                    |
|                         | Personal work:   |
|                         | -Solving of problems from the bibliography.  |
|                         | -ldentification of weak points which require tutorial aid.   |
| Laboratory practises    | Prior personal work:   |
|                         | -Preparation of the practical session by studying the corresponding guide and reviewing the theory |
|                         | During the practical session:  |
|                         | -Description of the experiment highlighting which theoretical concepts are involved.               |
|                         | -Training on material and instrumentation handling.  |
|                         | -Execution of the experiment.  |
|                         | -Preliminary result processing.  |
|                         | Ulterior personal work:  |
|                         | -Processing and analysis of the results.   |
|                         | -Weak-point identification.  |
|                         | -Consult the bibliography.   |

| Assessment   |   |               |
|--|---|---------------|
|  | Description   | Qualification |
| Multiple choice tests                                    | Multiple-choice questions about theoretical concepts. Solving of elementary cases and situations related to the topics in both the classroom and laboratory syllabi.            | 25            |
| Short answer tests                                       | Short answer questions about theoretical concepts. Solving of elementary cases and situations related to the topics in both the classroom and laboratory syllabi.               | 25            |
| Practical tests, real task execution and / or simulated. | Practical tests: Solving of problems involving one or more theoretical topics. Execution of real and simulated measurements. Real- and simulated-measurement result processing. | 50            |

Following the particular guidelines of this degree, the students taking this subject will be offered two alternative assessment systems: continuous assessment and end-of-semester assessment.

It will be assumed that a student chooses continuous assessment if he or she takes the 3rd test (see below). Once this test is taken, it will be understood that the student has taken the current term's examination call and he or she will be qualified according to the following criterion regardless of whether he or she takes the final test or not.

# 1)CONTINUOUS ASSESSMENT

Continuous assessment consists of the tests detailed below in this guide which are not retakeable, i.e, if a student is not able to take them in the scheduled date the teaching staff will not be required to repeat them.

The publication date of the marks and the corresponding checking procedure will be given before the tests. As a general rule, the marks of each test will be published before the next one.

The marks obtained in the tests will be only valid for the academic term they have been obtained.

1st test:

a1) Experimental laboratory test comprising the execution of actual measurements and the processing of the results (mark: 0-1 point).

Length: 30 minutes at the end of experimental laboratory session number 3. Its date will appear in the assessment test schedule that the Academic Board of the Degree will approve.

2nd test:

b1) Combined test with multiple-choice and short-answer questions. Questions about theoretical concepts. Solving of elementary cases and situations related to the topics in the classroom syllabus (mark: 0-1 point).

Length: 30 minutes at the end of one of the problem-solving lectures. Its date will appear in the assessment test schedule that the Academic Board of the Degree will approve.

3rd test:

c1) Experimental laboratory test comprising the execution of actual measurements and the processing of the results (mark: 0-1 point).

Length: 30 minutes at the end of experimental laboratory session number 5. Its date will appear in the assessment test schedule that the Academic Board of the Degree will approve.

4th test, continuous assessment final test:

Combined test with:

- d1) 8-12 multiple-choice and short-answer questions, (mark: 0-5 points distributed among them)
- e1) solving of one or two problems, (mark: 0-3.4 points distributed between them)
- f1) solving of a problem comprising the execution of real or simulated measurements and the processing of the results (mark: 0-1.6 points).

Length: 2 hours in the subject's official examination date.

Overall mark calculation.

g1) will be calculated as the sum of the marks obtained in blocks b1), d1) and e1) plus the lowest of 2 points and the sum of blocks a1), c1) and f1)

$$g1 = b1 + d1 + e1 + min\{2, a1 + c1 + f1\}$$

The overall mark will be the lowest of 10 points or q1)

overall mark = min{ 10, g1 }

2) END-OF-SEMESTER ASSESSMENT

Final overall test:

Combined test with:

- d2) 8-12 multiple-choice and short-answer questions, (mark: 0-5 points distributed among them)
- e2) solving of one or two problems, (mark: 0-3.4 points distributed between them)
- f2) solving of a problem comprising the execution of real or simulated measurements and the processing of the results (mark: 0-1.6 points).

Length: 2 hours in the subject's official examination date.

Overall mark calculation:

g2) will be calculated as the sum of the marks obtained in blocks d2), e2) and f2)

$$g2 = d2 + e2 + f2$$

The overall mark will be g2)

overall mark = g2

3) JULY RESIT

Makeup exam:

Combined test with:

- d3) 8-12 multiple-choice and short-answer questions, (mark: 0-5 points distributed among them)
- e3) solving of one or two problems, (mark: 0-3.4 points distributed between them)
- f3) solving of a problem comprising the execution of real or simulated measurements and the processing of the results (mark: 0-1.6 points).

Length: 2 hours in the subject's official resit date.

Final mark calculation:

The students who take the July resit will lose the mark of the previous final test and will get a new mark according to the following criteria:

3A) Students who have chosen continuous assessment

g3A) will be calculated as the sum of the marks obtained in blocks b1), d3) and e3) plus the lowest of 2 points and the sum of blocks a1), c1) and f3)

$$g3A = b1 + d3 + e3 + min{2, a1 + c1 + f3}$$

The overall mark will be the lowest of 10 points or g3A)

overall mark = min{ 10, g3A }

3B) Students who have chosen end-of-semester assessment

g3B) will be calculated as the sum of the marks obtained in blocks d3), e3) and f3)

$$g3B = d3 + e3 + f3$$

The overall mark will be g3B)

overall mark = q3B

The marks g1), g2), g3A) and g3B) will be considered instead of the corresponding overall marks to assign the "matricula de honor" distinction.

-Distribution of the learning aims of the subject which are assessed within each block:

| ASSESSMENT | LEAF | RNIN | G Al | MS |
|------------|------|------|------|----|
| a1         |      |      | A5   | A6 |
| b1         | A12  | А3   |      | A6 |
| c1         |      |      | A5   | A6 |
| d1, d2, d3 | A12  | А3   |      | A6 |
| e1, e2, e3 | A12  |      |      |    |
| f1, f2, f3 |      |      | A5   | A6 |

-Particulars of the learning aims which are assessed:

A12: Understanding of basic concepts on the general laws of Mechanics and Thermodynamics as well as of their application to problem solving.

A3: Knowledge of fundamental subjects which enable the students to learn new methods and technologies, as well as to endue them with versatility to get adapted to new situations.

A5: Knowledge to perform measurements and calculations.

A6: Knowledge and skill to handle specifications of measuring instruments as well as basic standards (SI and ISO80000 parts

|--|--|---------------|
|  | Description  | Qualification |
| Self-assessment tests                                    | Exam questions will be available for students, in order to perform autoevaluation.                       | 0             |
| Practical tests, real task execution and / or simulated. | Three practical exams (ongoing evaluation) will be performed in laboratory. Competencies A3, A4 and A11. | 50            |
| Short answer tests                                       | Three exams (ongoing evaluation) will be performed to evaluate the theory. Competencies A3, A4 and A11.  | 50            |

This subject is organized in two parts: Theory and Practice.

The final grade for the course (FG) is the harmonic average (HA) of both parts, TG (Theory Grade) and PG (Practice Grade). Namely

FG = HA(TG,PG) = 2\*TG\*PG/(TG+PG)

If the two terms (TG and PG in this case) are zero, the harmonic average is zero (0).

To pass the course, FG must be greater than or equal to 5.

Both parts can be evaluated by Continuous Evaluation (CE) or by Final Exam (FE).

The FE will consist of Theory and Practice, and will take place in date and time officially established.

EC will consist of the tasks described in this guide, and are not recoverable, ie, if a student cannot comply within the stipulated period the teacher is not required to repeat them.

If one of the subject parts is passed in the December examinations, its grade will be kept for the July examinations where the student only must be evaluated of the other part. If the student has followed CE in part that remains, he/she will keep the grades.

The CE tasks grades are only valid for the current academic course, being discarded in case the student fails the course.

#### **THEORY**

The Theory part is divided into two subparts: T1 and T2. T1 covers approximately 66% of the syllabus, while T2 the 100% of the syllabus.

The Theory grade is the harmonic average of the grades of these two subparts, ie:

TG = HA(T1,T2) = 2\*T1\*T2/(T1+T2)

#### \*CONTINUOUS EVALUATION (CE):

In CE in Theory, the T1 subpart consists of two exercises (CE1 and CE2) and T2 subpart of one exercise. They will be done approximately in the 5th week, 10th week and the final exam (ie, the third exercise is part of the Review Final).

The syllabus is about 33% of the total for the first exercise (CE1), 66% for the second (CE2) and 100% for the third (T2). The note of the first subpart is T1 = 0.35 \* CE1 + 0.65 \* CE2

If the student has followed CE but has failed the subject, the T1 and T2 grades will be kept for July examinations.

#### \*SEMESTER FINAL EXAM

Any student, whether or not has followed the CE, can take the Final Exam. If the student followed the CE, he/she may discard the results obtained there, and take the Final Exam. In this case, the valid grade will be the FE, canceling the grades that had been obtained previously in the CE.

This Final Exam will have two exercises (T1 and T2) to be done in 90 minutes. Students who have not passed CE will have to present to the entire Final Exam (T1 and T2).

#### \* RECOVERY IN JULY

The Theory Final Exam has the same structure as in the Semester Final Exam and will last 90 minutes. If CE was not followed, the student will have to do both T1 and T2, regardless of the grades in each exercise in December. If EC was followed, the student can do T1 and/or T2, canceling the grades that he/she had previously obtained.

## **PRACTICE**

# \*CONTINUOUS EVALUATION:

The CE of Practice consists of 3 exercises P1, P2 and P3 . P1 will be about Simplez, P2 about Basic Algoritmez (over 60% of the syllabus) and P3 about Full Algoritmez (100% of the syllabus). The exercises will be done in the laboratory and will last approximately 1 hour. P1 will be around the 4th week, P2 around the 8th P2 and P3 around the last week . The Practice CE grade is the weighted average of these three exercises: PG = 0.20\*P1 + 0.35\*P2 + 0.45\*P3

# \*SEMESTER FINAL EXAM

Any student, whether or not has followed the CE, can take the Final Exam. If the student followed the CE, he/she may discard the results obtained there, and take the Final Exam . In this case, the valid grade will be the FE, canceling the grades that had been obtained previously in the CE.

This Final Exam will have one exercise about Algoritmez to be done in the laboratory in 1 hour (approximately). In this case, the Practice Grade is the grade of the Final Exam.

#### \* RECOVERY IN IULY

In July, the student will have a Final Exam similar to the Semester Final Exam.

## GENERAL ISSUES

ACTS- For the CE to be considered in Acts, the student will have do exercise P1 in Practice or EC1 in Theory. Any student following the CE who does not do any of these exercises (P1 or EC1):

His/her grade will not be registered in the acts and, for all purposes, will be treated as those presented for the first time, without having studied before.

He/she could not take the other CE exercises, as they will not be considered.

Note: Prior to an exercise or an exam, the date and procedure for the score review will be published sufficiently in advance.

| Assessment                         | Description   | Qualification |
|------------------------------------|---|---------------|
| Troubleshooting and / or exercises | Following the guidelines specific to the degree program, two systems of assessment will be offered: continuous evaluation and evaluation at the end of the quadmester. In the case of continuous evaluation planning will be in the following way:  Four one hour testing, designed to assess competencies A3, A4 and A10:  1. Test of item 1 (week 3 approximately).  2. Test of items 2 and 3 (week 10 approximately).  3. Test of items 4 and 5 (week 14 approximately).  4. Exercise for solving by small groups and in an individual way (week 14 approximately).  Each of these tests will have an evaluation of 1,10 points.  In adittion, 6% of the rating will be obtained by means of tasks to deliver in the classroom | 50            |

#### Continuous evaluation:

It will be considered that a student has opted by the continuous evaluation when, after knowing the qualification obtained in the first test of an hour, he accept to take part in the elaboración of the groups of work. In this case, the final qualification for a student is given by the formula

$$N = (1/2) \times T + (1/2) \times E$$

where T is the qualification, between 0 and 10, obtained as the weighted average of the qualifications of the five tests of an hour and where E is the qualification, between 0 and 10, obtained in the test of two hours. In this mode, it is considered that a student has successfully completed the course when N is greater than or equal to 5. Before the completion or delivery of each test, the date and procedure for the review of the qualifications obtained will de indicated; these qualifications will be open to the students in a reasonable period of time. The tests are not recoverable, in other words, if a student cannot present himself to realize them in the day stipulated, the professor does not have obligation to repeat them.

Qualifications obtained in the evaluables tests will be valid only for the academic course in which they are realized.

# Evaluation at the end of the quadmester:

Students who do not choose continuous evaluation may be submitted to an examination, which will not necessarily be the same as the single test of two hours of items 1, 2, 3, 4, 5 and 6 of the students that follow the continuous evaluation, which will be evaluated on 10 points. In this mode, it is considered that a student has successfully completed the course when the qualification of the examination is greater than or equal to 5.

## Recovery in July:

The day of the test of recovery, students who have chosen continuous evaluación will be able to opt, if they wish it and before seeing it, for a test where the note is obtained as

$$N = (1/2) \times T + (1/2) \times D$$

where T is the qualification, between 0 and 10, obtained as the weighted average of the qualifications of the five tests of an hour and where D is the qualification, between 0 and 10, obtained in a three-hour maximum test of items 1, 2, 3, 4, 5 and 6. In this mode, it is considered that a student has successfully completed the course when NR is greater than or equal to 5.

In case of not choosing this option, or if they do not qualify to choose it because they have not participated in the continuous evaluation, the recovery examination, not necessarily the same as that taken by the students who have chosen the above mentioned option, will be also a three-hour maximum test of items 1, 2, 3, 4, 5 and 6. In this case, the test will be evaluated on 10 points and it will be considered that a student has successfully completed the course when the qualification of the test is greater than or equal to 5.

## **Qualification of Not Present:**

A student will be deemed not present if he does not opt for continuous evaluation and, at most, he appears to the first individual test of one hour. Otherwise he shall be deemed present and he shall be granted the corresponding qualification.

Training and Learning Results

- FB1 Capacity for the resolution of the mathematical problems that can pose in the engineering. A10
- FB1.2 Aptitude to apply the knowledges on differential and integral calculation.
- FB1.4 Aptitude to apply the knowledges on numerical and algorithmic methods numerical.
- CG4 Capacity to resolve problems with initiative, takes of desisiones and creativity and capacity to A4 communicate and transmit knowledges, skills and destrezas.
- CG3 Knowledge in basic matters that them capacite for the learning of new methods and theories, A3 and endow them of versatilidad to adapt to new situations.

| Contents   |   |
|--|---|
| Topic  |   |
| Subject 1. Introduction.                                 | Sets of numbers and functions of one variable. n-dimensional space. Polar, cylindrical and spherical coordinates.   |
| Subject 2. Continuity of functions of one variable.      | Limits. Continuity. Theorem of the intermediate value. Theorem of Bolzano. Method of bisection.   |
| Subject 3. Continuity of functions of several variables. | Functions of several variables. Limits. Continuity. Theorem of Bolzano.   |
| Subject 4. Derivation of functions of one variable.      | Derivation of a function in a point. Derivative function, derivative successive, properties. Rule of the chain. Implicit derivation. Derivation of reverse functions. |

| Subject 5. Applications of the derivative.                 | Maxima and minimum. Theorem of the mean value. Rule of L'Hopital. Local study of the graphic of a function. Taylor polynomial. Method of Newton. |
|--|--|
| Subject 6. Differential of functions of several variables. | Directional derivatives. Partial derivatives. Jacobian matriz. Rule of the chain. Higher order derivatives. Differential operators.              |
| Subject 7. Applications of the differential calculation.   | Extreme values. Extreme values with equality constraints. Method of Newton.  |

| Planning                           |             |                             |             |

| Assessment                         |  |               |
|------------------------------------|--|---------------|
|                                    | Description  | Qualification |
| Troubleshooting and / or exercises | Competencies A3, A4 and A10  | 40            |
|                                    | First session (1 hour): Subject 1. (Aprox. week 5).  |               |
|                                    | Second session (1 hour): Subjects 2 and 3. (Aprox. week 8).  |               |
|                                    | Third session (1 hour): Subjects 4 and 5. (Aprox. week 11).  |               |
|                                    | Fourth session (1 hour): Subject 6. (Aprox. week 14).  |               |
|                                    | The four previous sessions add 40% of the total note. The punctuation of each one of them will be of 10%.                                  |               |
| Troubleshooting and / or exercises | Competencies A3, A4 and A10. Final examination on the subjects 1, 3, 6 and 7 of the matter. His punctuation will be 60% of the total note. | 60            |

Following the own guidelines will offer two systems of evaluation: continuous evaluation and evaluation at the end of the term

**1. Evaluation continued** will consider that a student has opted by continuous evaluation when, after having presented to the first session of continuous evaluation, deliver to the professor before 17 of October, the leaf of registration in this type of evaluation. Once expressed by writing his wish to take part, will not be able to change the option of evaluation. The continuous evaluation features of the four sessions that are presented in this guide and of the final examination. The sessions are not recoverable, that is to say, if a student can not present to realise them in the day stipulated by the professor, this does not have obligation to repeat them. Before the realisation of each session will indicate the date and procedure of review of the qualifications obtained that they will be public in a reasonable term of time (generally a week).

The final note of a student that do continuous evaluation will obtain by means of the formulae

 $N = (1/10) \times C + (6/10) \times E$ 

C: Note, between 0 and 40, obtained like the sum of the notes of the sessions of an hour.

E: Note, between 0 and 10, obtained in the final examination on the subjects 1, 3, 6 and 7 of the matter.

In this modality, a student will be approved when N was main or equal than 5. The qualification obtained in the tasks evaluables will be valid so alone for the academic course in which realise.

#### 2. Evaluation at the end of the cuatrimestre.

Students that do not follow continuous evaluation will be able to present to a final examination, that will not be necessarily the same that the one of the continuous evaluation, on all the subjects of the matter. The date of this examination will be the same in which will take place the final examination of the continuous evaluation. In this case, the examination will be evaluated between 0 and 10 points and a student will be approved when the note of his examination are main or equal than 5.

#### 3. Recovery in the month of July (second announcement)

The day of the examination of recovery, the students that chose continuous evaluation, will be able to opt, if they wish it, to an examination where the note obtain

 $NR = (1/10) \times C + (6/10) \times D$ 

C: Note, between 0 and 40, obtained like the sum of the notes of the sessions of an hour.

D: Note, between 0 and 10, obtained in an examination on the subjects 1, 3, 6 and 7 of the matter.

In this modality a student will be approved when NR was main or equal than 5.

In case of no choose this option, or of not being able to do it by have not followed continuous evaluation, the examination of recovery will be on all the contents of the matter and will be marked between 0 and 10. This examination will have a maximum length of three hours and will not be necessarily the same that the one of the continuous evaluation. A student will be approved when the note of his examination are main or equal than 5.

# 4. Note of No Presented

A student will consider no presented if, at most, has taken part in the first session of continuous evaluation. In any another case, the student will consider presented and will receive his corresponding note.

|--|--|---------------|
|  | Description  | Qualification |
| Troubleshooting and / or exercises                       | 3 exercises to be done during the time schedule for lecture sessions. Each one is referred to one or two of the most relevant topics in the course. Each exercise consists of two or more questions. Maximum qualifications of 1, 2, and 2.5 points will be assigned, respectively.  Capabilities A4 and A13 are evaluated by means of these tests.  | 55            |
| Practical tests, real task execution and / or simulated. | 5 evaluation exercises will be done along the semester. They will be conducted in medium-size groups. 3 of them will concern circuit simulation, 0.75, 1 and 1.25 points, respectively, being assigned. The 2 remaining exercises will refer to circuit implementing and testing (with maximum qualifications of 0.5 and 1 points, respectively). In these exercises skills concerning join work will be evaluated. Capabilities A3 and A13 are evaluated by means of these tests. | 45            |

Additionally to the evaluation system above described, the student may choose to do a final exam. This exam will have the same characteristics than exercises named "Solving problems and/or exercises ", being evaluated among 0 and 10 points.

The student, in agreement to the official academic-year schedule, will have two opportunities during the academic year to pass the course.

- **1. First opportunity at the end of the semester (end of semester).** The student is free to choose the continuous evaluation system above described, without excluding the possibility to do a final exam. Possible cases:
  - Students only doing the continuous evaluation: they are graded with the points obtained in the evaluation.
  - Students doing both the continuous evaluation and the exam: they are graded with the best of both qualifications.
  - Students only doing the final exam: they are graded with the points obtained in the exam.
- **2. Extraordinary exam.** Students not passing the course at the end of the semester may do a final exam like the aforementioned. Points reached in it (among 0 and 10) will be the final grade.

**Additional comment:** Doing 4 or more tests and/or the final exams will prevent the student to get the "Not presented" mark.

Re-scheduling of tests. In case of missing a test, instructors have not any compulsion to rescheduling.

Test results. Before each test, the date and revision procedure of assigned grading marks will be indicated. Such dates will

imply a reasonable delay (in general, not greater than three weeks) between the date of test and the release of the grading marks.

#### Sources of information

James W. Nilsson, Electric Circuits,

Enrique Sánchez, Carmen García Mateo, Material docente, Página web,

J.H. McClellan, R.W. Schafer, M.A. Yoder, Signal Processing First,

J. W. Nilsson's book will be the basic course reference. It is a book covering all the course content in more extension and by using a very clear language. It includes a number of exercises, both proposed and solved. A number of editions are available, in general with little differences among them. It is recommended to the students to use the English editions.

Additionally, the students will have available in the course web site some teaching material (extended lectures notes, practice handbooks, exam examples).

McClellan et al. book is mentioned as a complementary reference, specially indicated for signal processing and filtering lessons. This book will be used in a second year course devoted to digital signal processing.

#### Recommendations

# **Subjects that continue the syllabus**

Physics: Fundamentals of Electronics/V05G300V01305

Digital Signal Processing/V05G300V01304

Signal Transmission and Reception Techniques/V05G300V01404

Microwave Circuits/V05G300V01611

Radio Frequency Circuits/V05G300V01511

Analogue Electronics/V05G300V01624

Engineering of Electronic Equipment/V05G300V01523

#### Subjects that are recommended to be taken simultaneously

Mathematics: Calculus II/V05G300V01203

## Subjects that it is recommended to have taken before

Mathematics: Linear Algebra/V05G300V01104 Mathematics: Calculus I/V05G300V01105

#### Other comments

It is strongly recommended that students are familiar with complex numbers, trigonometric functions, linear equation system solving, elemental function derivatives and computation of simple integrals.

| Assessment  |               |
|-------------|---------------|
| Description | Qualification |

| Troubleshooting and / or exercises | Proof in which the students have to solve series of problems and/or exercises in a time/condition established by the professor. In this way, the students have to apply their knowledge.  In this proof the skills A10 and A12 are assessed                                 | 60 |
|------------------------------------|---|----|
| Long answer tests and development  | Final examination: Proof for evaluation of the skills that includes open questions on a subject. The students have to develop, relate, organise and present their knowledge about the subject in an extensive answer. In this proof the skills A3, A10 and A12 are assessed | 40 |

Following the guidelines of the studies, two systems of evaluation will be offered to the students enrolled in this subject: either continuous evaluation or evaluation at the end of the semester. Criteria for both are detailed below.

#### 1. CONTINUOUS EVALUATION.

- The student that receive it this system of evaluation will be able to achieve a maximum grade of 6 points.
- The students must complete three evauable tasks. The preliminary schedule and the weight of each task in the final grade are:
  - Task 1. Week 4 (approximately). Topic 1. Weight 10%. EC1 up to 1p.
  - o Task 2. Week 8 (approximately). Topics 2 to 4. Weight 20%. EC2 up to 2p.
  - o Task 3. Week 12(approximately). Topics 5 and 6. Weight 30%. EC3 up to 3p.
- The date and review procedure of the obtained marks will be officially communicated before the completion or delivery of eac task. Students will have the opportunity to be informed about the status of each task and review their evaluation within a reasonable period of time.
- The task are not recoverable. If a student cannot fulfilled them in the stipulated term, the professor is not bound to repeat them.
- The qualification for students who opt for continuous evaluation (EC) will be calculate as the sum of the obtained marks in the three tasks: EC=EC1+EC2+EC3.
- The obtained qualification (EC) will be valid only for the current academic course.
- It will be considerer that a student follows this continuous evaluation system when after completing the first task the student carries out the second task.

#### 2. FINAL EVALUATION AT THE END OF SEMESTER.

- This procedure will consist in a final examination that includes the contents developed in the classes of theory and practice.
- This exam will be mandatory for all students. There are three cases:
  - For students that do not opt by the continuous evaluation points reached in it (among 0 and 10) will be the final grade.
  - Students doing the continuous evaluation: they are graded with the points obtained in the evaluation follow the next:
    - The part of the exam corresponding to topics 7 and 8 is mandatory for all of them. (Score EC4 up to 4p.)
    - If (EC1+EC2) is less than 1, the part of the exam corresponding to topics 1 to 4 is mandatoty. In other case thay can take this part to improve the sum (EC1+EC2)
    - If EC3 is less than 1, the part of the exam corresponding to topics 5 and 6 4 is mandatoty. In other case thay can take this part to improve the sum EC3
    - The final score is EF=(EC1+EC2)+EC3+EC4

### 3. RETAKE IN THE JULY SESSION.

- It will consists on a final examination as the aforementioned.
- For students in continuous evaluation, the exam is divided in three parts corresponding to the qualifications (EC1+EC2), EC3 and EC4. Students will take necessarily the parts of the exam with qualification less than 1. Optionally they will be able to take the rest in order to improve the corresponding qualification. The final qualification

will be EF=(EC1+EC2)+EC3+EC4.

# ADITIONAL COMMENTS:

- It will be considered as presented every student that receives any of the two final exams or two of the exercicies of continuous evaluation.
- If a student has participated in the continuous evaluation and does not pass the course he/she will be considered as presented and will receive a grade of fail, regardless of he/she takes the final exam or not.
- The subject is considered passed if the final grade obtained is equal or greater than 5p.

|--------------------------------------|--|---------------|
|                                      | Description  | Qualification |
| Troubleshooting and / or exercises   | Five "one hour sessions", in which the competencies A10/FB1, A3/CG3 y A4/CG4 will be assessed.     | 35            |
|                                      | - 1st session: Theme 1 (4th week aprox.)   |               |
|                                      | - 2nd session: Theme 2 (8th week aprox.)   |               |
|                                      | - 3rd session: Theme 4 (11th week aprox.)  |               |
|                                      | - 4th session: Theme 5 (13th week aprox.)  |               |
|                                      | - 5th session: Theme 6 (15th week aprox.)  |               |
|                                      | These five sessions account for 35% of the score with the following weights - First: 10% (1 point) | :             |
|                                      | - Second: 5% (0,5 points)  |               |
|                                      | - Third: 10% (1 point)   |               |
|                                      | - Forth: 5% (0,5 points)   |               |
|                                      | - Fifth: 5% (0,5 points)   |               |
| Practical tests, real task execution | The students will do a practice of laboratory of the Theme 3 using MATLAB                          | 5             |
| and / or simulated.                  | or MAXIMA (8th week aprox.), in which the competency FB1.4/A10 will be                             |               |
|                                      | assessed.  |               |
|                                      | Its value will be of 5% (0,5 points)   |               |
| Troubleshooting and / or exercises   | Final examination of the Themes 4, 5, 6 and 7, in which the competencies                           | 60            |
|                                      | A10/FB1, A3/CG3 y A4/CG4 will be assessed.   |               |
|                                      | Its value will be of 60% of the score (6 points)   |               |

The evaluation will preferably be continuous. The student will be enrolled in this kind of assessment if he attends the first evaluable session. Once enrolled, it is impossible to unsubscribe from continuous assessment.

The exams of continuous evaluation are not recoverable, ie, if a student can not assist to the test in the date stipulated by the teacher, it is impossible to require the repetition. Before performing each test, both the approximate date of publication of the qualifications and the date and procedure for review them will be communicated. The score obtained at the evaluable tasks will be only valid for the academic year in which the student make them.

In tests of continuous assessment the student will solve problems and exercises of the topics of matter.

## 1. Continuous assessment.

The final score for a student who makes continuous assessment is given by the formula

#### N = C + E

**C**: Note obtained by adding the scores of the six sessions of the items 1, 2, 3, 4, 5 and 6.

**E**: Note of the final examination of the items 4, 5, 6 and 7.

In this mode a student will pass the subject when N is greater than or equal to 5.

## 2. Final evaluation of the semester.

Those students who fail to continuous assessment may be submitted to a final exam of all topics in the subject on the same date that the final exam of continuous assessment. In this exam the competencies A10/FB1, A3/CG3 y A4/CG4 will be

assessed.

These students will be evaluated from 0 to 10 points and theywill pass the subject when the obtained score is greater than or equal to 5.

## 3. Recovery of July.

In the recovery day, students who chose continuous assessment may choose, if desired, for an exam of the items 4, 5, 6 and 7, in which the competencies A10/FB1, A3/CG3 y A4/CG4 will be assessed. The final grade is obtained as

#### NR = C + ER

C: Note obtained by adding the scores of the six sessions of the items 1, 2, 3, 4, 5 and 6.

**ER**: Note the final recovery examination of the items 4, 5, 6 and 7.

In this mode a student will pass the subject when NR is greater than or equal to 5.

If they do not choose that option, the student will be assessed in all the issues on the subject. In this exam the competencies A10/FB1, A3/CG3 y A4/CG4 will be assessed.

In this other method they will be evaluated from 0 to 10 points. A student will pass the subject when the obtained score is greater than or equal to 5.

#### 4. Qualification of not presented.

Finally, a student is considered not presented **if he is not enrolled in the continuous assessment and he does not attend any of the examinations** of the subject. Otherwise he is considered presented.

| General           | In this subject we review some basic concepts    |                    | d random pro | ocesses. These concepts |
| description       | are necessary in order to easily follow other su | bsequent subjects. |              |                         |

- A3 CG3: The knowledge of basic subjects and technologies that capacitates the student to learn new methods and technologies, as well as to give him great versatility to confront and update to new situations
- A4 CG4: The ability to solve problems with initiative, to make creative decisions and to communicate and transmit knowledge and skills, understanding the ethical and professional responsibility of the Technical Telecommunication Engineer activity.
- A10 CE1/FB1: The ability to solve mathematical problems in Engineering. The aptitude to apply knowledge about linear algebra, geometry, differential geometry, differential and integral calculus, differential and partial derivatives equations; numerical methods, numerical algorithms, statistics and optimization
- B1 The ability for critical reading of scientific papers and docs.

<sup>\*</sup>The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

| Methodologies           |   |
|-------------------------|---|
|                         | Description   |
| Master Session          | The course is divided in five main topics. Each topic will have a theoretical part that will be exposed |
|                         | by the teacher in big group.  |
|                         | The students will be required to perform a previous reading of the contents.                            |
| Troubleshooting and / o | or Each topic will be complemented with problem resolution.   |
| exercises               | The problems could be developed and solved in big or small group.                                       |
|                         | The students will be required to work previously on these problems.                                     |
| Practice in computer    | Each topic will be completed with one or several sessions of computer practices.                        |
| rooms                   | For this, a software developed by the teachers and specific questionnaires for each topic will be       |
|                         | used. The students will be required to perform a previous reading of the contents.                      |

| Personalized attention             |  |
|------------------------------------|--|
| Methodologies                      | Description  |
| Master Session                     | Students will have the chance to attend tutorial sessions at the teacher's office. Teachers will establish timetables for this purpose at the beginning of the course. This schedule will be published on the subject website. |
| Troubleshooting and / or exercises | Students will have the chance to attend tutorial sessions at the teacher's office. Teachers will establish timetables for this purpose at the beginning of the course. This schedule will be published on the subject website. |
| Practice in computer rooms         | Students will have the chance to attend tutorial sessions at the teacher's office. Teachers will establish timetables for this purpose at the beginning of the course. This schedule will be published on the subject website. |
| Tests                              | Description  |
| Jobs and projects                  | Students will have the chance to attend tutorial sessions at the teacher's office. Teachers will establish timetables for this purpose at the beginning of the course. This schedule will be published on the subject website. |

| Assessment |             |               |
|------------|-------------|---------------|
|            | Description | Qualification |

| Troubleshooting and / or exercises                       | es Twice the semester, students must solve a problem.   |    |
|--|---|----|
|  | In this proof the skils A10, A3 and A4 are evaluated  |    |
| Multiple choice tests                                    | The students must answer a test.  | 10 |
|  | In this proof the skils A10, A3 and A4 are evaluated  |    |
| Practical tests, real task execution and / or simulated. | In group B class, students must answer a questionnaire. The use of computer is allowed. Students can be distributed in pairs. Each couple answers a unique questionnaire. | 10 |
|  | In this proof the skils A10, A3 and A4 are evaluated  |    |
| Jobs and projects  | The students, in groups of 3 or 4, should propose four test questions on a particular topic.  | 10 |
|  | In this proof the skils A4 and B1 are evaluated   |    |
| Other  | At the end of a group B class, each student will correct a problem made by somebody else.   | 5  |
|  | In this proof the skil B1 is evaluated  |    |
| Long answer tests and developmer                         | tFinal exam.  | 50 |
|  | In this proof the skils A10, A3 and A4 are evaluated  |    |

Following the guidelines of the studies, two evaluation systems will be offered to the students inscribed on this subject: continuous evaluation and evaluation at the end of the semester.

The continuous evaluation consists of several tasks.

A student follows the continuous evaluation system if she/he participates in task 3 (approximately in the seventh week of the semester) or any later task. Tasks 1 and 2 may be performed without opting for the continuous evaluation.

#### Students who choose continuous evaluation:

Several tasks are evaluated. The approximate task calendar and the weight of each task in the final grade are listed below.

- Task 1: Individual resolution of a problem. Weight 5%. Week 4
- Task 2: Correction of the task 1 from somebody else. Weight 5%. Week 5
- Task 3: Development of a test. This is done in groups of 4. Weight 10%. Week 7
- Task 4: Individual resolution of a test. Weight 10%. Week 10
- Task 5: Individual resolution of a problem. Weight 10%. Week 12
- Task 6: Answer a questionnaire by couples with the help of the computer. Weight 10%. Week 14

The last task of the continuous evaluation will be a final exam. This will be a smaller version of the exam to be carried out by students who do not opt for continuous evaluation. The weight of the examination in the final grade will be 50 %

Before the completion or delivery of each task, the date and procedure for the review of the obtained marks will be indicated. Students will have the option to know the status of each task and review the correction within a reasonable period of time (a week, generally).

These tasks are not recoverable, what means that if a student cannot fulfill them in the stipulated period, teachers will not be committed to repeat them.

The obtained grade will be valid only for the current academic course.

If a student has participated in continuous evaluation and does not pass the course he/she will receive a grade of fail, regardless of he/she takes the final exam or not.

The final grade for students who opt for continuous evaluation will be calculated as the average between the final exam and the previous tasks marks. To minimize the impact of a possible miss on a task, the average of these will be computed excluding the worst obtained grade. Taking into account that tasks 1 and 2 are two parts of the same exercise, and that jointly weigh 10%, they will be considered as a whole for the purpose of excluding the worst mark.

#### Students who choose for evaluation at the end of the semester:

The possibility of a final examination will be provided to students who do not opt for the continuous evaluation. This exam will be rated between 0 and 10, and this will be the final grade obtained.

# Retake in the July session

Previously to the exam (or at its beginning), students will be asked to choose to be evaluated by continuous evaluation system (described before) or only by the final exam.

The subject is considered passed if the final grade obtained is equal to or greater than 5.

- Notes of the course
- Questionnaires for laboratory
- They include the theoretical contents of the course.
- At the end of each chapter there is a set of problems belonging to any of the books listed in the bibliography and recommended readings. In general these problems are somewhat easier than those from bulletins.

Bulletins of problems contain useful exercises to understand the subject.

<u>Questionnaires for the laboratory</u> include the statements and each practice problems and also some theoretical content. It is very important to read them in advance to carry out the practice.

| General     | The aim of the course is to provide students with basic | skills to program | in a high level lang | uage.      |
| description |   |                   |                      |            |

- A4 CG4: The ability to solve problems with initiative, to make creative decisions and to communicate and transmit knowledge and skills, understanding the ethical and professional responsibility of the Technical Telecommunication Engineer activity.
- A9 CG9: The ability to work in multidisciplinary groups in a Multilanguage environment and to communicate, in writing and orally, knowledge, procedures, results and ideas related with Telecommunications and Electronics.
- A15 CE6/T1: The ability to learn independently new knowledge and appropriate techniques for the conception, development and exploitation of telecommunication systems and services
- A21 CE12/T7: The knowledge and use of basics in telecommunication networks, systems and service programing.

| Learning aims  |                                  |
|--|----------------------------------|
| Expected results from this subject   | Training and Learning<br>Results |
| Ability to express the solution of a simple problem with algorithms using top-down design.   | A4                               |
|  | A21                              |
| Ability to identify the data needed to solve a problem and associate them with appropriate   | A4                               |
| datatypes of the language.   | A21                              |
| Ability to encode simple algorithms with the basic types of instructions: assignment, selection and iteration.                               | A21                              |
| Ability to declare and define functions with proper use of parameters.   | A21                              |
| Ability to manage the operations of I / O and file operations.   | A21                              |
| Ability to define and use structured data types.   | A21                              |
| Ability to define and manage dynamic data structures (lists, stacks, queues and trees).  | A21                              |
| Ability to use library modules and create new functions.   | A15                              |
|  | A21                              |
| Ability to analize a sequence of statements  | A21                              |
| Ability to handle basic tools in an integrated development environment: text editor, compiler, linker, debugger and tools for documentation. | A15                              |
| Ability to use basic concepts of software engineering in the formulation of a small scale project.   | A4                               |
|  | A9                               |
|  | A15                              |
|  | A21                              |

| Contents |  |
|----------|--|
| Topic    |  |
|          |  |

| Topic 1:The computer and programming languages | The computer     Programming concepts, software and programming paradigms                     |
|--|---|
|  | 3. Stages of software development   |
|  | 4. High-level and low-level programming languages   |
|  | <ul><li>5. Source code and object code</li><li>6. Compilers and interpreters</li></ul>        |
|  | 7. The concept of algorithm   |
|  | 8. Flowcharts, seudo code and natural language for the representation of                      |
|  | algorithms  |
|  | 9. General structure of a C program   |
| Topic 2: Basic elements (integers, characters, | 1. Tokens in C: data type, identifier, variable, constant, operator and                       |
| floats and pointers)                           | expression  |
| • •  | 2. Basic data types and attributes: name, type, memory address, size,                         |
|  | value, scope, life.   |
|  | 3. Identifiers  |
|  | 4. Arithmetic operations  |
|  | 5. Logical operations   |
|  | 6. Relacional operations  |
|  | 7. Type conversions   |
|  | 8. Declaration and assignment operations  |
|  | 9. Definition and declaration of pointer variables  |
|  | 10. Basic operations on pointers  |
| Topic 3: Control Instructions (assignment,     | 1. Basic types of control instructions (sequence, selection and repetition)                   |
| conditional, iterative and input / output)     | 2. Selection Instructions (if-else, switch, operator ?)                                       |
|  | 3. Iterative instructions (for, while, do-while), break; and continue; instructions           |
|  | 4.Instructions for standard input/output: printf, scanf                                       |
|  | 5. Compilation Directives   |
| Topic 4: Functions                             | Compliation Directives     Modular or procedural programming, problem reduction               |
| Topic 4. Functions                             | The structured programming paradigm   |
|  | Declaration and definition of functions   |
|  | Functions without parameters  |
|  | 5. Global variables, local and static   |
|  | Parameter communication by value  |
|  | 7. Parameter communication by reference   |
|  | 8. Entering parameters via the Command window: argc, argv []                                  |
|  | 9. Recursive functions  |
| Topic 5: Structured data types                 | 1. Data structures (array, struct, union)   |
|  | 2. One dimensional and two dimensional arrays   |
|  | 3. Strings  |
|  | 4. Declaration and use of data structures   |
|  | 5. Typedef declaration  |
|  | 6. Nested Structures  |
|  | 7. Library functions for string management  |
| Topic 6: Files                                 | 1. Concept of file and stream   |
|  | 2. Standard Flows   |
|  | 3. Text files and binary files  |
|  | 4. Basic operations on files, opening and closing, reading, writing                           |
|  | 5. Access Modes 6. Macros NULL and EOF  |
|  | 7. Input / output libraries   |
|  | 8. Formatted input/output   |
| Topic 7: Dynamic Memory Management             | Introduction to dynamic memory management   |
| Topic 7. Dynamic Memory Management             | Introduction to dynamic memory management     Library functions for dynamic memory management |
|  | 3. Common linked lists: single, double, circular, circular double binary tree                 |
|  | 3. Common mixed hata, angle, addate, circular, circular addate billary tiee                   |
|  |   |
|  | 4. Insertion, replacement and deletion of nodes in linked lists                               |
|  |   |

| Multiple choice tests   | 0           | 4                           | 4           |

| *The information in the | planning table is for | guidance only | and does not take into a | account the hete | erogeneity of the students. |
|-------------------------|-----------------------|---------------|--------------------------|------------------|-----------------------------|
|                         |                       |               |                          |                  |                             |

| Methodologies           |  |
|-------------------------|--|
|                         | Description  |
| Introductory activities | Introduction to theoretical and practical activities.  |
| Master Session          | Plenary sessions that include the realisation of works and programs.                             |
| Laboratory practises    | During the first weeks of the term the student codifies, compiles and documents programs guided  |
|                         | by the instructor. Some of these activities will be evaluated.                                   |
| Projects                | During the second half of the term, the student must complete a medium complexity project, under |
|                         | the instructor supervision, which includes individual and in group activities.                   |
| Group tutoring          | Both theoretical and practical issues are discussed in small groups with the instructor.         |

| Personalized attention |  |  |
|------------------------|--|--|
| Methodologies          | Description  |  |
| Master Session         | The webpage of the course informs on the prescheduled office hours that students can consult the instructors. This consulting will be devoted to discard doubts arisen in classroom, laboratory activities and the development of the project. |  |
| Laboratory practises   | The webpage of the course informs on the prescheduled office hours that students can consult the instructors. This consulting will be devoted to discard doubts arisen in classroom, laboratory activities and the development of the project. |  |
| Projects               | The webpage of the course informs on the prescheduled office hours that students can consult the instructors. This consulting will be devoted to discard doubts arisen in classroom, laboratory activities and the development of the project. |  |

| Assessment   |   |               |
|--|---|---------------|
|  | Description   | Qualification |
| Laboratory practises                                     | Assignments and exercises carried out in the laboratory.  | 10            |
|  | These exercises evaluate skills CG4 and CE12/T7.  |               |
| Projects   | The evaluation will consist of three activities: 1) report describing the design of the project, 2) a laboratory test focusing on the main ideas behind the project design and implementation, 3) a final report pointing out the main features and the flawless execution of the project.  This projecto evaluate skills CG4, CG9, CE6/T1 and CE12/T7. |               |
| Multiple choice tests                                    | (*)Realizarase un cuestionario tipo test ao longo do curso.<br>Nesta proba avaliaranse as competencias CE6/T1 e CE12/T7.  | 5             |
| Practical tests, real task execution and / or simulated. | · · · · · · · · · · · · · · · · · · ·   |               |
| Troubleshooting and / or exercises                       | Exercises proposed during the development of the lectures. Final exam.  | 45            |
|  | These proofs will evaluate skills G4 and CE12/T7.   |               |

Below is the planning of the subject by showing lectures and the estimated time of the most important milestones of assessment:

|        | Theory                | Laborator  | y Theory Evaluation    | <b>Laboratory Evaluation</b> |
|--------|-----------------------|------------|------------------------|------------------------------|
| Week 1 | Lecture 1             |            |                        |                              |
| Week 2 | Lecture 2             | Practice 1 |                        |                              |
| Week 3 | Lecture 2 / Lecture 3 | Practice 2 |                        | Practical assignment 1 (EP1) |
| Week 4 | Lecture 3             | Practice 2 |                        |                              |
| Week 5 | Lecture 3             | Practice 3 |                        | Practical assignment 2 (EP2) |
| Week 6 | Lecture 4             | Practice 3 | Web Test 1 (CW1)       |                              |
| Week 7 | Lecture 4             | PL1        |                        | Laboratory Test (PL1)        |
| Week 8 | Lecture 4             | Project    | Classroom Test 1 (PA1) |                              |
| Week 9 | Lecture 5             | Project    |                        | Project Design Report (PR)   |
|        |                       |            |                        |                              |

| Period of exami | nations   |         | Final proof on all the contents of the subject (PFT) | Delivery and defence of the project developed in the laboratory (PR) |
|-----------------|-----------|---------|--|--|
| Week 14         | Lecture 7 | Project |  |  |
| Week 13         | Lecture 7 | PL2     |  | Project Test (PL2)   |
| Week 12         | Lecture 7 | Project | Classroom Test 2 (PA2)                               |  |
| Week 11         | Lecture 6 | Project |  |  |
| Week 10         | Lecture 6 | Project | Web Test 2 (CW2)                                     |  |

-----

In all courses the School offers two evaluation modes: Continuous evaluation and comprehensive evaluation. The student must opt to the latter one explicitly, no latter than the grade of the first practical evaluation in the course is officially reported (PL1).

The continuous evaluation will be considered as "approved" if the final grade obtained by the student is at least 5. This final grade is the harmonic mean between the theory and practice, calculated as follows:

 $N_{F} = (2*NP* N_{T})/(NP+ N_{T})$ 

NP (Max. 100%) = EP (Max. 20 %)+ PL1 (Max. 20 %)+PL2 (Max. 20%)+PR (Max. 40 %)

 $N_{\tau}$  (Max. 100%) = CW (Max. 10 %)+PA1 (Max. 10 %)+PA2 (Max. 20 %)+PFT (Max. 60%)

The use of the harmonic means implies that both NPand  $N_T$  must be above 3.3 to approve the course. In any case, the harmonic means must no be inferior to 5.

No evaluation of any activity in the continuous evaluation mode is repeatable; that is, an instructor is not obligued to reschedule an evaluated activity missed by a student. No evaluation will be enforced after the end of the term the student is enrolled to.

The comprehensive evaluation consists of practical programming exercices, in paper and with computer, and the presentation on a project report.

NP (no present) will be granted:

- 1. In continuous evaluation when no asssignment after the first is graded (PL1)
- 2. In comprehensive evaluation when no assignment is graded

-----

University regulations allow students to take an aditional test to approve the course:

- In the continuos evaluation mode the student should approve a theoretical exam, should do a code implementacion on paper and/or computer and design and implement an extension of the project. The student can:
  - Waive the theoretical exam if his/her theory grade is not under 5 (N<sub>T</sub> no lower than 50%);
  - Waive the practical test, i.e., project plus programming if the Laboratory grade obtained in the term was at least 50 %.
  - $\circ~$  Nonetheless, the student can take, if he/she wishes so, the theoretical and lab exams.
- In the comprehensive evaluation mode the student should approve a theoretical exam, should do a code implementation on paper and/or computer and design and implement a project. Students under continuos evaluation mode can opt for this alternative evaluation mode.

The student that can opt of voluntary form by one or another option will be able to do it until the moment of delivery or realisation of the corresponding proofs.

-----

The note obtained in the continuous evaluation does not save of a course for the following.

-----

In case of detection of plagiarism in any of the works/test realised the qualification will be of suspense (0) and the professors

will communicate to the direction of the school the subject so that it take the measures that consider timely. In the case that the plagiarism detect in any of the works/test of continuous evaluation will not allow that the student follow this procedure of evaluation.
