

(*)Facultade de Química

Presentation

The studies of Chemistry have a large tradition at the University of Vigo, where it has been taught during more than 30 years. The establishment of the University System of Galicia in the 90s and the current process of implantation of the European Space of Higher Education (EEES) modified the offer of degrees, but not the pioneering spirit of the chemists in research or in the quest for a better service to the society.

Degrees given in the Faculty

Degree in Chemistry

- Masters And Doctorates:
 - Industry and Chemical Research and Industrial Chemistry
 - Theoretical chemistry and Computational Modelling
- Master:
 - Science and Technology of Conservation of Fishing Products

Web page

General description	<p>"Machine translation into english of the original teaching guide"</p> <p>The main aim of this subject is to give the students the methodology, direction, management and organisation of projects in the field of the Chemistry. With the knowledge in Chemistry, Chemical Engineering and other affine matters, the student has to be able to develop a Project in Chemistry. At the end of the course the student has to be able to draft, schedule, execute and direct industrial projects in the field of the Chemistry</p>			

Competencies	
Code	
C19	Apply knowledge and understanding to solve basic problems of quantitative and qualitative nature
C20	Evaluate, interpret and synthesize data and chemical information
C22	Process and perform computational calculations with chemical information and chemical data
C23	Present oral and written scientific material and scientific arguments to a specialized audience
C24	Recognize and analyze new problems and plan strategies to solve them
D1	Communicate orally and in writing in at least one of the official languages of the University
D3	Learn independently
D4	Search and manage information from different sources
D5	Use information and communication technologies and manage basic computer tools
D6	Use mathematics, including error analysis, estimates of orders of magnitude, correct use of units and data representations
D7	Apply theoretical knowledge in practice
D8	Teamwork
D9	Work independently
D12	Plan and manage time properly
D13	Make decisions
D14	Analyze and synthesize information and draw conclusions
D15	Evaluate critically and constructively the environment and oneself
D16	Develop an ethical commitment
D17	Develop concern for environmental aspects and quality management
D18	Generate new ideas and show initiative

Learning outcomes		
Expected results from this subject	Training and Learning Results	
Evaluate the feasibility of the realisation of a project related with the competitions of a chemist	C20	D1
	C23	D4
	C24	D5
		D7
		D8
		D9
		D12
		D13

Contents

Topic

Subject 1. The projects in chemistry	Professional competitions of the chemists. Definition and aims of a Project. *Características. Stages and classification of a Project. Organisation. Norms, regulations and legislation
Subject 2. Design of a project	*Analysis Preliminary of feasibility and alternative Study of market Size of the project Location Approach of a project
Subject 3. Engineering of the project	Development of a project, stages, calculations, diagrams of flow and balances. Teams
Subject 4. Economic evaluation of a project	Investment. Costs of production and management Profitabilities Analysis of risk
Subject 5. Environmental evaluation of a project	Preventive Measured pollution and/or of correction Waste Cycle of Life
Subject 6. Documentation of a project	Memory Methods Norms

Planning

	Class hours	Hours outside the classroom	Total hours
Master Session	13	22	35
Seminars	22	58	80
Troubleshooting and / or exercises	2	7	9
Presentations / exhibitions	2	5	7
Multiple choice tests	0	4	4
Long answer tests and development	3	8	11
Jobs and projects	0	4	4

*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies

	Description
Master Session	The sessions *magistrales are theoretical classes to all the group in 13 weeks and of an hour of length (13 *x 1 *h/*sem). They will consist in the exhibition by part of the professor of the most fundamental appearances of each subject, taking like base the available documentation in the platform FEAR. The students will have to work, before each session, the material that provides him the professor related with the content that will treat in each subject.
Seminars	They will give to groups reduced, in 13 weeks (13 *x 2 *h/*sem). The students, with the support of the professor, will realise concrete projects (total or partial) of industrial installations, applying the knowledges purchased in the career. They will use computer programs of simulation to build and design the projects realised. It will realise in the classroom of computing.
Troubleshooting and / or exercises	In each subject, that was necessary, will put to disposal of the students a bulletin of problems. Some of these problems will resolve in class and others will have to be resolved by the students of individual form and deliver them so that they are corrected by the professor.

Presentations / exhibitions	The students of individual form or in group, will have to realise a short exhibition on the results obtained, a discussion of the results together with the conclusions of the project developed along the course
-----------------------------	---

Personalized attention

Methodologies	Description
Master Session	It will give them to know to the students, to principle of course, the schedules of *tutorías in which they will resolve the doubts that exist regarding the theory, problems and works.
Troubleshooting and / or exercises	It will give them to know to the students, to principle of course, the schedules of *tutorías in which they will resolve the doubts that exist regarding the theory, problems and works.
Seminars	It will give them to know to the students, to principle of course, the schedules of *tutorías in which they will resolve the doubts that exist regarding the theory, problems and works.
Presentations / exhibitions	It will give them to know to the students, to principle of course, the schedules of *tutorías in which they will resolve the doubts that exist regarding the theory, problems and works.
Tests	Description
Multiple choice tests	It will give them to know to the students, to principle of course, the schedules of *tutorías in which they will resolve the doubts that exist regarding the theory, problems and works.
Long answer tests and development	It will give them to know to the students, to principle of course, the schedules of *tutorías in which they will resolve the doubts that exist regarding the theory, problems and works.
Jobs and projects	It will give them to know to the students, to principle of course, the schedules of *tutorías in which they will resolve the doubts that exist regarding the theory, problems and works.

Assessment

	Description	Qualification	Training and Learning Results
Troubleshooting and / or exercises	The students will have to deliver, in the terms indicated, the problems proposed	5	C19 C20 C22 C24 D3 D4 D6 D7 D8 D9 D12 D14 D15 D18
Presentations / exhibitions	The students will realise an exhibition of the project realised	10	C23 D1 D3 D5 D8 D9 D12 D14
Multiple choice tests	They will realise two test type test along the course. One when finalising the two first subjects and the another when finalising the subject 3. The length of the same will be between 20 minutes and 1 hour	10	C19 D3 D7 D9 D12 D14
Long answer tests and development	It will realise a long proof of all the matter of the *asignatura	35	C19 D3 D7 D9 D12 D14

Jobs and projects	The students will realise and will deliver in the dates indicated, all the parts of the project that proposes him to principle of course	40	C20 C22 C24	D1 D3 D4 D5 D6 D7 D8 D9 D12 D13 D14 D15 D16 D17 D18
-------------------	--	----	-------------------	---

Other comments on the Evaluation

FIRST ANNOUNCEMENT To

surpass the *asignatura is compulsory to obtain, like minimum 50% of the qualification assigned to the total realisation of the project (project, seminars and presentation/exhibition), being necessary, besides reach like minimum a 3 on 10 points in the final proof to take into account the other elements of evaluation.CONDITION

OF PRESENTED: The participation of the student in any one of the proofs written, the delivery of some work, or the assistance to two or more sessions of seminar it will involve the condition of presented and therefore the allocation of a qualification;SECOND ANNOUNCEMENTIn this announcement the students will have to present to those parts of the *asignatura that have not been surpassed previously.Ethical commitmentit expects that the present student a suitable ethical behaviour. In case to detect a no ethical behaviour (copy, plagiarism, utilisation of unauthorised electronic devices, for example), will consider that the student does not gather the necessary requirements to surpass the matter.

Seminars	*Plantearanse *cuestiones And enabling problems understanding and *profundizar in the theoretical aspects presented in the *sesions *maxistrales. Besides the students presented subjects related with the subject.

Personalized attention

Methodologies Description

Seminars	During all the teaching period the students will be able to consult all type of doubts related with the subject how in the tutorías
----------	---

Assessment

	Description	Qualification	Training and Learning Results	
Seminars	It will value the assistance, realisation and discussion of the *cuestiones posed by the professor. Also the preparation and exhibition by part of the students of subjects related with the matter	40	C5 C8 C19 C20 C23	D1 D3 D4 D5 D7 D8 D9 D12 D13 D14 D15
Short answer tests	They will realise two short proofs. The first of them will suppose 36% of the final note whereas second will suppose 24% of the final note. To surpass the matter is necessary to reach a minimum of a 4 in each one of the short proofs.	60	C5 C8 C18 C19 C20	D1 D7 D12 D13

Other comments on the Evaluation

It is compulsory the assistance to all the planned activities that comport evaluation. The participation in 20% of the activities of evaluation of the seminars along the *cuatrimestre or in any of the short proofs of planned evaluation will involve the condition of no presented.

Evaluation of July: The students that do not surpass the matter at the end of the *cuatrimestre will have to do a proof written *q1*ue consisted of two part that correspond with the evaluated in the two short proofs realised during the course. It will not be necessary to realise the part of the proofs *cortacuya qualification was equal or upper to 4 on 10 keeping the qualification obtained. *Estan. This proof will have a value of 60% and will substitute the results of the short proofs. The remaining elements of evaluation are not recoverable and the qualifications obtained added to the quoted proof whenever the qualification obtained was equal or upper to 4 on 10. In case to obtain a lower qualification will be this the one who appear like final qualification in the record.

General description	<p>The first part of the subject centres in the structural study and the structure/properties relationship as well as the main methods of preparation of inorganic solids that represent an important contribution to the field of material science.</p> <p>The second part of the subject devotes to the study of the organometallic compounds. It will be developed the basic aspects referred to the obtaining, description of the bonding, spectroscopic characterisation, reactivity and applications of these compounds.</p> <p>In the laboratory will be realised experiences of synthesis and characterisation of coordination compounds, organometallic compounds and inorganic solids.</p>			

Competencies	
Code	
A5	Students have developed those learning skills that are necessary for them to continue to undertake further study with a high degree of autonomy
C2	Demonstrate knowledge and understanding of essential facts, concepts, principles and theories: types of chemical reactions and its main characteristics
C10	Demonstrate knowledge and understanding of essential facts, concepts, principles and theories: properties of aliphatic, aromatic, heterocyclic and organometallic compounds
C12	Demonstrate knowledge and understanding of essential facts, concepts, principles and theories: structural features of chemical elements and their compounds, including stereochemistry
C14	Demonstrate knowledge and understanding of essential facts, concepts, principles and theories: relationship between macroscopic properties and properties of individual atoms and molecules, including macromolecules
C20	Evaluate, interpret and synthesize data and chemical information
C23	Present oral and written scientific material and scientific arguments to a specialized audience
C25	Handle chemicals safely, considering their physical and chemical properties, including the evaluation of any specific risks associated with its use
C26	Perform common laboratory procedures and use instrumentation in synthetic and analytical work
C27	Monitor, by observation and measurement of physical and chemical properties, events or changes, and document and record them in a consistent and reliable way
C28	Interpret data derived from laboratory observations and measurements in terms of their significance and relate them to the appropriate theory
D1	Communicate orally and in writing in at least one of the official languages of the University
D3	Learn independently
D4	Search and manage information from different sources
D5	Use information and communication technologies and manage basic computer tools
D6	Use mathematics, including error analysis, estimates of orders of magnitude, correct use of units and data representations

Contents

Topic	
Subject 1. Inorganic solids: introduction and bases.	Technological importance of the inorganic solids. Classification of solids. Polymorphism, pseudomorphism, polytypism. Formulation of inorganic solids incorporating structural information.
Subject 2. Structural rationalization in inorganic solids.	Sphere packing. Linear, planar, and theoretical densities and packing factors. Interstitial sites in crystal structures. Determining principles of the structure of the solids. Main solid structures.
Subject 3. Defects and no stoichiometry in the solids.	Types of defects. Ionic conductivity. Solid electrolytes. Non- stoichiometric compounds. Solids of different dimensionality. Diffusion.
Subject 4. Methods of preparation of solids.	Ceramic methods. Microwave methods. Sol-gel method. Precursor method. Hydrothermal methods. Chemical vapor deposition and chemical vapor transport (CVD and CVT), etc.
Subject 5. Organometallic chemistry of the main groups elements.	Introduction. Synthesis, properties and applications of the organometallic compounds of Li, Mg, B and Al.
Subject 6. Organometallic chemistry of the transition metals (I)	Introduction. Types of ligands. Bonding. Characterisation.
Subject 7. Organometallic chemistry of the transition metals (II)	Types of organometallic reactions: substitution, oxidative addition, reductive elimination, insertion, reactions of coordinated ligands, etc.
Subject 8. Organometallic chemistry of the transition metals (III)	Reactivity of organometallic compounds: carbonyl, olefin, carbene, and cyclopentadiene complexes.
Subject 9. Organometallic catalysis.	Introduction. Olefin metathesis. Alkene hydrogenation. Carbonylation of methanol. Hydroformylation of alkenes.
Subject 10. Metallic clusters	Introduction. Types. Structure. Properties.
Practices of the chemistry of the coordination compounds (5 sessions)	Preparation and characterisation of some coordination compounds.
Practices of inorganic solids (4 sessions)	Preparation and study of the properties of some inorganic solids.
Practices of organometallic chemistry (4 sessions)	Preparation and characterisation of some organometallic compounds.

Planning

	Class hours	Hours outside the classroom	Total hours
Seminars	13	42	55
Laboratory practises	45.5	20.5	66
Master Session	26	50	76
Short answer tests	4	24	28

*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies

	Description
Seminars	They will devote to the resolution of doubts or questions that arise in the development of each subject, to the exhibition by part of the students of any of the subjects related with the matter, and/or to the resolution of questions, exercises and problems proposed by the professor.
Laboratory practises	They will realise practices of laboratory in which they will apply the theoretical knowledges adquired. The practices will be realised in 13 sessions of 3,5 hours each and the students will have to reflect and interpret the facts observed in the corresponding notebook lab.
Master Session	The students, in an only group, will receive 26 one-hour lectures in which the professor will give to know the most important aspects of each subject.

Personalized attention	
Methodologies	Description
Seminars	The students will be able to consult all type of doubts related with the matter in the scheduled tutorials.
Laboratory practises	The students will be able to consult all type of doubts related with the matter in the scheduled tutorials.

Assessment				
	Description	Qualification	Training and Learning Results	
Seminars	In addition to resolving practical exercises that allow the students to settle the knowledges on the subjects developed in the lectures, and to resolve all the exposed doubts, the classes of seminar will be used to carry out the students continuous evaluation. This process of continuous evaluation will be done through the resolution of exercises related with the contents of the matter as well as the resolution of short questions proposed by the professor. Also it will be able to carry out by means of the preparation and presentation by the students of subjects related with the subject.	30	C20 C23	D1 D3 D4 D5 D6 D7 D8 D9 D14
Laboratory practises	They are compulsory and will value the realisation of the practices of laboratory in which it refers so much to the fulfillment of the experimental aim foreseen how to the interpretation of the observed phenomena and the correct fulfillment of the laboratory notebook. It will be possible that the students have to do an examination.	25	C25 C26 C27 C28	D1 D3 D4 D5 D6 D7 D8 D9 D12 D13 D14 D15
Short answer tests	The students will realise two 2-hours written proofs.	45	A5 C2 C10 C12 C14 C20	D1 D14

Other comments on the Evaluation

Observations: The participation in any of the proofs of planned evaluation and the assistance to two or more sessions of laboratory will involve the condition of presented and, therefore, the allocation of a qualification in the record of the matter. It will be necessary to obtain a minimum of 4 points on 10 in the qualification of each one of the planned short proofs to be able to take into account, in the final qualification, the remaining elements of evaluation. In the evaluation of July the students will have to do a written proof that will consist of two parts that will correspond with the items evaluated in the two short proofs realised during the course. It will not be necessary to realise the part of the proof that, in the corresponding short proof, obtained an equal or upper qualification to 4 on 10, keeping the qualification obtained. This proof will have a value of 45% of the qualification and will substitute to the results of the short proofs. The remaining elements of evaluation are not recoverable and the qualifications obtained will add to the one of the quoted proof as long as the qualification obtained was equal or upper to 4 on 10. In case to obtain a lower qualification, will be this the one who appear as final qualification of the matter.

Web				
General description	This subject will integrate all the previous knowledge of Organic Chemistry, in particular regarding organic synthesis and his consequences in the creation of new stereogenic elements. For this, will use the tools of rethrosynthetic analysis , paying particular attention to the analysis of synthetic proposals that take place with selectivity (chemo-, regio- and stereoselectivity).			

Competencies	
Code	
A1	Students have demonstrated knowledge and understanding in a field of study that builds upon their general secondary education, and is typically at a level that, whilst supported by advanced textbooks, includes some aspects that will be informed by knowledge of the forefront of their field of study
A2	Students can apply their knowledge and understanding in a manner that indicates a professional approach to their work or vocation, and have competences typically demonstrated through devising and sustaining arguments and solving problems within their field of study
A4	Students can communicate information, ideas, problems and solutions to both specialist and non-specialist audiences
A5	Students have developed those learning skills that are necessary for them to continue to undertake further study with a high degree of autonomy
C2	Demonstrate knowledge and understanding of essential facts, concepts, principles and theories: types of chemical reactions and its main characteristics
C10	Demonstrate knowledge and understanding of essential facts, concepts, principles and theories: properties of aliphatic, aromatic, heterocyclic and organometallic compounds
C11	Demonstrate knowledge and understanding of essential facts, concepts, principles and theories: nature and behavior of functional groups in organic molecules
C12	Demonstrate knowledge and understanding of essential facts, concepts, principles and theories: structural features of chemical elements and their compounds, including stereochemistry
C13	Demonstrate knowledge and understanding of essential facts, concepts, principles and theories: main synthetic routes in organic chemistry, including interconversions of functional groups and the formation of carbon-carbon and carbon-heteroatom bonds
C19	Apply knowledge and understanding to solve basic problems of quantitative and qualitative nature
C20	Evaluate, interpret and synthesize data and chemical information
C23	Present oral and written scientific material and scientific arguments to a specialized audience
C24	Recognize and analyze new problems and plan strategies to solve them
C25	Handle chemicals safely, considering their physical and chemical properties, including the evaluation of any specific risks associated with its use
C26	Perform common laboratory procedures and use instrumentation in synthetic and analytical work
C27	Monitor, by observation and measurement of physical and chemical properties, events or changes, and document and record them in a consistent and reliable way
C28	Interpret data derived from laboratory observations and measurements in terms of their significance and relate them to the appropriate theory
D1	Communicate orally and in writing in at least one of the official languages of the University
D3	Learn independently
D4	Search and manage information from different sources
D5	Use information and communication technologies and manage basic computer tools
D7	Apply theoretical knowledge in practice
D8	Teamwork
D9	Work independently
D13	Make decisions

D14 Analyze and synthesize information and draw conclusions
D15 Evaluate critically and constructively the environment and oneself
D18 Generate new ideas and show initiative

Learning outcomes

Expected results from this subject	Training and Learning Results		
1. Recognise structural elements in organic molecules.	A2	C2 C11 C12 C13 C23 C24	D1 D3 D7 D9 D13 D14 D18
2. Propose retrosynthetic sequences of target molecules.	A1 A2 A5	C2 C11 C12 C13 C24	D1 D3 D4 D5 D7 D9 D13 D18
3. Analyse alternative retrosynthetic proposals.	A1 A2 A5	C2 C10 C11 C12 C13 C20 C24	D1 D3 D4 D5 D7 D9 D13 D18
4. Design synthetic sequences to target molecules.	A1 A2 A5	C2 C10 C11 C12 C13 C20	D1 D3 D4 D5 D7 D9 D13 D18
5. Value the use of structure-simplifying reactions.	A1 A2 A5	C2 C10 C11 C12 C13 C20 C24	D1 D3 D4 D7 D9 D13 D14 D18
6. Recognise relationships between functional groups of target molecules.	A1 A2 A5	C2 C10 C11 C12 C13 C20 C24	D1 D3 D4 D7 D9 D13 D18
7. Use properly the functional groups interconversions.	A1 A2 A5	C2 C10 C11 C12 C13 C20 C24	D1 D3 D4 D5 D7 D9 D13 D14 D18

8. Propose synthesis of carbocyclic and heterocyclic compounds.	A1	C2	D1
	A2	C10	D3
	A5	C11	D4
		C12	D7
		C13	D9
		C20	D13
		C24	D14
		C25	D18

Contents

Topic

1. THE DESIGN OF ORGANIC SYNTHESIS.	1.1. Introduction to target-oriented synthesis.
RETROSYNTHETIC ANALYSIS	1.2. Rethrosynthetic analysis. The synthon approach. Transforms and rethrons. Strategic disconnections. The synthesis tree.
	i. Preliminary evaluation.
	ii. Simplifying transforms.
	iii. Powerful transforms.
	iv. Interconversion, addition and removal of functional groups.
	1.3. Computer-based synthetic strategies.

2. CRITERIA OF SELECTION OF DISCONNECTIONS	<p>2.1. One- and two-group C-X disconnections (1,n).</p> <p>i. Synthons and synthetic equivalents.</p> <p>ii. Alternate polarities.</p> <p>iii. Inversion of polarity.</p> <p>iv. Functional groups interconversions.</p> <p>v. Addition and removal of functional groups.</p> <p>2.2. One- and two-group C-C disconnections (1,n).</p> <p>i. One-group C-C disconnections.</p> <p>ii. (1,n) C-C disconnections of difunctionalized compounds.</p> <p>2.3. Tactics of skeletal transformations. Rearrangements and fragmentations.</p>
3. FUNCTIONAL GROUPS INTERCONVERSIONS	<p>3.1. Interconversion of functional groups by substitution, addition and elimination.</p> <p>3.2. Oxidation reactions.</p> <p>i. Transition metals (*Cr and *Mn).</p> <p>ii. Methods based in the generation of "activated DMSO".</p> <p>iii. Hypervalent iodine reagents.</p> <p>iv. Olefin epoxidation and dihydroxylation.</p> <p>3.3. Reduction reactions.</p>
4. CHEMOSELECTIVITY. PROTECTIVE GROUPS IN ORGANIC SYNTHESIS	<p>4.1. Strategies for the selection of protective groups: orthogonal or of modulated sensitivity .</p> <p>4.2. Description of protective groups.</p> <p>i. Sensitive to acids or bases.</p> <p>ii. Sensitive to fluoride.</p> <p>iii. Sensitive to reduction and oxidation reagents .</p> <p>iv. Other protective groups.</p>
5. STEREOCHEMICAL STRATEGIES . STEREOSELECTIVITY	<p>5.1. Description of Stereochemistry.</p> <p>i. Symmetry and chirality. Stereogenic units.</p> <p>ii. Topicity.</p> <p>iii. Relative configuration. Descriptors.</p> <p>5.2. *Stereochemistry in chemical reactions.</p> <p>i. Product selectivity.</p> <p>ii. Simple- and induced-distereoselectivity.</p> <p>5.3. Disconnections based in chiral fragments.</p>
6. DISCONNECTIONS OF UNSATURATED COMPOUNDS	<p>6.1. Stereoselective olefin synthesis .</p> <p>i. Carbanions stabilised by phosphorous: Wittig and HWE reactions.</p> <p>ii. Carbanions stabilised by silicon: Peterson reaction.</p> <p>iii. Carbanions stabilised by sulphur: Julia reaction.</p> <p>iv. Claisen rearrangement.</p> <p>v. Olefin metathesis.</p> <p>6.2. Palladium-catalyzed reactions.</p> <p>i. Heck reaction.</p> <p>ii. Stille, Negishi and Suzuki cross-coupling.</p>
7. FORMATION AND REACTIVITY OF CYCLIC COMPOUNDS. TOPOLOGICAL STRATEGIES	<p>7.1. Formation of saturated carbocyclic and heterocyclic compounds.</p> <p>i. Cyclization reactions. The Thorpe-Ingold effect.</p> <p>ii. Baldwin Rules.</p> <p>iii. Formation of carbocyclic compounds.</p> <p>7.2. Formation of heterocyclic compounds.</p> <p>i. (3+2) Cycloadditions.</p> <p>ii. Condensation of dicarbonyl compounds.</p> <p>7.3. Properties and reactivity of aromatic heterocyclic compounds.</p> <p>7.4. Topological strategies in Retrosynthetic Analysis.</p>
LAB EXPERIMENT 1. Preparation of a-D-glucopyranoside pentaacetate	One session
LAB EXPERIMENT 2. Preparation of b-D-glucopyranoside pentaacetate	Two sessions
LAB EXPERIMENT 3. Reactivity of dimethylsulfoxonium methylide with conjugated and nonconjugated carbonyl compounds: synthesis of epoxides and cyclopropanes.	One session
LAB EXPERIMENT 4. Microwave-assisted Diels-Alder reaction	One session
LAB EXPERIMENT 5. Preparation of an Ionic Liquid. Application in the synthesis of coumarines	Two sessions
LAB EXPERIMENT 6. Suzuki reaction in water	One session
LAB EXPERIMENT 8. Total synthesis of a natural product: caffeic acid phenethyl ester (CAPE)	Four sessions

Methodologies	
	Description
Seminars	In this activity, which is scheduled to take place twice a week, the most complex topics of the subject will be discussed, and the exercises and problems previously proposed by the teaching staff will be solved.
Laboratory practises	Each student will plan and execute the corresponding lab experiments in sessions lasting 3.5 hours. The students will be provided with the explanation of the lab session by the teaching staff. All the observations, calculations and notes for every experiment will be collected in a lab notebook, which will also include the discussion of the questions posed in the experiment description as well as the spectroscopic characterization of the synthesized compounds.
Master Session	The teaching staff will explain the general contents of the course paying particular attention to those considered key topics and of the greater difficulty. In anticipation of each master session, all the handouts and presentations will be made available in the TEMA teaching platform for downloading by the students.

Personalized attention	
Methodologies	Description
Master Session	Resolution of quiz questions and exercises The teaching staff will devote the necessary time to solve the requests and questions raised by the students related to the course syllabus, informing beforehand about his/her availability.
Seminars	Resolution of quiz questions and exercises The teaching staff will devote the necessary time to solve the requests and questions raised by the students related to the course syllabus, informing beforehand about his/her availability.
Laboratory practises	Resolution of quiz questions and exercises The teaching staff will devote the necessary time to solve the requests and questions raised by the students related to the course syllabus, informing beforehand about his/her availability.
Tests	Description
Short answer tests	Resolution of quiz questions and exercises The teaching staff will devote the necessary time to solve the requests and questions raised by the students related to the course syllabus, informing beforehand about his/her availability.
Long answer tests and development	Resolution of quiz questions and exercises The teaching staff will devote the necessary time to solve the requests and questions raised by the students related to the course syllabus, informing beforehand about his/her availability.

Assessment					
	Description	Qualification	Training and Learning Results		
Seminars	The resolution of problems and questions posed in the seminar classes, as well as the homework carried out by the students in those tasks of personal work entrusted by the teachers will be valued. Results of the learning: All the indicated, since the seminars will take place along the course.	20	A1 A2 A4 A5	C2 C10 C11 C12	D1 D3 D4 D5
				C13 C19 C20 C23 C24	D7 D8 D9 D13 D14 D15 D18

Laboratory practises	<p>1.- The work carried out in the laboratory: the assistance to each one of the sessions is compulsory. The attitude and skill of the student in the laboratory and the interpretation of the mechanisms and spectra will be valued (33 % of the final note).</p> <p>2.- The laboratory notebook (27 % of the final note).</p> <p>3.- Written exam: it will consist on theoretical and practical questions related to the lab experiments. It will take place in the official dates established by the Faculty (40 % of the final note).</p> <p>To pass the lab course it is mandatory to have passed each one of the three parts evaluated. Those students who passed the lab course in the academic year 2014-2015 are entitled to keep that grade in the present academic year.</p> <p>In the extraordinary exam the student will answer the written examination and will deliver a new laboratory notebook if required, keeping the qualifications obtained during the course in the others parts of the subject.</p> <p>Results of the learning:</p> <ol style="list-style-type: none"> 1. Recognise structural elements in the organic molecules. 2. Design alternative synthetic sequences. 3. Handle reactions of functional groups interconversions. 4. Propose synthesis of carbo- and heterocyclic molecules. 5. Recognise selective reactions. 6. Recognise the importance of organic synthesis to the advancement of society. 	30	A1 A2 A4	C25 C26 C27 C28
Short answer tests	<p>A short answer exam will be carried out (10%).</p> <p>Results of the learning:</p> <ol style="list-style-type: none"> 1. Recognise structural elements of organic molecules. 2. Propose retrosynthetic sequences. 3. Analyse alternative retrosynthetic proposals. 4. Value the use of structurally-simplifying reactions. 5. Recognise relationships between functional groups. 6. Use properly functional groups interconversion reactions. 	10	A1 A2 A5	C2 C10 C11 C12 C13 C20 C24 D1 D3 D4 D5 D7 D9 D13 D14 D18
Long answer tests and development	<p>A global proof for the evaluation of the competitions acquired in the subject. For passing the subject the students will have to obtain a minimum of 50% in the written proofs (short and long answer). Therefore, the qualification of the remaining parts will only be added when the grade obtained in overall written proofs is equal or higher than two and a half points.</p> <p>Results of the learning:</p> <ol style="list-style-type: none"> 1. Recognise structural elements of organic molecules. 2. Propose retrosynthetic sequences. 3. Analyse alternative retrosynthetic proposals. 4. Value the use of structurally-simplifying reactions. 5. Recognise relationships between functional groups. 6. Use properly functional groups interconversion reactions. 7. Design synthetic sequences. 8. Propose synthesis of carbo- and heterocyclic molecules. 9. Know the reactivity of heterocyclic compounds. 10. Know selective reactions. 11. Propose disconnections in unsaturated compounds. 12. Know the use of protective groups in organic synthesis. 	40	A1 A2 A4 A5	C2 C10 C11 C12 C13 C19 C20 C23 C24 C25 C26 C27 C28 D1 D3 D4 D5 D7 D8 D9 D13 D14 D15 D18

Other comments on the Evaluation

The participation of the students in any of the acts of evaluation of the subject will involve that they purchase the condition of "presented" and, therefore, they will have assigned a qualification. Acts of evaluation are considered the assistance to the classes of laboratory (three or but sessions), the realisation of the written exams and the handling of a minimum of 25% of the homework assigned by the teaching staff.

Evaluation of the July call:

>1) Grade obtained by the students during the course: maximum of 4 points, divided in the qualification obtained by the students along the course in the resolution of the problems, homework, etc (maximum of 1 point) and the realisation of the laboratory exams (maximum of 3 points).

2) Work carried out by the students: maximum of 1,5 points

for the resolution and handling of the exercises proposed by the teaching staff after the evaluation of January, that will be

oriented to the acquisition of the necessary knowledge to pass the matter. This work will be handled in advance to the official date of the exam.

3) Written Tests: maximum of 4,5 points, which will evaluate the knowledge of the matter.

General description	Global knowledge of the chemical processes involved in the environment, analysis of pollutants, control of quality, treatment and management of the pollution. Evaluation of the environmental impact			

Competencies	
Code	
C2	Demonstrate knowledge and understanding of essential facts, concepts, principles and theories: types of chemical reactions and its main characteristics
C4	Demonstrate knowledge and understanding of essential facts, concepts, principles and theories: Basics and tools for solving analytical problems and characterization of chemical substances
C17	Demonstrate knowledge and understanding of essential facts, concepts, principles and theories in: metrology of chemical processes including quality management
C18	Demonstrate knowledge and understanding of essential facts, concepts, principles and theories: principles of electrochemistry
D1	Communicate orally and in writing in at least one of the official languages of the University
D3	Learn independently
D4	Search and manage information from different sources
D5	Use information and communication technologies and manage basic computer tools
D6	Use mathematics, including error analysis, estimates of orders of magnitude, correct use of units and data representations
D7	Apply theoretical knowledge in practice
D8	Teamwork
D9	Work independently
D10	Work at a national and international context
D12	Plan and manage time properly
D13	Make decisions
D14	Analyze and synthesize information and draw conclusions
D15	Evaluate critically and constructively the environment and oneself
D16	Develop an ethical commitment
D17	Develop concern for environmental aspects and quality management

Methodologies

	Description
Seminars	The aim that pursues in the seminars is to settle the knowledges and expand the competitions purchased in the masterclasses, giving practical and representative examples of the fundamental concepts that collect in each subject.
Presentations / exhibitions	Each student will choose, to the start of the course, a subject of which suggest , or another if it is of interest for him, but always related with the program of the Environmental Chemical matter, and will realise a diagram and synthesis of the work to be exposed in a maximum time of 10 min, in which it will include a practical example extracted of one or several scientific articles. The aims to cover are: introduction and/or practical in the bibliographic research, preparation and presentation of the scientific work, comparison of results between different technical, evaluation of the environmental impact, etc... Previous to the exhibition, the student/to will deliver, in a dossier with his name and title of the exhibition, a copy of all the articles consulted and of the presentation of the same. The assistance to the exhibitions is compulsory and any of the questions formulated during his development can fall in the examinations

Teaching and/or informatives events	They include other less conventional activities inside the program of the matter, like the assistance to conferences, webinars of the ACS, "workshops" or congresses that celebrate in the own University, what will allow to the student expand his horizons and begin to go in in contact with other realities further of the faculty, obtaining information at first hand through representatives of companies, of professors of other universities -and, even, of other countries - that will orient them on other opportunities and will promote the mobility of these students. Of this form, pretends transmit to the student the multiple possibilities that can him present in the future, showing him a fan of labour possibilities. These events are subject to the programmings extra-academic of the different centres in the own University, but in any moment overlap with activities programmed previously and, in his case, would look for other alternatives.
Workshops	They would form part of the seminars in which the students will have to resolve by himself same, under the supervision of the professor but with a greater autonomy, real practical suppositions of chemical processes, detection of possible pollutants in which they derive, the environmental impact that produce and design strategies for his control
Master Session	The masterclasses (55 min) pretend to give a global and real vision of the chemical processes that produce in the environment, the interaction between the different compartmentalized means, the pollutants present and those that generate , the most appropriate methodology for his analysis and his environmental control. Each one of the subjects will go documented with scientific articles, whose contents will serve to settle and expand the knowledges purchased in the theoretical classes, and of representative examples of the fundamental concepts that collect each subject. The methodology education-learning will be centred in the student, by what the classes will be headed to motivate a high participation by part of these in the classroom. The platform *Tem@ will be the resource that allow to the student the communication with the professor and his mates, through a virtual application, at the same time to be the source of information of immediate access for them. In her they will be able to find the basic information and documentation on the matter that gives , the diary of activities, the exercises to realise and the qualifications.

Personalized attention

Methodologies Description

Seminars	In the seminars and in the workshops will do a follow-up of the personal work that was realising the student in this moment, related with the matter. They realised experiments of classroom, useful for the problems resolution, including the oral exposition and other complementary works that propose, in function of the evolution of the student in the process of learning
Workshops	In the seminars and in the workshops will do a follow-up of the personal work that was realising the student in this moment, related with the matter. They realised experiments of classroom, useful for the problems resolution, including the oral exposition and other complementary works that propose, in function of the evolution of the student in the process of learning

Assessment

	Description	Qualification	Training and Learning Results
Presentations / exhibitions	The presentations and other activities associated (ACS Webinars, conferences and Meeting/Symposiums) until arriving to the defence of the work.	20	C17 D1 D3 D4 D5 D8 D9 D10 D14 D16 D17
Short answer tests	They will realise two short proofs of one or two hours of length, C1 and C2, along the quatrimester in which it gives the matter and whose dates will be fixed in the chronogram to the start of the course. They are eliminatory.	30	C2 D1 C4 D3 C18 D6 D7 D12 D13 D14 D15 D16

Long answer tests and development	The long proof will have until three hours and in her will go in all the subjects given of the matter and the activities associated to them.	50	C2 C4 C18	D1 D3 D6 D7 D12 D13 D14 D15 D16
-----------------------------------	--	----	-----------------	---

Other comments on the Evaluation

All the partial qualifications will allow to make the final qualification, valuing the attitude of participation and the interest showed by the student along the course. Due to the fact that each one of the subjects will go documented with scientific articles, some question extracted of them will be able to form part of the short proofs and/or long and in the second announcement.

It considers no-presented (NP) not assisting to 25% of the face-to-face hours and/or not realising any of the proofs (short or long) neither participate in the activities programmed. In the moment in that any of the parts have qualification, in records will appear said qualification obtained, although it have not realised any another proof or activity programmed.

In the second announcement, the students will have the opportunity to recover 50% of the matter. This proof contemplates the same contents that require for the long proof and will keep the qualifications of the others sections evaluated along the course.

To achieve approve the matter, the students will have to surpass 50% of all and each one of the proofs and activities program of the matter.

General description	The matter is allocated to contribute to the students basic knowledges of Pharmaceutical Chemistry, a science *interdisciplinar to horse between distinct disciplines of chemical content and of biological content, whose aim is the study of the compounds *bioactivos and in particular his discovery, development, identification and mechanism of action to molecular level.			

Competencies	
Code	
A1	Students have demonstrated knowledge and understanding in a field of study that builds upon their general secondary education, and is typically at a level that, whilst supported by advanced textbooks, includes some aspects that will be informed by knowledge of the forefront of their field of study
A3	Students have the ability to gather and interpret relevant data (usually within their field of study) to inform judgments that include reflection on relevant social, scientific or ethical issues
A4	Students can communicate information, ideas, problems and solutions to both specialist and non-specialist audiences
A5	Students have developed those learning skills that are necessary for them to continue to undertake further study with a high degree of autonomy
C19	Apply knowledge and understanding to solve basic problems of quantitative and qualitative nature
C20	Evaluate, interpret and synthesize data and chemical information
C22	Process and perform computational calculations with chemical information and chemical data
C23	Present oral and written scientific material and scientific arguments to a specialized audience
D1	Communicate orally and in writing in at least one of the official languages of the University
D3	Learn independently
D4	Search and manage information from different sources
D5	Use information and communication technologies and manage basic computer tools
D7	Apply theoretical knowledge in practice
D8	Teamwork
D9	Work independently
D10	Work at a national and international context
D12	Plan and manage time properly
D13	Make decisions
D14	Analyze and synthesize information and draw conclusions
D15	Evaluate critically and constructively the environment and oneself
D16	Develop an ethical commitment
D17	Develop concern for environmental aspects and quality management

Learning outcomes		
Expected results from this subject	Training and Learning Results	
Diferenciate and understand the concepts: droga, fármaco, medicamento and diana farmacológica	A4	C20 D1 C23 D4 D5 D14

Differentiate the types of receptors, as well as a drug *agonista of an antagonist.	A4	C20	D1
	A5	C23	D3
			D4
			D5
			D7
Relate the physical properties-chemical of the drugs with his properties *farmacocinéticas.			D9
			D13
			D14
	A1	C19	D1
	A3	C20	D3
Differentiate the technicians of *farmacomodulación.	A5	C22	D5
		C23	D7
			D8
			D14
	A3	C19	D1
Differentiate an agent *quimioterápico of an agent *farmacodinámico	A5	C20	D4
		C23	D5
			D7
			D8
	A3	C19	D1
Familiarise with the most recent tools in the design of drugs: combinatory chemistry and computer-aided design (methods *QSAR and *Docking)	A4	C20	D3
	A5	C23	D4
			D7
			D9
			D14
Describe the methods of structural analysis *involucrados in the design of drugs and differentiate the type of information that provide	A3	C19	D1
	A5	C20	D3
		C22	D5
		C23	D7
			D9
Identify the different forms of *vehiculización of drugs and his foundation			D14
			D15
	A1	C19	D1
	A3	C20	D3
	A4	C23	D4
Identify the variables of formulation and of composition in the preparation of suspensions and emulsions, and describe his characteristic properties and the phenomena that cause his unsteadiness	A5		D9
			D13
			D14
	A3	C19	D1
	A5	C20	D3
Recognise the main stages of the processes *fermentativos and enzymatic applied to the production of drugs, including so much the phases of production as of purification		C23	D9
			D13
			D14
	A3	C19	D1
	A5	C20	D3
Apply the basic principles of security and control of the pollution in operations and processes oriented to the production of drugs		C22	D4
		C23	D7
			D8
			D12
			D14
			D15
	A3	C19	D1
	A5	C20	D3
		C23	D5
			D8
			D10
			D13
			D16
			D17

Explain the sampling, *pretratamiento and preparation of sample, as well as the appropriate instrumental technicians for the analysis of prime matters, pharmaceutical and compound formulations *bioactivos in biological means

A3 C19 D1
A5 C20 D3
C22 D8
C23 D13
D14

Contents

Topic	
Subject 1. Introduction: general appearances of Pharmaceutical Chemistry	Definitions, aims and scope of the Pharmaceutical Chemistry. *Nomenclature Of drugs and systems of classification. Agents *quimioterápicos and agents *farmacodinámicos
Subject 2. Pharmacological targets	Types of pharmacological targets. You interact drug-target. Acids *nucéicos, enzymes and *proteínas like targets of drugs.
Subject 3. Receptors like targets of drugs	Types of receptors. Drugs *agonistas, antagonistic and *agonistas reverse. Measure and expression of the pharmacological effect. Tachyphylaxis and tolerance
Subject 4. *Farmacocinética And appearances related	Absorption and transport through biological membranes, rules of *Lipinski, *biodisponibilidad. Metabolism, *profármacos. Excretion. Roads of administration and pharmaceutical forms.
Subject 5. Discovery, design and development of drugs	Strategies of research of heads of series, *serendipia, sifted systematic, rational design. *Farmacomodulación. Patents. Essays *preclínicos and clinical. Chemical development.
Subject 6. Strategies of design of drugs	*Modelado Molecular, indirect methods (*QSAR, design of *fármacóforo), direct methods (*docking).
Subject 7. Preparation, analysis and purification of drugs	Production in the pharmaceutical industry. Processes *fermentativos. Processed of drugs.

Planning

	Class hours	Hours outside the classroom	Total hours
Master Session	26	52	78
Seminars	13	39	52
Outdoor study / field practices	3	3	6
Short answer tests	2	4	6
Long answer tests and development	2	6	8

*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies

	Description
Master Session	In these classes the professor/to will present of form structured the general contents of the program, doing emphasis in the appearances but important or of but difficult understanding. Besides, the professor/to will put to disposal of the *alumnado, with *antelación and through the platform *Tem@, the material that will use in said sessions. It recommends to the *alumnado that work previously this material and that consult the bibliography recommended to complete the information. With the end to realise a *seguimiento of the process of study and understanding of the matter, will realise periodic controls during some sessions *magistrales, that will be determined in advance
Seminars	They will devote to argue the most complicated appearances of the subjects treated, to use programs of *modelado molecular that will allow to work with diverse *biomoléculas *cocristalizadas with distinct *ligandos, and also to the presentation of works, investigations, summaries etc., realised by the students/ace and related with the content of the matter
Outdoor study / field practices	It will visit a company of the sector *farmacéutico in which it will be able to appreciate the process of production in all his phases. After the visit the students will have to answer, in schedule of class, to a questionnaire related with the same.

Personalized attention

Methodologies	Description
Seminars	Time devoted by the *profesorado to attend the needs and queries of the *alumnado related with the study of the matter and with the activities developed. The *profesorado will inform in the presentation of the matter on the available schedule.

Assessment

Description		Qualification	Training and Learning Results		
Master Session	They will evaluate the contents developed in the *temario (subjects 1-6) by means of questions that will pose *verbalmente or by writing in the classroom. The questions that formulate by writing will be referents to the contents treated in the two or three previous weeks.	7	A1 A3	C19 C23	D14 D15 D16
Seminars	It will value the assistance and the participation in the classes, the resolution of exercises and questions, the presentation and exhibition of reports, of summaries and of works	23	A1 A3 A4 A5	C19 C20 C22 C23	D1 D3 D4 D5 D7 D8 D9 D10 D12 D13 D14 D16
Outdoor study / field practices	It will value the assistance and active participation in the visit, and the result obtained in the realisation of a questionnaire on the same.	10	A3	C20	D14 D15 D17
Short answer tests	*relizarán 2 short proofs, of 1 *h of length. The first in the week 6 and in her will go in the contended of the *temario explained until this moment. The second when finalising the subject 7 and in her will go in exclusively the contended of the subject 7.	30	A1 A3 A5	C19 C20	D7 D12 D13 D14
Long answer tests and development	Finalised the 6 first subjects will realise a global proof to evaluate the competitions purchased. It is indispensable requirement to surpass the matter reach a minimum of 50% in the proofs written.	30	A1 A3 A5	C19 C20	D7 D12 D13 D14

Other comments on the Evaluation

The participation of the *alumnado in any of the acts of *evaluación of the matter will involve the condition of presented and therefore the allocation of a qualification. They consider acts of evaluation the assistance to seminars (4 or but), as well as the realisation any of the 3 proofs written. To be able to approve the matter the student has to have a note *mínima in some of the distinct sections in which *desglosa the evaluation. This minimum note has to be of 3,5 in the second proof of short answer, and of 4 in the proof of long answer,&*nbsp; in the assessment of the seminars and in the assessment of the exit of studies.Evaluation of the announcement of July1. Punctuation obtained by the students/ace during the course: maximum 4 pointswill conserve the punctuation *obtenida in&*nbsp; the questions *plantedas in the sessions *magistrales (maximum 0,7 points), in the activities related with the visit (maximum 1 point), and in participation in the seminars (maximum 2,3 points).2. Work realised by the students: maximum 2 points Finished the process of evaluation of June, the *profesorado will propose to the students/ace that have not surpassed the matter the realisation of an individual work that allow them purchase the competitions of which will be evaluated in July. This work will have to be delivered and defended by the students before the official examination of this announcement.&*nbsp; Tests writtenThe students/ace will realise a proof written similar to the one of June in which they will be able to obtain a maximum of 4 points

General description	<p>Chemical industry represents one of the most booming sectors in the economy of many countries, being the basis for many other industries like metallurgic, petrochemical, food and electronic ones. Similarly, recent advances on high efficient materials, electronic devices, medical applications, together with new environmental and agricultural technologies are fostered by continuous improvements and innovations in each stage of the process design.</p> <p>Therefore, this subject is devoted to provide the student with a comprehensive approach of Industrial Chemistry, going from the construction and understanding of process flowsheets diagrams of chemical processes with socio-economic interest, to the performance of quality principles underlying them.</p>			

Competencies	
Code	
C16	Demonstrate knowledge and understanding of essential facts, concepts, principles and theories: principles and procedures in chemical engineering
C19	Apply knowledge and understanding to solve basic problems of quantitative and qualitative nature
C20	Evaluate, interpret and synthesize data and chemical information
C22	Process and perform computational calculations with chemical information and chemical data
C23	Present oral and written scientific material and scientific arguments to a specialized audience
D1	Communicate orally and in writing in at least one of the official languages of the University
D3	Learn independently
D4	Search and manage information from different sources
D5	Use information and communication technologies and manage basic computer tools
D6	Use mathematics, including error analysis, estimates of orders of magnitude, correct use of units and data representations
D7	Apply theoretical knowledge in practice
D8	Teamwork
D9	Work independently
D10	Work at a national and international context
D12	Plan and manage time properly
D13	Make decisions
D14	Analyze and synthesize information and draw conclusions
D15	Evaluate critically and constructively the environment and oneself

Long answer tests and development	2	14	16
*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.			

Methodologies	
	Description
Master Session	Presentation of the general aspects of the program, focusing on the fundamental aspects with more difficulties to be understood by the students. The lecturer will give the basic material by Tema platform in order to get the students familiarized with the topic prior to the presentation in class.
Troubleshooting and / or exercises	After each subject, the most relevant aspects will be tackled by means of problem and questions solving.
Tutored works	The students will carry out a work focused on the design of a process for producing some product with industrial interest, taking into account the knowledge acquired during the master sessions.
Presentations / exhibitions	The students have to defend their tutored works in front of a jury made up of lecturers from the departments of Chemical Engineering or Analytical Chemistry and/or professionals from chemical industries
Outdoor study / field practices	Different outdoor studies will be carried out throughout the course, in order to get a deeper insight into the processes explained during the master sessions. Priority will be given to top companies of our socioeconomic environment.

Personalized attention	
Methodologies	Description
Master Session	During tutoring hours, the students can ask the lecturers about any aspect of the subject. In the same way, students can communicate with the teachers via E-mail or Tema platform. The lecturers will show their availability for tutoring on the first day.
Troubleshooting and / or exercises	During tutoring hours, the students can ask the lecturers about any aspect of the subject. In the same way, students can communicate with the teachers via E-mail or Tema platform. The lecturers will show their availability for tutoring on the first day.
Tutored works	During tutoring hours, the students can ask the lecturers about any aspect of the subject. In the same way, students can communicate with the teachers via E-mail or Tema platform. The lecturers will show their availability for tutoring on the first day.
Presentations / exhibitions	During tutoring hours, the students can ask the lecturers about any aspect of the subject. In the same way, students can communicate with the teachers via E-mail or Tema platform. The lecturers will show their availability for tutoring on the first day.
Outdoor study / field practices	During tutoring hours, the students can ask the lecturers about any aspect of the subject. In the same way, students can communicate with the teachers via E-mail or Tema platform. The lecturers will show their availability for tutoring on the first day.

Assessment				
	Description	Qualification	Training and Learning Results	
Troubleshooting and / or exercises	Different troubleshooting will be solved by the students at the framework of their tutored works	10	C16 C19 C22	D3 D5 D6 D7 D9 D14

Tutored works	A work focused on the design of an industrially relevant process flowsheet diagram will be carried out during the term.	20	C16 C20 C22 C23	D1 D4 D5 D6 D7 D8 D10 D12 D13 D14 D15
Presentations / exhibitions	The tutored works will be defended against a jury composed of lecturers from the Departments of Chemical Engineering and Analytical Chemistry and/or professionals from the chemical industry.	10	C16 C23	D1 D5 D8 D12 D13 D14
Outdoor study / field practices	The students must unavoidably attend the outdoor studies in order to get a deeper insight into the processes tackled during the master sessions. A report about questions on the plants will be done by them after each visit.	5	C20 C22	D7 D8 D14 D15
Short answer tests	Short tests will be performed in the middle and at the end of the course. Students will be encouraged to relate new ideas with their own views, and to solve problems based on the new knowledge acquired	10	C16 C19 C20 C22 C23	D3 D7 D9 D12 D13 D14
Long answer tests and development	A final long answer test will be done at the end of the course, and the students will have to have a minimum of 5 out of 10 to pass the course.	45	C16 C19 C20 C22 C23	D3 D7 D12 D13 D14

Other comments on the Evaluation

In order to pass the subject, at least 5 points out of 10 should be achieved in each of the evaluated activities. It is expected that the students show an ethical behaviour concerning plagiarism, use of unauthorized electronic devices or suitable team work. Otherwise, the student will be rated with 0 (fail).

Evaluation in July

The activities that have been obtained a mark higher than 5 will be maintained.

General description	<p>According to the memory of the Degree in Chemistry of the University of Vigo, the End of Degree project is a mandatory subject of 18 credits ECTS in the second term of the fourth course.</p> <p>The objective of the subject is to offer the students the opportunity to apply the knowledges, skills and competences acquired during the Degree studies.</p> <p>The TFG is an original work that each student will do individually under the supervision of one or two tutors. TFG subjects can correspond to experimental and/or theoretical works and/or of bibliographic reviews on subjects related with the contains in the Degree in Chemistry. The final stage of the TFG will consist in a written report and its public presentation.</p>			

Competencies	
Code	
A1	Students have demonstrated knowledge and understanding in a field of study that builds upon their general secondary education, and is typically at a level that, whilst supported by advanced textbooks, includes some aspects that will be informed by knowledge of the forefront of their field of study
A2	Students can apply their knowledge and understanding in a manner that indicates a professional approach to their work or vocation, and have competences typically demonstrated through devising and sustaining arguments and solving problems within their field of study
A3	Students have the ability to gather and interpret relevant data (usually within their field of study) to inform judgments that include reflection on relevant social, scientific or ethical issues
A4	Students can communicate information, ideas, problems and solutions to both specialist and non-specialist audiences
A5	Students have developed those learning skills that are necessary for them to continue to undertake further study with a high degree of autonomy
C1	Demonstrate knowledge and understanding of essential facts, concepts, principles and theories: Major aspects of chemical terminology, nomenclature, units and unit conversions.
C2	Demonstrate knowledge and understanding of essential facts, concepts, principles and theories: types of chemical reactions and its main characteristics
C3	Demonstrate knowledge and understanding of essential facts, concepts, principles and theories in: principles of quantum mechanics and its application in the description of the structure and properties of atoms and molecules
C4	Demonstrate knowledge and understanding of essential facts, concepts, principles and theories: Basics and tools for solving analytical problems and characterization of chemical substances
C5	Demonstrate knowledge and understanding of essential facts, concepts, principles and theories: Characteristics of the different states of matter and the theories used to describe them
C6	Demonstrate knowledge and understanding of essential facts, concepts, principles and theories in: principles of thermodynamics and their applications in chemistry
C7	Demonstrate knowledge and understanding of essential facts, concepts, principles and theories: kinetics of change, including catalysis and reaction mechanisms
C8	Demonstrate knowledge and understanding of essential facts, concepts, principles and theories: main techniques for structural determination, including spectroscopy
C9	Demonstrate knowledge and understanding of essential facts, concepts, principles and theories: characteristic properties of the elements and their compounds, including group relationships and variations in the periodic table
C10	Demonstrate knowledge and understanding of essential facts, concepts, principles and theories: properties of aliphatic, aromatic, heterocyclic and organometallic compounds
C11	Demonstrate knowledge and understanding of essential facts, concepts, principles and theories: nature and behavior of functional groups in organic molecules
C12	Demonstrate knowledge and understanding of essential facts, concepts, principles and theories: structural features of chemical elements and their compounds, including stereochemistry
C13	Demonstrate knowledge and understanding of essential facts, concepts, principles and theories: main synthetic routes in organic chemistry, including interconversions of functional groups and the formation of carbon-carbon and carbon-heteroatom bonds

C14	Demonstrate knowledge and understanding of essential facts, concepts, principles and theories: relationship between macroscopic properties and properties of individual atoms and molecules, including macromolecules
C15	Demonstrate knowledge and understanding of essential facts, concepts, principles and theories in: chemistry of biological molecules and their processes
C16	Demonstrate knowledge and understanding of essential facts, concepts, principles and theories: principles and procedures in chemical engineering
C17	Demonstrate knowledge and understanding of essential facts, concepts, principles and theories in: metrology of chemical processes including quality management
C18	Demonstrate knowledge and understanding of essential facts, concepts, principles and theories: principles of electrochemistry
C19	Apply knowledge and understanding to solve basic problems of quantitative and qualitative nature
C20	Evaluate, interpret and synthesize data and chemical information
C21	Recognize and implement good scientific practices for measurement and experimentation
C22	Process and perform computational calculations with chemical information and chemical data
C23	Present oral and written scientific material and scientific arguments to a specialized audience
C24	Recognize and analyze new problems and plan strategies to solve them
C25	Handle chemicals safely, considering their physical and chemical properties, including the evaluation of any specific risks associated with its use
C26	Perform common laboratory procedures and use instrumentation in synthetic and analytical work
C27	Monitor, by observation and measurement of physical and chemical properties, events or changes, and document and record them in a consistent and reliable way
C28	Interpret data derived from laboratory observations and measurements in terms of their significance and relate them to the appropriate theory
C29	Demonstrate skills for numerical calculations and interpretation of experimental data, with special emphasis on precision and accuracy
D1	Communicate orally and in writing in at least one of the official languages of the University
D2	Communicate at a basic level in English in the field of chemistry
D3	Learn independently
D4	Search and manage information from different sources
D5	Use information and communication technologies and manage basic computer tools
D6	Use mathematics, including error analysis, estimates of orders of magnitude, correct use of units and data representations
D7	Apply theoretical knowledge in practice
D8	Teamwork
D9	Work independently
D10	Work at a national and international context
D11	Adapt to new situations
D12	Plan and manage time properly
D13	Make decisions
D14	Analyze and synthesize information and draw conclusions
D15	Evaluate critically and constructively the environment and oneself
D16	Develop an ethical commitment
D17	Develop concern for environmental aspects and quality management
D18	Generate new ideas and show initiative

Other comments on the Evaluation

TFG is ruled by the norms approved in the Junta de Facultad and published in the web page web of the faculty.
The TFG Commission will do public, with sufficient advance, the criteria of evaluation that will use the tutor and the jury.
The TFG Commission will do public, with sufficient advance, the conditions for the written report and the public defences.
All the information generated by the TFG Commission will be included in the platform Tem@ and/or in the web page of the faculty.
