

(*)Escola Superior de Enxeñaría Informática

Presentation

In 1991, the University School of Technical Engineering in Computer Management of the University of Vigo was created in the Campus of Ourense together with the degree of Technical Engineering in Computer Management, in order to respond to the needs of graduates in Computer Science demanded by the Galician society. In 1999, after the concession to this Centre of the second cycle of the degree in Computer Engineering, it changed its name to Escuela Superior de Enxeñaría Informática (ESEI).

Currently, the Centre offers the following degrees:

- **Degree in Computer Engineering:** A degree adapted to the EEES that incorporates two different professional profiles that are highly attractive in the Galician socio-economic environment:
 - Software Engineering
 - Information Technologies
- **Degree in Artificial Intelligence:** provides the broad, in-depth and multidisciplinary training required by professionals in this field and which is essential to successfully build the intelligent services and applications that are having such an important impact on our lives at all levels.

This is an inter-university degree in the Galician University System, of four courses (240 ECTS), in which the subjects of the first two courses are common to the three universities (A Coruña, Santiago and Vigo). In the third and fourth years, the University of Vigo develops the orientation in Intelligent Information Systems (SII).

- **University Master's Degree in Computer Engineering:** a degree linked to the profession of Computer Engineering, with 90 ECTS and one and a half years adapted to the EHEA. Its objective is to provide the graduate student with in-depth training in management and administration in the area of information technology, as well as solid knowledge in specific technologies associated with different professional profiles in this field. Graduates acquire technical, communication and leadership skills that enable them to start up their own business or to join management positions in the ICT area in companies and organisations.
- **Master's Degree in Artificial Intelligence:** an inter-university degree, offered by the Universities of A Coruña, Santiago de Compostela and Vigo, which is a complete programme for the training of professionals and entrepreneurs in this branch of knowledge.

All the information about the Centre and its degrees is available on the website esei.uvigo.es.

Organization chart

management team

Director
: Arno Formella

- He is responsible for the running of the School, implementing the agreements of the collegiate bodies, executing the budget and representing the Centre both within the University and before institutions and society in general.
- Email: [formella\(at\)uvigo.es](mailto:formella(at)uvigo.es)
- Telephone: +34 988 387 002

Deputy Director of Planning

: Francisco Javier Rodríguez Martínez

- He is responsible for the planning, definition, implementation, evaluation and monitoring of the procedures and processes of the ESEI.
- Email: franjrm(at)uvigo.es
- Telephone: +34 988 387 022

Deputy Director of Academic Organisation

: Rosalía Laza Fidalgo

- She is responsible for the organisation of teaching at the School: timetables, exam calendars, teaching control, control of tutorials...
- Email: rlaza(at)uvigo.es
- Telephone: +34 988 387 013

Deputy Director of Quality

: Eva Lorenzo Iglesias

- She is in charge of ensuring compliance with the Internal Quality Assurance System.
- Email: eva(at)uvigo.es
- Telephone: +34 988 387 019

Secretary of the Centre

: María Encarnación González Rufino

- She is in charge of taking the minutes of the School's collegiate bodies, as well as certifying the agreements taken in them.
- Email: secretaria.esei(at)uvigo.es
- Telephone: +34 988 387 016

Within the management team, the secretary of the school, María Encarnación González Rufino, is the

Equality Liaison Officer

, and is responsible for the dynamisation and implementation of equality policies. This person is the liaison with the

Equality Unit

of the University of Vigo to contribute to the application and monitoring of the measures proposed in the I Plan for Equality between women and men of the University of Vigo, with a view to achieving a more balanced participation of women and men in our University.

In addition to the management team, there are several professors in charge of coordinating the degree courses:

Coordinator of the Degree in Computer Engineering

: Eva Lorenzo Iglesias

Email: eva(at)uvigo.es

Phone: +34 988 387 019

Coordinator of the Degree in Artificial Intelligence

: Lourdes Borrajo Diz

Email: lborrajo(at)uvigo.es

Phone: +34 988 387 028

Coordinator of the Master's Degree in Computer Engineering

: Alma Gómez Rodríguez

Email: alma(at)uvigo.es

Phone: +34 988 387 008

Coordinator of the Master's Degree in Artificial Intelligence

: Francisco Javier Rodríguez Martínez

Email: franjrm(at)uvigo.es

Phone: +34 988 387 022

Location

Escola Superior de Enxeñería Informática.

Campus de Ourense - Universidad de Vigo

Edificio Politécnico. As Lagoas s/n

32004 - Ourense (Spain)

Teléfonos: +34 988 387000, +34 988 387002

Fax: +34 988 387001

Web: esei.uvigo.es

Regulations and legislation

Available on the Centre's website (esei.uvigo.es)

Center services

teaching equipment

14 computer laboratories with 24 individual workstations and different operating systems

1 Electronics Technology laboratory

1 Computer Architecture laboratory

1 end-of-degree project laboratory

6 theory classrooms

6 seminars for group tutorials

added values

Classes in English in various subjects

Guidance teacher in the first year.

E-mail for students.

Storage directory for students, accessible from the Internet.

E-learning platform.

Wireless Internet access from all over campus.

Campus library with 120,000 volumes.

Alumni Delegation.

Premises for student associations.

University residence.

Hall of Degrees and Assembly Hall.

Cafeteria.

Máster universitario en Inteligencia artificial

General description	The aim of this course is to introduce the basics of data engineering, notably in the scope of Big Data. The acquired skills will allow the analysis and the efficient management of heterogeneous information, both structured and non structured, within the development of AI applications, whenever traditional methods show insufficiency.			

Training and Learning Results

Code	
A1	CB6 - Possess and understand knowledge that provides a basis or opportunity to be original in the development and/or application of ideas, often in a research context
A2	CB7 - Students should be able to apply their acquired knowledge and problem-solving skills in new or unfamiliar environments within broader (or multidisciplinary) contexts related to their area of study.
A3	CB8 - the complexity of making judgments based on information that, while incomplete or limited, includes reflections on the social and ethical responsibilities linked to the application of their knowledge and judgments.
B2	Successfully address all stages of an Artificial Intelligence project.
B3	Search and select useful information needed to solve complex problems, handling with fluency the bibliographic sources of the field.
B4	Elaborate adequately and with certain originality written compositions or motivated arguments, write plans, work projects, scientific articles and formulate reasonable hypotheses in the field.
B5	Work in teams, especially multidisciplinary teams, and be skilled in time management, people management and decision making.
C16	Knowledge of the process and tools for data processing and preparation from data acquisition or extraction, cleaning, transformation, loading, organization and access.
D3	Utilizar las herramientas básicas de las tecnologías de la información y las comunicaciones (TIC) necesarias para el ejercicio de su profesión y para el aprendizaje a lo largo de su vida.
D7	Develop the ability to work in interdisciplinary or transdisciplinary teams to offer proposals that contribute to sustainable environmental, economic, political and social development.
D8	Value the importance of research, innovation and technological development in the socioeconomic and cultural progress of society.
D9	Have the ability to manage time and resources: develop plans, prioritize activities, identify critical ones, set deadlines and meet them.

Methodologies

	Description
Lecturing	The teacher will introduce given subjects to the students with the aim to acquire information valuable within a specific scope. CONTINUOUS EVALUATION Mandatory character Facultative attendance GLOBAL EVALUATION Mandatory character
Laboratory practical	Problem or problems of practical character whose resolution requires the understanding and application of the theoretical and practical contents covered by the course. The students can work the solution to the proposed problems individually or in groups. CONTINUOUS EVALUATION Mandatory character Mandatory attendance (min. 75% of lab practices) GLOBAL EVALUATION Mandatory character

Personalized assistance

Tests	Description
Project	Doubts related to the planning and development of the project will be addressed.
Problem and/or exercise solving	Doubts related to the cases to be analyzed will be answered.

Assessment

	Description	Qualification	Training and Learning Results			
Laboratory practical	Several tests aimed to evaluate the understanding of the knowledge exposed in theory and/or practical classes. Learning results evaluated: RA3, RA4	30	A2	B2 B5	C16	D3 D7

Project	Development of a project to evaluate the ability of the students to work autonomously, including their critical spirit and the ability to apply the acquired knowledge to real-world problems. At the end, the students must submit a detailed project report. Learning results evaluated: RA2, RA4	40	A2	B2 B4	C16	D8 D9
Problem and/or exercise solving	Defense of the solution proposed by the student before the teacher and the rest of the students. Learning results evaluated: RA1, RA2	30	A1 A2 A3	B2 B3	C16	D7 D8

Other comments on the Evaluation

CONTINUOUS EVALUATION SYSTEM

TEST 1: Laboratory practical

Description: Several tests aimed to evaluate the understanding of the knowledge exposed in theory and/or practical classes.

Methodology to be applied: Laboratory practical.

% Qualification: 30%.

Minimum %: To pass this part of the course the student has to obtain a grade equal or greater than 5 points (out of 10).

Training: A2,B2,B5,C16,D3,D7.

Learning results: RA3, RA4

TEST 2: Problem and/or exercise solving

Description: Defense of the solution proposed by the student before the teacher and the rest of the students.

Methodology to be applied: Problem and/or exercise solving.

% Qualification: 30%.

Minimum %: To pass this part of the course the student has to obtain a grade equal or greater than 5 points (out of 10).

Training: A1,A2,A3,B2,B3,C16,D7,D8

Learning results: RA1, RA2

TEST 3: Project

Description: Development of a project to evaluate the ability of the students to work autonomously, including their critical spirit and the ability to apply the acquired knowledge to real-world problems. At the end, the students must submit a detailed project report.

Methodology to be applied: Project.

% Qualification: 40%.

Minimum %: To pass this part of the course the student has to obtain a grade equal or greater than 5 points (out of 10).

Training: A2,B2,B4,C16,D8,D9

Learning results: RA2, RA4

GLOBAL EVALUATION SYSTEM

Procedure for choosing the global evaluation modality: students are considered to have chosen the global evaluation system if they do not take Test 1 of the continuous evaluation system.

TEST 1: Laboratory practical

Description: Several tests aimed to evaluate the understanding of the knowledge exposed in theory and/or practical

classes.

Methodology to be applied: Laboratory practical.

% Qualification: 30%.

Minimum %: To pass this part of the course the student has to obtain a grade equal or greater than 5 points (out of 10).

Training: A2,B2,B5,C16,D3,D7.

Learning results: RA3, RA4

TEST 2: Problem and/or exercise solving

Description: Defense of the solution proposed by the student before the teacher and the rest of the students.

Methodology to be applied: Problem and/or exercise solving.

% Qualification: 30%.

Minimum %: To pass this part of the course the student has to obtain a grade equal or greater than 5 points (out of 10).

Training: A1,A2,A3,B2,B3,C16,D7,D8

Learning results: RA1, RA2

TEST 3: Project

Description: Development of a project to evaluate the ability of the students to work autonomously, including their critical spirit and the ability to apply the acquired knowledge to real-world problems. At the end, the students must submit a detailed project report.

Methodology to be applied: Project.

% Qualification: 40%.

Minimum %: To pass this part of the course the student has to obtain a grade equal or greater than 5 points (out of 10).

Training: A2,B2,B4,C16,D8,D9

Learning results: RA2,RA4

CRITERIA OF EVALUACION FOR EXTRAORDINARY AND END OF CAREER CALLS

The continuous and global evaluation systems described above will be used.

MINUTES QUALIFICATION PROCESS

Regardless of the evaluation system and the call, in case of failing any part of the evaluation, but the overall score is higher than 4 (out of 10), the grade in the minutes will be 4).

EVALUATION DATES

The dates of the tests corresponding to the continuous evaluation system will be published in the calendar of activities, available on the website of the ESEI <https://esei.uvigo.es/docencia/horarios/>. The official exam dates for the different calls, officially approved by the ESEI Xunta de Centro, are published on the ESEI website <https://esei.uvigo.es/docencia/exames/>.

USE OF MOBILE DEVICES

All students are reminded of the prohibition of the use of mobile devices in exercises and practices, in compliance with Article 13.2.d) of the University Student Statute, regarding the duties of university students, which establishes the duty to "Refrain from the use or cooperation in fraudulent procedures in evaluation tests, in the work performed or in official university documents."

CONSULTATION/REQUEST FOR TUTORIALS Tutorials can be consulted through the faculty member's personal page, accessible through <https://esei.uvigo.es/docencia/profesorado/>.

OTHER CONSIDERATIONS

If plagiarism is detected in any of the works (essays or project), the final grade will be "Suspenso" (0) and the situation will be notified to the School's Board to take the appropriate disciplinary actions. If translation errors cause any contradictions between the various versions of this syllabus, the English will be the prevailing version.

General description	The course introduces the basic concepts and techniques associated with natural language processing, the starting point for the design of information exploitation and dialogue environments based on human language, both at the lexical and syntactic, semantic and pragmatic levels. The objective is to introduce the student to the complexity inherent to the analysis of human natural language, mainly associated to the ambiguity and contextual dependencies it presents, and to the design of data structures and algorithms that allow its practical treatment.			

Training and Learning Results

Code	
A1	CB6 - Possess and understand knowledge that provides a basis or opportunity to be original in the development and/or application of ideas, often in a research context
A2	CB7 - Students should be able to apply their acquired knowledge and problem-solving skills in new or unfamiliar environments within broader (or multidisciplinary) contexts related to their area of study.
A5	CB10 - That students possess the learning skills that will enable them to continue studying in a manner that will be largely self-directed or autonomous.
B1	Maintain and extend sound theoretical approaches to enable the introduction and exploitation of new and advanced technologies in the field of Artificial Intelligence.
B3	Search and select useful information needed to solve complex problems, handling with fluency the bibliographic sources of the field.
B4	Elaborate adequately and with certain originality written compositions or motivated arguments, write plans, work projects, scientific articles and formulate reasonable hypotheses in the field.
C1	Understanding and mastering techniques for text processing in natural language
C2	Understanding and mastery of the fundamentals and techniques of semantic processing of linked, structured, and unstructured documents, and of the representation of their content.
C3	Understanding and knowledge of the techniques of representation and processing of knowledge through ontologies, graphs, and RDF, as well as the tools associated with them.
D2	Master the oral and written expression and comprehension of a foreign language.
D3	Utilizar las herramientas básicas de las tecnologías de la información y las comunicaciones (TIC) necesarias para el ejercicio de su profesión y para el aprendizaje a lo largo de su vida.
D7	Develop the ability to work in interdisciplinary or transdisciplinary teams to offer proposals that contribute to sustainable environmental, economic, political and social development.
D8	Value the importance of research, innovation and technological development in the socioeconomic and cultural progress of society.

	Description	Qualification	Training and Learning Results			
Laboratory practical	The delivery of the practicals must be done within the deadline established in the virtual campus and must follow the specifications indicated in the statement for both presentation and defense.	50	A1 A2 A5	B3 B4	C1 C2 C3	D2 D3 D7 D8
Objective questions exam	Compulsory realization. The mastery of the theoretical and operative knowledge of the subject will be evaluated.	50	A1 A2	B1	C1 C2 C3	D2

Other comments on the Evaluation

EVALUATION CRITERIA FOR ALL STUDENTS IN ALL OPPORTUNITIES

Students must achieve at least 40% of the maximum grade for each part (theory, practice) and in any case the sum of both parts must reach a 5 to pass the course. If any of the above requirements is not met, the grade for the course will be established according to the lowest grade obtained.

In case of not reaching the minimum grade in one of the parts, the student will have a second opportunity in which only the delivery of that part will be required.

The delivery of the practicals must be done within the deadline established in the virtual campus and must follow the specifications indicated in the statement for both its presentation and defense.

The student who submits all the compulsory practicals or attends the objective test in the official evaluation period will be

considered "Presented".

In the case of fraudulent performance of exercises or tests, the Regulations for the evaluation of students' academic performance and review of qualifications will be applied. In application of the corresponding regulations on plagiarism, the total or partial copy of any practical or theory exercise will result in failure in both opportunities of the course, with a grade of 0.0 in both cases.

EXAM DATES

The official exam dates for the different opportunities, will be published on the ESEI website: <https://esei.uvigo.es/docencia/exames/>

CONSULTATION/REQUEST OF TUTORING SESSIONS

Tutoring sessions schedules can be consulted through the faculty's personal page, available at <https://esei.uvigo.es/docencia/profesorado/>

General description	This course presents an overview of machine learning. The syllabus explains the different techniques and methods, including supervised and unsupervised learning. In the practical part, real cases will be solved.			

Training and Learning Results

Code	
A1	CB6 - Possess and understand knowledge that provides a basis or opportunity to be original in the development and/or application of ideas, often in a research context
A2	CB7 - Students should be able to apply their acquired knowledge and problem-solving skills in new or unfamiliar environments within broader (or multidisciplinary) contexts related to their area of study.
A3	CB8 - the complexity of making judgments based on information that, while incomplete or limited, includes reflections on the social and ethical responsibilities linked to the application of their knowledge and judgments.
A4	CB9 - Students should be able to communicate their conclusions and the ultimate knowledge and rationale behind them to specialized and non-specialized audiences in a clear and unambiguous manner.
B2	Successfully address all stages of an Artificial Intelligence project.
B3	Search and select useful information needed to solve complex problems, handling with fluency the bibliographic sources of the field.
B4	Elaborate adequately and with certain originality written compositions or motivated arguments, write plans, work projects, scientific articles and formulate reasonable hypotheses in the field.
B5	Work in teams, especially multidisciplinary teams, and be skilled in time management, people management and decision making.
C10	Ability to build, validate and apply a stochastic model of a real system from observed data and the critical analysis of the results obtained
C11	Understanding and mastery of the main data analysis techniques and tools, both from a statistical and machine learning point of view, including those dedicated to the processing of large volumes of data, and the ability to select the most appropriate ones for problem solving.
C12	Ability to plan, formulate and resolve all stages of a data project, including understanding and mastery of basic fundamentals and techniques for searching and filtering information in large data collections.
C15	Knowledge of computer tools in the field of machine learning, and ability to select the most appropriate for solving a problem.
D3	Utilizar las herramientas básicas de las tecnologías de la información y las comunicaciones (TIC) necesarias para el ejercicio de su profesión y para el aprendizaje a lo largo de su vida.
D4	To develop for the exercise of a citizenship respectful of democratic culture, human rights and gender perspective.
D7	Develop the ability to work in interdisciplinary or transdisciplinary teams to offer proposals that contribute to sustainable environmental, economic, political and social development.
D8	Value the importance of research, innovation and technological development in the socioeconomic and cultural progress of society.
D9	Have the ability to manage time and resources: develop plans, prioritize activities, identify critical ones, set deadlines and meet them.

Expected results from this subject

Expected results from this subject	Training and Learning Results
------------------------------------	-------------------------------

Ability to identify if a problem can be solved using a machine learning technique.	A3 B2 B3 B4 C12 D4 D7 D8 D9
Obtain the ability to choose the most appropriate learning technique for a problem depending on the nature of the data.	A1 A2 A4 B2 C11 C15 D3 D8
Ability to design and develop a learning model in a real programming environment.	A1 A2 A3 A4 B5 C10 C15 D3 D7 D9
Master the different learning models and be able to apply them to real-world problems.	A2 B2 B3 C11 C15 D3 D8
Know and understand the difference between classification and regression problems.	A1 A3 B3 C10 C11
Understand how to compare the results of the different types of machine learning.	A2 A4 C10 C12 C15 D4 D8 D9

Contents

Topic	
Supervised learning	Introduction to learning
	Artificial Neural Networks
	Support Vector Machines
	Decision trees
	Regression
	Instance-based learning
Ensemble modeling	Ensemble modeling
Preprocessing, evaluation and regularization	Preprocessing and feature extraction techniques.
	Model creation and evaluation.
	Complexity & Regularization.

Unsupervised learning	Unsupervised learning: clustering
	Unsupervised neural networks
Reinforcement learning	Markov decision processes
	Reinforcement learning

Planning

	Class hours	Hours outside the classroom	Total hours
Lecturing	21	42	63
Laboratory practical	13	24	37
Project based learning	9	19	28
Objective questions exam	2	20	22

*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies

	Description
Lecturing	Theoretical teaching of the subject matter of the course
Laboratory practical	Solve practical problems by using the different techniques that will be explained in the theory classes.
Project based learning	Writing, under the supervision of the teacher, of reports explaining the resolution of the problems carried out in the laboratory practices and the results obtained.

Personalized assistance

Methodologies	Description
Laboratory practical	Practical work carried out with the advice of the teacher.
Project based learning	Writing of the explanatory report under the teacher's supervision.

Assessment

	Description	Qualification	Training and Learning Results
Laboratory practical	Resolution of real world problems using the methodology, for which several techniques explained in theory will be used, and the student will be stimulated to generate new ideas for the resolution of these problems.	20	A1 B2 C12 D3 A2 B3 C15 D7 B5
Project based learning	Writing of the report on the resolution of the real problems carried out in the laboratory practices. The writing of the report will include a bibliographic review of the most important works related, written in English for the most part, documentation on the problem to be solved, methodology used, and comparison of the results found in the application of the different techniques, as well as a critical evaluation of both the results obtained and the information used.	30	A3 B2 D4 A4 B3 D8 B4 D9 B5
Objective questions exam	Test questions about the contents of the course, based on the different machine learning techniques and their applications.	50	A2 B3 C10 D4 C11 D8 D9

Other comments on the Evaluation

EVALUATION CRITERIA FOR ALL STUDENTS IN ALL OPPORTUNITIES

Students must achieve at least 40% of the maximum mark for each part (theory, practice) and in any case the sum of both parts must exceed 5 to pass the subject. If any of the above requirements is not met, the grade of the call will be established according to the lowest grade obtained.

In the second opportunity, the evaluation will be carried out with the same criteria, and a new term will be opened for the delivery of the practical works.

The deliveries of the practices must be made within the period established in the virtual campus and must follow the specifications indicated in the statement both for their presentation and their defense.

Students will have the condition of "Presented" if you attend the theoretical test in the official evaluation period.

In the case of fraudulent completion of exercises or tests, the Regulations for evaluating the academic performance of students and reviewing qualifications will be applied. In application of the corresponding regulations on plagiarism, the total or partial copy of any practice or theory exercise will suppose the suspense in the activity in which plagiarism has been

detected, with a grade of 0.

EXAM DATES

The official exam dates for the different opportunities, will be published on the ESEI

website: <https://esei.uvigo.es/docencia/exames/>

CONSULTATION/REQUEST OF TUTORING SESSIONS

Tutoring sessions schedules can be consulted through the faculty's personal page, available at

General description	The course introduces the student to the modeling of human language, i.e. the generation of models that allow estimating the plausibility of a text, an essential phase in the design of any application based on the exploitation of its communicative mechanisms. The student will be trained to master the theoretical principles and techniques that allow their construction, both those based on discrete representations of the elements of the language and on continuous representations. Special attention will be given to modeling in contexts of scarce linguistic resources, whether this is motivated by the treatment of novel domains of knowledge or by the exploitation of languages of limited diffusion.			

Training and Learning Results	
Code	
A1	CB6 - Possess and understand knowledge that provides a basis or opportunity to be original in the development and/or application of ideas, often in a research context

	Class hours	Hours outside the classroom	Total hours
Lecturing	10	10	20
Laboratory practical	5	15	20
Project based learning	6	28	34
Objective questions exam	1	0	1

*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies

	Description
Lecturing	Teachers present a topic to students with the aim of providing a set of information with a specific scope.

Laboratory practical	The teachers of the discipline present to the students one or more practical problems that require the comprehension and application of the theoretical and practical contents included in the syllabus of the subject. Students can work on solving problems individually or as a team. These activities may require autonomous work, although guided by the teacher of the subject.
Project based learning	Students are presented with practical projects that require an important part of their total dedication to the topic. In addition, and due to the scope of the work to be performed, it is necessary for the student to use not only management skills, but also technical skills.

Personalized assistance

Methodologies	Description
Laboratory practical	The teachers will attend the students in individualized mentoring sessions, dedicated to the orientation in the study and to the resolution of doubts on the contents, duties and activities of the discipline.
Project based learning	The teachers will attend the students in individualized mentoring sessions, dedicated to the orientation in the study and to the resolution of doubts on the contents, duties and activities of the discipline.

Assessment

Description		Qualification	Training and Learning Results			
Lecturing	Continuous monitoring of class attendance and student participation	5	A1	B1 B4	C1 C2 C3	D2 D8

Objective questions exam	Mastery of theoretical and operational knowledge of the subject will be assessed. Mandatory.	45	A1	B1 B4	C1 C2 C3	D2 D8

Other comments on the Evaluation

EVALUATION CRITERIA FOR ALL STUDENTS IN ALL OPPORTUNITIES

Students must achieve a minimum of 40% of the maximum mark of the "Laboratory Practices" and "Objective Test" parts, and in any case the sum of the three parts must be greater than 5 to pass the subject. If any of the above requirements is not met, the grade for the course will be established according to the lowest grade obtained.

In case of not reaching the minimum score in the "Laboratory Practices" or "Objective Test" parts, the student will have a second opportunity in which only the delivery of the failed part will be required.

Grades will not be saved between academic years.

The delivery of the practicals must be done within the deadline established in the virtual campus and must follow the specifications indicated in the statement for both its presentation and defense.

The student who submits all the compulsory practicals or attends the objective test in the official evaluation period will be considered "Presented".

In the case of fraudulent completion of exercises or tests, the Regulations for the evaluation of the academic performance of students and review of grades will be applied. In application of the corresponding regulations on plagiarism, the total or partial copy of any practice or theory exercise will result in suspension on both occasions of the course, with a grade of 0.0 in both cases.

EXAM DATES

The official exam dates for the different opportunities, will be published on the ESEI

website: <https://esei.uvigo.es/docencia/exames/>

General description	The course introduces the student to the modeling of systems capable of adapting to their environments and learning from their experience, imitating the evolutionary processes of nature. In this context, the student will be instructed not only in the use of different techniques for the search of solutions inspired by the prevalence or subsistence strategies of a population, but also in the application of meta-heuristics for their optimization.			

Training and Learning Results	
Code	
A1	CB6 - Possess and understand knowledge that provides a basis or opportunity to be original in the development and/or application of ideas, often in a research context
A2	CB7 - Students should be able to apply their acquired knowledge and problem-solving skills in new or unfamiliar environments within broader (or multidisciplinary) contexts related to their area of study.
A3	CB8 - the complexity of making judgments based on information that, while incomplete or limited, includes reflections on the social and ethical responsibilities linked to the application of their knowledge and judgments.
B2	Successfully address all stages of an Artificial Intelligence project.
B3	Search and select useful information needed to solve complex problems, handling with fluency the bibliographic sources of the field.
B4	Elaborate adequately and with certain originality written compositions or motivated arguments, write plans, work projects, scientific articles and formulate reasonable hypotheses in the field.
B5	Work in teams, especially multidisciplinary teams, and be skilled in time management, people management and decision making.
C10	Ability to build, validate and apply a stochastic model of a real system from observed data and the critical analysis of the results obtained
C11	Understanding and mastery of the main data analysis techniques and tools, both from a statistical and machine learning point of view, including those dedicated to the processing of large volumes of data, and the ability to select the most appropriate ones for problem solving.
C12	Ability to plan, formulate and resolve all stages of a data project, including understanding and mastery of basic fundamentals and techniques for searching and filtering information in large data collections.
C15	Knowledge of computer tools in the field of machine learning, and ability to select the most appropriate for solving a problem.
D3	Utilizar las herramientas básicas de las tecnologías de la información y las comunicaciones (TIC) necesarias para el ejercicio de su profesión y para el aprendizaje a lo largo de su vida.
D7	Develop the ability to work in interdisciplinary or transdisciplinary teams to offer proposals that contribute to sustainable environmental, economic, political and social development.
D8	Value the importance of research, innovation and technological development in the socioeconomic and cultural progress of society.
D9	Have the ability to manage time and resources: develop plans, prioritize activities, identify critical ones, set deadlines and meet them.

Topic

Introduction to algorithms of optimisation	General scheme of evolutionary algorithms. Basic concepts: search domain, constraints, penalties. No Free Lunch theorem. Basic concepts of multi-objective optimization.
Paradigms and meta-heuristic of nature-inspired algorithms	Bio-inspired metaheuristics. Swarm intelligence.
Specific algorithms of evolutionary computation	Genetic algorithms. Evolutionary strategies. Genetic programming. Examples of swarm intelligence: Particle Swarm Optimization, Artificial Bee Algorithm, Bacterial Colony Optimization, Ant Algorithms. Examples of other bio-inspired evolutionary algorithms.
Advances in the automatic adaptation of evolutionary algorithms	Automatic adaptation of the defining parameters of an evolutionary algorithm. Application of memetic algorithms (local search at individuals in population based algorithms). Use of hyper-heuristics.

Planning

Essay	2	2	4
Objective questions exam	3	0	3

*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies

	Description
Lecturing	Oral exhibition complemented with the use of audiovisual means and the introduction of some questions headed to the students, with the purpose to transmit knowledges and facilitate the learning. In addition to the time of oral exhibition by part of the professor, this formative activity requires of the student the dedication of a time to prepare and review by own account the material object of the class.
Laboratory practical	Classes devoted to that the students develop practical works that involve to tackle the resolution of complex problems, and the analysis and design of solutions that constitute a half for his resolution. This activity can require of the students the oral presentation of the works made. The works made by the students can done individually or in groups.
Case studies	Present to the students a state-of-the-art work, real or fictitious, that presents a specific topic. The students has to apply the theoretical knowledge of the subject to look for solution to the problem. Like general norm, case studies will make in groups. The distinct groups of work will present and share their solutions.

Personalized assistance

Methodologies	Description
---------------	-------------

Laboratory practical	The professor will attend the students in sessions of laboratory with the aim of orientation to the resolution of the exercises and practical works of the subject.
Case studies	The professor will attend the students in sessions of office hours dedicated to the orientation in the study and the resolution of doubts on the contents and works of the subject. Use a remote platform with capacity of forums of discussion both between the students and with the professor.
Tests	Description
Essay	The professor will attend the students in sessions of office hours dedicated to the orientation in the study and the resolution of doubts on the contents and works of the subject.

Assessment					
	Description	Qualification	Training and Learning Results		
Lecturing	Continuous evaluation: part of the evaluation of the students is based on the evolution and work in the frame of the subject and on the participation in the formative activities. (RA1, RA2, RA3, RA4, RA5)	5	A1 A2 A3	B3	D8
Laboratory practical	Continuous evaluation: part of the evaluation of the students is based on the evolution and work in the frame of the subject and on the participation in the formative activities. (RA1, RA2, RA3, RA4, RA5)	5	A1 A2 A3	B2 B4	C12 C15 D7 D8
Essay	Evaluation of practical works: evaluation of the solutions proposed by the students to the exercises. The evaluation of exercises is carried out by means of a correction by the professor, a defence of the solution done by the student in a written comment or in an oral presentation of the developed solution.	50	A1 A2 A3	B2 B3 B4 B5	C10 C11 C12 C15 D3 D7 D8 D9
Objective questions exam	Final examination: written evaluation at the end of the subject, oriented especially to evaluate the understanding of the theory and laboratory exercises. (RA1, RA2, RA3, RA4, RA5)	40	A1 A2 A3	B3 B4	C10 C11 C12 C15 D8

Other comments on the Evaluation

CONTINUOUS ASSESSMENT SYSTEM

TEST 1: Evaluation in master class

Description: Active participation in theory classes.

Methodology(s) applied(s): Objective oral questions.

% Qualification: 5%

% Minimum (if any): there is no

Assessed skills: A1, A2, A3, B3, D8

Assessed learning outcomes: RA1, RA2, RA3, RA4, RA5

TEST 2: Evaluation in laboratory practices

Description: Active participation in practical classes.

Methodology(s) applied(s): Objective oral questions.

% Qualification: 5%

% Minimum (if any): there is no

Assessed skills: A1, A2, A3, B2, B4, C12, C15, D7, D8

Assessed learning outcomes: RA1, RA2, RA3, RA4, RA5

TEST 3: Work evaluation (part 1, at the end of the first half of the academic period)

Description: Objective test that will include evaluation of the application of theoretical concepts and resolution of exercises.

Methodology(s) applied(s): Delivery of solutions developed with report.

% Qualification: 25%

% Minimum (if any): there is no

Assessed skills: A1, A2, A3, B2, B3, B4, B5, C10, C11, C12, C15, D8

Assessed learning outcomes: RA1, RA2, RA3, RA4, RA5

TEST 4: Work evaluation (part 2, at the end of the academic period)

Description: Objective test that will include evaluation of the application of theoretical concepts and resolution of exercises.

Methodology(s) applied(s): Delivery of solutions developed with report.

% Qualification: 25%

% Minimum (if any): there is no

Assessed skills: A1, A2, A3, B2, B3, B4, B5, C10, C11, C12, C15, D8

Assessed learning outcomes: RA1, RA2, RA3, RA4, RA5

TEST 5: Objective questions exam (during exam period)

Description: Objective test that will include short questions and development questions.

Methodology(s) applied(s): Written exam.

% Qualification: 40%

% Minimum (if any): there is no

Assessed skills: A1, A2, A3, B3, B4, C10, C11, C12, C15, D8

Assessed learning outcomes: RA1, RA2, RA3, RA4, RA5

All students who take any of the tests 2 and 3 are understood to accept the continuous assessment procedure described above. If a student does not appear for any of the tests, a grade of 0 will be assigned to it.

GLOBAL EVALUATION SYSTEM

Procedure for choosing the global assessment modality: It is considered that the student opts for the global assessment system if they do not take Test 1 of the continuous assessment system).

TEST 1: Theoretical, practical and/or laboratory evaluation.

Description: Objective test that will include evaluation of theoretical concepts and resolution of exercises.

Methodology(s) applied(s): Problem solving, Examination of objective questions. They must appear in the top table.

% Rating: 100%

Minimum % (if applicable): reach 50%

Assessed skills: All of the subject.

Evaluated learning outcomes: All of the subject.

EVALUATION CRITERIA FOR EXTRAORDINARY CALL AND FINAL DEGREE

The global evaluation systems previously exposed will be used.

RECORD QUALIFICATION PROCESS

The sum of the sections described above will appear in the minutes.

EVALUATION DATES

The dates of the tests corresponding to the continuous assessment system will be published in the calendar of activities, available on the ESEI website <https://esei.uvigo.es/docencia/horarios/>.

The official exam dates of the different calls, officially approved by the Xunta de Centro of the ESEI, are published on the ESEI website <https://esei.uvigo.es/docencia/exames/>.

USE OF MOBILE DEVICES

All students are reminded of the prohibition of the use of mobile devices in exercises and practices, in compliance with article 13.2.d) of the University Student Statute, regarding the duties of university students, which establishes the duty to "Refrain from using or cooperation in fraudulent procedures in the evaluation tests, in the works that are carried out or in official documents of the university."

CONSULTATION/REQUEST FOR TUTORIALS

The tutorials can be consulted through the personal page of the teaching staff, accessible through <https://esei.uvigo.es/docencia/profesorado/>

General description	The main objective of this subject is to provide students with the minimum knowledge necessary for problem solving in the field of intelligent systems in real time, and the appropriate understanding of how to approach the resolution of these problems, but paying special attention to real time management.			

Training and Learning Results

Code	
A1	CB6 - Possess and understand knowledge that provides a basis or opportunity to be original in the development and/or application of ideas, often in a research context
A2	CB7 - Students should be able to apply their acquired knowledge and problem-solving skills in new or unfamiliar environments within broader (or multidisciplinary) contexts related to their area of study.
A4	CB9 - Students should be able to communicate their conclusions and the ultimate knowledge and rationale behind them to specialized and non-specialized audiences in a clear and unambiguous manner.
A5	CB10 - That students possess the learning skills that will enable them to continue studying in a manner that will be largely self-directed or autonomous.
B1	Maintain and extend sound theoretical approaches to enable the introduction and exploitation of new and advanced technologies in the field of Artificial Intelligence.
B2	Successfully address all stages of an Artificial Intelligence project.
B5	Work in teams, especially multidisciplinary teams, and be skilled in time management, people management and decision making.
C19	Knowledge of different application areas of AI-based technologies and their capacity to offer a differentiating added value.
C20	Ability to combine and adapt different techniques, extrapolating knowledge between different fields of application.
C21	Knowledge of techniques that facilitate the organization and management of AI projects in real environments, resource management and task planning in an efficient way, taking into account concepts of knowledge dissemination and open science.
C22	Knowledge of techniques that facilitate the security of data, applications and communications and their implications in different AI application areas.
C30	Be able to pose, model and solve problems requiring the application of artificial intelligence methods, techniques and technologies.
D3	Utilizar las herramientas básicas de las tecnologías de la información y las comunicaciones (TIC) necesarias para el ejercicio de su profesión y para el aprendizaje a lo largo de su vida.
D7	Develop the ability to work in interdisciplinary or transdisciplinary teams to offer proposals that contribute to sustainable environmental, economic, political and social development.
D8	Value the importance of research, innovation and technological development in the socioeconomic and cultural progress of society.
D9	Have the ability to manage time and resources: develop plans, prioritize activities, identify critical ones, set deadlines and meet them.

Methodologies

	Description
Lecturing	Presentation by the teacher of the main contents of the subject. CONTINUOUS ASSESSMENT Mandatory character Attendance: Mandatory OVERALL ASSESSMENT Mandatory character
Laboratory practical	Presentation and supervision by the teacher of practical problems that complement the theoretical contents seen in the master classes and in the presentations. CONTINUOUS ASSESSMENT Mandatory character Attendance: Mandatory OVERALL ASSESSMENT Mandatory character
Case studies	Teacher will present to Students a work scenario, real or fictitious, that exposes a certain problem. Students must solve it and present the solution through a video of about 10' in length; the solution will be elaborated by applying the knowledge acquired along the course. CONTINUOUS ASSESSMENT Mandatory character Attendance: Mandatory OVERALL ASSESSMENT Mandatory character
Project based learning	The teacher will propose to the students a series of practical projects for their resolution using the contents seen both in theory and in the laboratory. The solution will be composed of an annotated code and a memory that adequately describes the solution provided. CONTINUOUS ASSESSMENT Mandatory character Attendance: Mandatory OVERALL ASSESSMENT Mandatory character

Personalized assistance

Methodologies	Description
---------------	-------------

Case studies	Teacher will advise the student on how to organize the contents chosen for exposure to the rest of the students. Teacher will use as support the telematic means available.
Project based learning	Teacher will advise the student on how to approach the design and organization of the solution proposed by the student to the assigned project. Teacher will use as support the telematic means available.

Assessment									
	Description	Qualification	Training and Learning Results						
Lecturing	At the end of each topic, problems/exercises will be proposed that will be used for an evaluation through continuous monitoring of the subject. It allows the evaluation of RA1, RA3, RA4, RA5 and RA6 To release this assessment test, the student must get 5 points or more in their final grade. In the case of opting for the global evaluation, on the date of the exam the students will be able to answer the exercises that are presented.	30	A1	B1	C19	C20	C21	C22	C30
Case studies	Presentation of a video with its own solution to a proposed case study. It allows the evaluation of RA1, RA3, RA4, RA5, RA6 and RA7 This methodological test is compulsory, both in continuous and global evaluation. To release this part of the evaluation, the student must get 5 points or more in their grade. Late deliveries and those that are delivered in a different format than the order will be rated 0.	30	A4	B1	C19	D8	C20	D9	C21
			A5		C22	C30			
Project based learning	The solution (code + explanatory memory) to a practical project proposed and assigned will be evaluated. It allows the evaluation of RA2, RA4, RA6, and RA7 This test will be evaluated with the applications provided to be carried out in groups of 2 people. This methodological test is compulsory, both in continuous and global evaluation. The delivery must be made on the dates and in the manner indicated. Late deliveries and those that are delivered in a different format than asked will be rated with 0. The delivery could require a defense by the members of the group on the date and in the manner indicated. To release this assessment test, the student must get 5 points or more in their final grade	40	A1	B2	C19	D3	A2	B5	C20
			A4		C21	D8	A5		C22
					C30				

Other comments on the Evaluation

CONTINUOUS ASSESSMENT SYSTEM

TEST 1: Resolution of problems and/or exercises

Description: Resolution of exercises and/or problems proposed at the end of each topic to evaluate the comprehension of the unit and carry out continuous monitoring of the subject. These exercises will be carried out and delivered offline.

Methodology(s) applied(s): Lecturing.

Qualification: 30%

Minimum: For the release of this part of the subject, the student must obtain a grade equal to or greater than 5 points (out of 10) in the final grade of the test, which will be calculated cumulatively by adding the points achieved in each installment.

TEST 2: Elaboration of Memory and Video

Description: Preparation of a video and a brief report that presents/defends the student's solution to the assigned case study. The work will be developed in pairs and delivered offline on the date to be determined.

Methodology(s) applied: Case studies

Qualification: 30%

Minimum: For the release of this part of the subject, the student must obtain a score equal to or greater than 5 points (out of 10) in the evaluation of both the memory and the video. Late deliveries and those that do not meet the parameters set for delivery will be scored with 0 points.

TEST 3: Development of a practice and a practice report

Description: After the second week, a "Project" will be proposed to be developed and solved in pairs. The solution will evolve over the weeks with the support of laboratory classes in which doubts will be solved and the feasibility of the proposed solution will be continuously verified.

Methodology(s) applied: Project Based Learning

Qualification: 40%

Minimum: For the release of this part of the subject, the student must obtain a grade equal to or greater than 5 points (out of 10) in the evaluation, both in the code and in the report. Once the delivery has been made, a defense of the work carried out may be required in order to verify its authorship.

-
- The final grade for the subject is calculated using the weighted average of the previous tests. In order to take said average, the student must achieve at least a 4 in each of the tests.
 - If, at the end of the course, a student presents a grade of less than 4, in two or more of the previous tests, his/her grade will be determined by the minimum value between the average of the grades and 4.
 - All the deliveries of the previous tests that are not carried out on time and in the requested form will be graded with a 0.

GLOBAL EVALUATION SYSTEM

Procedure for choosing the global assessment modality: Since the default assessment system is CONTINUOUS ASSESSMENT, it is considered that all enrolled students opt for said system. In case of wanting to be evaluated through the GLOBAL EVALUATION system, "Once the period of one month from the beginning of the semester has passed, a period of 5 working days will be enabled for the students enrolled in the subject to formally state their intention to benefit from the GLOBAL EVALUATION system"

TEST 1: Theory Exam

Description: Objective test that will include the evaluation of the theoretical concepts seen throughout the course and resolution of exercises/problems proposed in the Continuous Assessment System.

Applied Methodology(s): Lecture

Qualification: 50%

Minimum: For the release of this part of the subject, the student must obtain a grade equal to or greater than 5 points (out of 10).

TEST 2: Elaboration of Memory and Video

Description: Preparation of a video and a brief memory that presents/defends the student's solution to a determined case study. The work will be delivered on the date determined prior to the final exam.

Methodology(s) applied: Case study

Qualification: 10%

Minimum: For the release of this part of the subject, the student must obtain a score equal to or greater than 5 points (out of 10) in the evaluation of both the memory and the video. A late delivery or one that does not conform to the parameters set for the delivery will be qualified with 0 points.

TEST 2: Development of a practice and a practice report

Description: Delivery of a solution to a "Project" that will be proposed for students who use this system and that must be delivered on the date (prior to the exam date) and in a manner determined. The solution will consist of a code with the solution and a report that explains and defends the proposed solution.

Methodology(s) applied: Project Based Learning

Qualification: 40%

Minimum: For the release of this part of the subject, the student must obtain a grade equal to or greater than 5 points (out of 10) in the evaluation, both in the code and in the report. Once the delivery has been made, the defense of the work carried out may be required in order to verify its authorship on the examination date by answering several questions related to the assigned "Project".

- The final grade for the subject is calculated using the weighted average of the previous tests. In order to take said average, the student must achieve at least a 4 in each of the tests.
- If, at the end of the course, a student presents a grade of less than 4, in one or more of the previous tests, their grade will be determined by the minimum value between the average of the grades of said tests and four.
- All the deliveries of the previous tests that are not carried out on time and in the requested form will be graded with a 0.

EVALUATION CRITERIA FOR EXTRAORDINARY CALL AND FINAL DEGREE

The continuous and global evaluation systems described above will be used.

RECORD QUALIFICATION PROCESS

Regardless of the evaluation system and the call, if any part of the evaluation is not passed, but the overall score is greater than 4 (out of 10), the qualification in the minutes will be 4.

EVALUATION DATES

The dates of the tests corresponding to the continuous assessment system will be published in the calendar of activities, available on the ESEI website <https://esei.uvigo.es/docencia/horarios/>.

The official exam dates of the different calls, officially approved by the Xunta de Centro of the ESEI, are published on the ESEI website <https://esei.uvigo.es/docencia/horarios/>.

USE OF MOBILE DEVICES

All students are reminded of the prohibition of the use of mobile devices in exercises and practices, in compliance with article 13.2.d) of the University Student Statute, regarding the duties of university students, which establishes the duty to "Refrain from using or cooperation in fraudulent procedures in the evaluation tests, in the works that are carried out or in official documents of the university."

CONSULTATION/REQUEST FOR TUTORIALS

The tutorials can be consulted through the personal page of the teaching staff, accessible through <https://esei.uvigo.es/docencia/profesorado/>
