

## (\*)Escola de Enxeñaría Aeronáutica e do Espazo

### Presentation

The School of Aeronautic and Space Engineering (EEAE) of the University of Vigo at the Campus of Ourense offers the degrees of the University of Vigo that are related both to bachelor's and to master's level in the field of aeronautical or aerospace engineering.

More information about the Center and its degrees is found in this document or on the web page (<http://aero.uvigo.es>).

### Address

Escola de Enxeñaría Aeronáutica e do Espazo

Pavillón Manuel Martínez-Risco  
Campus universitario  
32004 Ourense

Tel.: +34 988 368 823  
Web: <http://aero.uvigo.es>

### Regulations and legislation

The information is available on the Center's web site (<http://aero.uvigo.es> in the section: School -> Regulations).

## (\*)Grao en Enxeñaría Aeroespacial

### Subjects

#### Year 1st

Code	Name	Quadmester	Total Cr.
O07G410V01101	Mathematics: Calculus I	1st	6
O07G410V01102	Mathematics: Linear algebra	1st	6
O07G410V01103	Physics: Physics I	1st	6
O07G410V01104	Computer science	1st	6
O07G410V01105	Graphic expression: Graphic expression	1st	6
O07G410V01201	Mathematics: Calculus II	2nd	6
O07G410V01202	Physics: Physics II	2nd	6
O07G410V01203	Chemistry: Chemistry	2nd	6
O07G410V01204	Business: business technology and management	2nd	6
O07G410V01205	Aerospace technology	2nd	6

## **IDENTIFYING DATA**

### **Mathematics: Calculus I**

Subject	Mathematics: Calculus I			
Code	O07G410V01101			
Study programme	(*)Grao en Enxeñaría Aeroespacial			
Descriptors	ECTS Credits 6	Choose Basic education	Year 1st	Quadmester 1st
Teaching language	Galician English			
Department				
Coordinator	Area Carracedo, Iván Carlos			
Lecturers	Area Carracedo, Iván Carlos			
E-mail	area@uvigo.es			
Web	<a href="http://area.webs.uvigo.es">http://area.webs.uvigo.es</a>			
General description	The aim of this course is that the student acquires the techniques of differential calculus both in one and several variables, and integral calculus in one variables, necessary both for other courses of the degree and for professional practice.			

## **Competencies**

### Code

- A1 That the students demonstrate to possess and understand knowledge in an area of study that is part of the general education (second level), and often found at a level that, although based on advanced textbooks, also includes some aspects that involve knowledge from the avant-garde of the field of study
- B2 Planning, documentation, project management, calculation and manufacturing in the field of aeronautical engineering (in accordance with what is established in section 5 of order CIN / 308/2009), aerospace vehicles, propulsion systems, aerospace materials, airport infrastructures, air navigation infrastructures and space management, air traffic and transport management systems.
- C1 Capability to solve mathematical problems that may arise in engineering. Aptitude to apply the knowledge about: linear algebra; geometry; differential geometry; differential and integral calculation; differential equations and partial derivatives; numerical methods; numerical algorithm; statistics and optimization.
- C32 Appropriate knowledge applied to engineering: methods of calculation and development of materials and defence systems; management of experimental techniques, equipment and measuring instruments; numerical simulation of the most significant physical-mathematical processes; inspection, quality control and fault detection techniques; their most appropriate methods and repair techniques.
- D1 Capability of analysis, organization and planification.
- D3 Capability of oral and written communication in native language
- D4 Capability of autonomous learning and information management
- D5 Capability to solve problems and draw decisions
- D6 Capability for interpersonal communication
- D8 Capability for critical and self-critical reasoning

## **Learning outcomes**

### Expected results from this subject

### Training and Learning Results

Knowledge and understanding of the main concepts and techniques of differential calculus in one and several variables as well as of integral calculus in one variable and numerical integration	A1	B2	C1	D1
			C32	D3
				D4
				D5
				D6
				D8
Capacity of applying them to other branches of Mathematics and Engineering Sciences.	A1	B2	C1	D1
			C32	D3
				D4
				D5
				D6
				D8

## **Contents**

### Topic

Functions of one real variable.

Functions of one real variable. Limits. Continuity.

Differentiability of functions of one real variable. Mean value theorems. Limited expansions and Taylor's formula. Extrema.	Differentiability of functions of one real variable. Mean value theorems. Limited expansions and Taylor's formula. Extrema.
Integration of functions of one real variable	Primitives. Definite integral. Fundamental theorem of calculus. Geometric applications. Numerical integration
Sequences and series.	Sequences and series. Convergence. Numeric series of positive terms. Convergence criteria. Power series.
Functions of several real variables.	The n-dimensional euclidean space. Functions of several real variables. Limits. Continuity. Differentiability. Expansion and Taylor's formula. Relative extrema. Constrained optimization.

### Planning

	Class hours	Hours outside the classroom	Total hours
Lecturing	18	36	54
Problem solving	14	26.6	40.6
Introductory activities	1	1.4	2.4
Autonomous problem solving	5	9.5	14.5
Laboratory practical	12	24	36
Essay questions exam	2.5	0	2.5

\*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

### Methodologies

	Description
Lecturing	The professor will present in the theoretical classes the contents of the subject. Students will have basic reference texts for tracking the subject.
Problem solving	The professor will solve problems and exercises manually and the student will have to solve similar exercises to acquire the necessary skills.
Introductory activities	Activities to make contact and gather information on the students, and to present the subject.
Autonomous problem solving	The students will have to solve exercises independently to check the acquisition of the skills.
Laboratory practical	The professor will solve problems and exercises with computer tools and the student will have to solve similar exercises to acquire the necessary skills.

### Personalized assistance

Methodologies	Description
Lecturing	The professor will personally solve the doubts of students. The doubts will be solved in-person, specially during problems and laboratory lectures and during tutorials, and also by using the remote options available for the course.
Laboratory practical	The professor will personally solve the doubts of students. The doubts will be solved in-person, specially during problems and laboratory lectures and during tutorials, and also by using the remote options available for the course.
Problem solving	The professor will personally solve the doubts of students. The doubts will be solved in-person, specially during problems and laboratory lectures and during tutorials, and also by using the remote options available for the course.

### Assessment

	Description	Qualification	Training and Learning Results					
Autonomous problem solving	Written tests and / or work to assess will be made to evaluate solving exercises and / or problems autonomously.	40	A1	B2	C1	D1	C32	D3
						D4		D5
						D6		D8
Essay questions exam	A final exam on the contents of all the course will be made.	60	A1	B2	C1	D1	C32	D3
						D4		D5
						D8		

### Other comments on the Evaluation

It is required to obtain at least 30% of the maximum of the mark of each of the blocks of the subject to pass the exam. The

final exam will last at most 3 hours if there is no break or 5 hours if there is an intermediate break (being 3 hours the maximum for each part)

The evaluation system of June-July is the same as in December-January, maintaining the grades obtained for the resolution of problems and/or exercises and class attendance and participation.

Non-attending students to classes can take an exam in both December and July that covers 100% of the final grade

The dates of the final exams are published on the website of the Escola de Enxeñaría Aeronáutica e do Espazo.

Ethical commitment:

"It is expected is that students present an adequate ethical behavior. If a not appropriate ethical behavior is detected (copying, plagiarism, non authorized use of electronic devices, etc.) the student will not meet the requirements to pass the course. In this case the overall rating in the current academic year will be suspense (0.0). If necessary, a new exam to verify the acquisition of skills and knowledge by the student(s) involved could be performed."

It is recalled the prohibition of the use of mobile devices or laptops in exercises and practices since Real Decreto 1791/2010, of December 30, approving the Statute of University Students, establishes in its article 13.2.d), concerning the duties of university students, the duty to:

*"Refrain from using or cooperating in fraudulent proceedings in the evaluation tests, in the works that are carried out or in official documents of the university".*

General description	This subject is part of Mathematics and it is taught in the first semester of the first course. The other subjects of Mathematics are: Calculus I, in the first semester of the first course and Calculus II in the second semester of the first course. Competences of linear algebra are acquired, being a part of them fundamental for the other subjects of Mathematics.			
	The subject has the character of basic training. It provides the mathematical basis to different disciplines in the field of the aeronautical engineering such as the calculation and manufacture of vehicles and numerical simulation.			
	English Friendly subject: International students may request from the teachers: a) materials and bibliographic references in English, b) tutoring sessions in English, c) exams and assessments in English.			

## **Competencies**

### **Code**

A1	That the students demonstrate to possess and understand knowledge in an area of study that is part of the general education (second level), and often found at a level that, although based on advanced textbooks, also includes some aspects that involve knowledge from the avant-garde of the field of study
B2	Planning, documentation, project management, calculation and manufacturing in the field of aeronautical engineering (in accordance with what is established in section 5 of order CIN / 308/2009), aerospace vehicles, propulsion systems, aerospace materials, airport infrastructures, air navigation infrastructures and space management, air traffic and transport management systems.
C1	Capability to solve mathematical problems that may arise in engineering. Aptitude to apply the knowledge about: linear algebra; geometry; differential geometry; differential and integral calculation; differential equations and partial derivatives; numerical methods; numerical algorithm; statistics and optimization.
C32	Appropriate knowledge applied to engineering: methods of calculation and development of materials and defence systems; management of experimental techniques, equipment and measuring instruments; numerical simulation of the most significant physical-mathematical processes; inspection, quality control and fault detection techniques; their most appropriate methods and repair techniques.
D1	Capability of analysis, organization and planification.
D3	Capability of oral and written communication in native language
D4	Capability of autonomous learning and information management
D5	Capability to solve problems and draw decisions
D6	Capability for interpersonal communication
D8	Capability for critical and self-critical reasoning

## **Learning outcomes**

### **Training and Learning Results**

Capacity to apply the main concepts, technical and numerical methods of linear algebra to other branches of mathematics and engineering.	A1	B2	C1	D1
			C32	D3
				D4
				D5
				D6
				D8

## **Contents**

### **Topic**

BLOCK I	1. Real and complex numbers. 2. Systems of linear equations.
BLOCK II	3. Vector spaces. 4. Linear transformations and matrices.
BLOCK III	5. Euclidean vector spaces. 6. Diagonalisation. Orthogonal transformations.
BLOCK IV	7. Numerical methods: resolution of systems of linear equations. Computation of eigenvalues.

### Planning

	Class hours	Hours outside the classroom	Total hours
Introductory activities	1	1	2
Lecturing	13	17	30
Problem solving	29	37	66
Autonomous problem solving	5	20	25
Essay questions exam	2	10	12
Essay questions exam	2.5	12.5	15

\*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

### Methodologies

	Description
Introductory activities	Activities directed to take contact and gather information on the students, as well as to present the subject.
Lecturing	Exposition of the contents of the subject. It will be illustrated with numerous examples and applications.
Problem solving	Approach, analysis, resolution and debate of a problem or exercise related with the subject, given to illustrate and complete the explanation of each lesson.
Autonomous problem solving	It will be proposed exercises and problems that the students have to resolve in group by using collaborative learning as a integrated methodology.

### Personalized assistance

Methodologies	Description
Introductory activities	Attention and resolution of doubts to the students in relation to the different activities of the matter.
Lecturing	Attention and resolution of doubts to the students in relation to the different activities of the matter.
Problem solving	Attention and resolution of doubts to the students in relation to the different activities of the matter.
Autonomous problem solving	Attention and resolution of doubts to the students in relation to the different activities of the matter.

  

Tests	Description
Essay questions exam	Before the realisation of the exam, attention and resolution of doubts to the students in relation to the different activities of the matter.
Essay questions exam	Before the realisation of the exam, attention and resolution of doubts to the students in relation to the different activities of the matter.

### Assessment

	Description	Qualification	Training and Learning Results				
Autonomous problem solving	Resolution of a collection of exercises where it will be employed collaborative learning.	20	A1	B2	C1	D1	C32 D3 D4 D5 D6 D8

Essay questions exam	Partial exam that takes in the corresponding contents to the master sessions and the resolution of problems of the thematic blocks I and II. It consists of two parts: *One of short questions of theoretical-practical character(20%). *Another one of problems/exercises (80%).	40	A1	B2	C1	D3 C32 D4 D5 D8
----------------------	--	----	----	----	----	-----------------------------

Length: 2 hours

Essay questions exam	Long answer tests and development Partial exam that takes in the corresponding contents to the master sessions and the resolution of problems of the thematic block III. It consists of two parts: *One of short questions of theoretical-practical character(20%). *Another one of problems/exercises (80%).	40	A1	B2	C1	D3 C32 D4 D5 D8
----------------------	---	----	----	----	----	-----------------------------

Length: 2.5 hours

### **Other comments on the Evaluation**

#### **CRITERIA OF EVALUATION FOR THE FIRST CERTIFICATED QUALIFICATION**

- If a student does not carry out any of the deliveries of exercises or does not present any of the exams, they will be assigned a qualification of 0 points.
- **Minimum requirements to pass the subject:** P1: qualification of the first partial exam (out of 10); P2: qualification of the second partial exam (out of 10); E: qualification of problems resolution (out of 10)
  - $P1, P2 \geq 2,5$
  - $(P1 + P2)/2 \geq 4$
- In case of not fulfilling the minimum requirements to pass the subject, the certificated qualification will be:

$$\min(4, (P1 + P2)/2)$$

- In case to fulfil the minimum requirements to pass the subject, the certificated qualification will be:

$$\max((P1 + P2)/2, 0.8 \times (P1 + P2)/2 + 0.2 \times E)$$

#### **CRITERIA OF EVALUATION FOR THE SECOND CERTIFICATED QUALIFICATION and non-assistant students**

##### **Proof of long answer and development:**

**Description:** Exam with two parts: one theoretical-practical and another one in which they will solve exercises. This exam will be about the contents related to the master sessions and to the resolution of problems.

**Qualification:** E: resolution of problems during the semester (out of 10); P: exam (out of 10)

The qualification of the students will be calculate by the following formula:

$$\max(P, 0.8 \times P + 0.2 \times E)$$

#### **DATES OF EVALUATION**

The calendar of exams approved officially by the Xunta de Centro of the EEA is published in the webpage <http://aero.uvigo.es/gl/docencia/exames>

### **Physics: Physics I**

Subject	Physics: Physics I			
Code	O07G410V01103			
Study programme	(*)Grao en Enxearía Aeroespacial			
Descriptors	ECTS Credits	Choose	Year	Quadmester
	6	Basic education	1st	1st
Teaching language	#EnglishFriendly Spanish			
Department				
Coordinator	Lorenzo Gonzalez, Maria de las Nieves			
Lecturers	Cabrera Crespo, Alejandro Jacobo Lorenzo Gonzalez, Maria de las Nieves			
E-mail	nlorenzo@uvigo.es			
Web	<a href="http://aero.uvigo.es/">http://aero.uvigo.es/</a>			
General description	This course will provide the fundamental basis of mechanics, in particular, classical mechanics. Mechanics is the branch of the Physics focused on the study of the behaviour of bodies at rest or moving bodies. During the course of Physics I, the basis of classical mechanics will be studied, which will be extended in the next year in the course of Classical Mechanics. Both basics of the kinematics and the dynamics will be addressed in this Physics I. The kinematics is devoted to study the movement of the bodies, without considering the causes of that movement. That is, the kinematics gives answer to the question of How does a body move?. On the other hand, the dynamics is devoted to study the causes of the movement of the bodies and its evolution. That is, the dynamics, unlike the kinematics, gives answer to the question Why is this body moving? This course is fundamental since the principles of the phenomena related with the behaviour of the bodies (at rest or moving bodies) are based on this course. English Friendly subject: International students may request from the teachers: a) materials and bibliographic references in English, b) tutoring sessions in English, c) exams and assessments in English.			

## **Competencies**

### **Code**

A1	That the students demonstrate to possess and understand knowledge in an area of study that is part of the general education (second level), and often found at a level that, although based on advanced textbooks, also includes some aspects that involve knowledge from the avant-garde of the field of study		
B2	Planning, documentation, project management, calculation and manufacturing in the field of aeronautical engineering (in accordance with what is established in section 5 of order CIN / 308/2009), aerospace vehicles, propulsion systems, aerospace materials, airport infrastructures, air navigation infrastructures and space management, air traffic and transport management systems.		
C2	Understanding and mastery of the basic concepts about the general laws of mechanics, thermodynamics, fields and waves and electromagnetism and their application to solve problems related to engineering.		
D1	Capability of analysis, organization and planification.		
D3	Capability of oral and written communication in native language		
D4	Capability of autonomous learning and information management		
D5	Capability to solve problems and draw decisions		
D6	Capabiility for interpersonal communication		
D8	Capabiility for critical and self-critical reasoning		

## **Learning outcomes**

### **Expected results from this subject**

### **Training and Learning Results**

- Knowledge, understanding of the basic principles of the Physics and his application to the analysis and to the resolution of problems of engineering	A1	D1 D3 D6 D8
- Knowledge, understanding and application of the general laws of the Classical Mechanics, with special upsetting in the relative movements, the cinematic and dynamics of the point, the theorems of the quantity of movement and of the moment kinetical, and the cinematic, static and dynamics of the rigid solid.	B2	C2 D4 D5 D6

## **Contents**

### **Topic**

1) Basic vectorial Calculus	- Vectors and scalars - Coordinate system
2) Kinematics	- Reference system, trajectories, velocity and acceleration - Rectilinear and curvilinear motion - Tangential and normal accelerations
3) Relative movement	- Translation - Rotation - Components of the acceleration
4) Newton's laws	- Force - Newton's first law □ inertia - Newton's second law □ weight - Newton's third law □ action-reaction - Linear momentum - Angular momentum - Work and energy
5) Particle system	- External and internal forces - Linear impulse. Collisions - Centre of mass. - Linear momentum, angular momentum, work and energy of a particle system
6) Rigid solids	- Concept of rig solid. Centre of mass - Moment of inertia - Translation - Rotation around a fixed axis - Rolling motion
7) Particle statics and rigid solid statics	- General equations of the equilibrium of rigid solid - System of forces - Stability
8) Fluid statics	- Density and hydrostatic pressure - Archimedes□ principle - Surface tension. Capillarity

### Planning

	Class hours	Hours outside the classroom	Total hours
Lecturing	32	64	96
Autonomous problem solving	4.5	9.5	14
Research based methodologies	0.5	3	3.5
Laboratory practical	12	0	12
Essay questions exam	2.5	0	2.5
Practices report	0	5	5
Problem and/or exercise solving	0	10	10
Presentation	1	6	7

\*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

### Methodologies

	Description
Lecturing	The theory of the course will be presented and it will be applied to solve problems
Autonomous problem solving	The student should solve exercises following some instructions.
Research based methodologies	They will program hours so that the student can resolve his doubts in relation with the matter and the works proposed
Laboratory practical	Tasks related with the contents of the course will be carried out in the laboratory. The realisation of these tasks is mandatory to pass the course

### Personalized assistance

Methodologies	Description
Laboratory practical	During the tasks in the laboratory, a personal follow-up will be carried out to guide the students to achieve the objectives
Research based methodologies	Tutoring sessions will be scheduled to solve any doubt of the students

### Assessment

	Description	Qualification	Training and Learning Results

Research based methodologies	Students will present the results of their research. The maximum marks of this part will be 10% of the final total marks. (Optional)	10	D1 D3 D4 D6
Laboratory practical	In order to pass the course, laboratory tasks should be carried out. Continuous assessment will be used during the realisation of the tasks. The maximum marks of this part will be 15% of the final total marks. (Mandatory)	15	A1 C2 D1 D4 D6 D8
Essay questions exam	There will be an exam that include questions and exercises. The maximum marks of this part will be 70% of the final total marks. However, a minimum of 5 over 10 has to be reached in the exam to pass the course. (Mandatory)	70	A1 B2 C2 D1 D3 D4 D5 D8
Problem and/or exercise solving	The maximum marks of this part will be 5% of the final total marks. (Optional)	5	C2 D3 D6

### Other comments on the Evaluation

Assessment system in July will be the same as explained before. Marks achieved in Laboratory, research based methodologies and Troubleshooting can be saved. Laboratory tasks should have been carried out in order to attend the July call.

Dates of evaluation:

the official dates can be found in

<http://aero.uvigo.es/gl/docencia/exams>

Off-site students should notify the situation to the coordinator of the course. In this case the maximum marks of the exam will be 85% of the final total marks and 15% will correspond to laboratory.

In summary:

Assessment of on-site students:

- Exam up to 70% (a minimum of 5 over 10 has to be reached in the exam to pass the course)
- Troubleshooting up to 5%
- Research based methodologies up to 10%
- Laboratory tasks up to 15% (mandatory)

Evaluation for students who do not choose a continuous assessment.

- Exam up to 85% (a minimum of 5 over 10 has to be reached in the exam to pass the course).
- Laboratory tasks up to 15% (mandatory)

VERY IMPORTANT:

A minimum of 5 over 10 has to be reached in the exam to pass the course. In the case that the mark of 5 (over 10) is not reached in the exam, the mark that will appear in the record will be the mark of that exam. The duration of the exam will be approximately 2.5 hours.

Off-site students that do not pass in DECEMBER can attend the assessment in JUNE by solving one unique exam with questions regarding all contents of the course (whenever they have done the laboratory practices)

In special cases, where for justified and previously notified reasons, the students can not attend the practices, or participate in continuous assessment. The 100% of the evaluation will correspond to a final exam in which all the competences of the course will be evaluated.

### Topic

Introduction to computing	Hardware: basic components Basic concepts of software Operating systems Collaborative tools Computer security Computer networks / big data
---------------------------	---

Conceptos de programación básicos	Types of programming languages: low and high level Variables Functions Flow control Input / Output
Advanced programming concepts	Advanced data types Exceptions Object-oriented programming
Programming being oriented to numerical models used in engineering	Mathematical libraries Parallel calculation Graphical representation

<b>Planning</b>			
	Class hours	Hours outside the classroom	Total hours
Introductory activities	0.5	0.5	1
Lecturing	22	44	66
Computer practices	22	44	66
Laboratory practice	4	4	8
Problem and/or exercise solving	2	5	7
Essay questions exam	2	0	2

\*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

<b>Methodologies</b>	
	Description
Introductory activities	Presentation of the subject: objectives, competences to be acquired by the student, contents, evaluation system. Building of work groups.
Lecturing	Presentation by the teacher of the contents of the course, theoretical bases and/or guidelines of the works, exercises or projects to be developed by the student.
Computer practices	Resolution of exercises formulated in the practical sessions, starting with the knowledge as worked in class.

<b>Personalized assistance</b>	
<b>Methodologies</b>	<b>Description</b>
Computer practices	The students will have a continuous follow-up and a personalized attention through classes dedicated to the resolution of exercises and the control of the works carried out. They may also attend, if they wish, personalized office hours.

<b>Assessment</b>			
	Description	Qualification	Training and Learning Results
Computer practices	Attendance and active participation	5	A1 C3 D3 D4 D5 D8
Laboratory practice	Development of programs and documents in which the students reflect the characteristics of their works carried out. The students should describe the tasks and procedures they developed, show the results and observations they carried out, as well as the analysis and processing of data.	65	A1 C3 D1 D3 D4 D5 D6 D8 D9
Problem and/or exercise solving	Evaluation tests that include theoretical questions or theoretical exercises to solve. The students must respond to the activity formulated and apply the theoretical and practical knowledge of the subject autonomously.	20	A1 C3 D3 D4 D5 D8
Essay questions exam	Evaluation tests that include activities and problems or practical exercises to solve. The students must respond to the activity formulated and apply the theoretical and practical knowledge of the subject autonomously.	10	A1 C3 D3 D4 D5 D8

<b>Other comments on the Evaluation</b>	
June-July evaluation:	
The evaluation system of June-July is the same as in December-January, maintaining the grades obtained for the resolution	

of problems and/or exercises and class attendance and participation.

Non-attending students to classes can take an exam in both December and July that covers 100% of the final grade.

Evaluation dates: the exam calendar is published on the web <http://aero.uvigo.es/gl/docencia/exame>.

## Recommendations

### Other comments

#### RECOMMENDATIONS

Guidelines for the study:

- Attend classes.
- Do the exercises in the practices.
- Review the bibliography and resources presented in class.

Proposals for improvement and recovery:

- Students who have problems in following the pace of learning of the subject should attend the tutorials with the teachers and extend the time dedicated to independent and autonomous learning.
-

## **IDENTIFYING DATA**

### **Graphic expression: Graphic expression**

Subject	Graphic expression: Graphic expression	Choose	Year	Quadmester
Code	O07G410V01105			
Study programme	(*)Grao en Enxeñaría Aeroespacial			
Descriptors	ECTS Credits	Choose	Year	Quadmester
	6	Basic education	1st	1st

Lecturers	Pérez Vázquez, Manuel			
E-mail	maperez@uvigo.es			
Web	<a href="http://faitic.uvigo.es">http://faitic.uvigo.es</a>			
General description	The main objective of this subject is to train students in the handling and exploitation of representation systems and techniques currently more employed by the aerospace industry, which are based on geometry, be this: metric, projective, analytical, descriptive or computational.  Knowledge of forms generation methods, its properties and management of the same in diverse engineering contexts, so much in the plane how in the 3D space, requires a proper development of the capacities for analysis, synthesis and visualization (abstraction and idealization), as well as the utilization of the graphic language.  Normalization is necessary for exhaustive definition of forms, components, objects, mechanisms or installations, in respective projects, it requires knowledge of basic rules on formats, lines, ways of representation, dimensioning, symbology or geometrical product specifications (GPS).  Training in any current graphic application that facilitate creation of 3D models, the consequent obtaining of planes, assembly of components, simulation and movement, interactiveness between different files or the parametric dimensioning, complete this approach.			

## **Competencies**

### **Code**

A1	That the students demonstrate to possess and understand knowledge in an area of study that is part of the general education (second level), and often found at a level that, although based on advanced textbooks, also includes some aspects that involve knowledge from the avant-garde of the field of study
C5	Capability for spatial vision and knowledge of graphical representation techniques, both by traditional methods of metric geometry and descriptive geometry, as well as through computer aided design applications.
D1	Capability of analysis, organization and planning.
D3	Capability of oral and written communication in native language
D4	Capability of autonomous learning and information management
D6	Capability for interpersonal communication
D8	Capability for critical and self-critical reasoning

## **Learning outcomes**

### **Expected results from this subject**

### **Training and Learning Results**

- Development of the capacity for analysis and graphic interpretation of statements, properties and situations of diverse nature posed in contexts of engineering.	A1	C5	D1
- Development of capacities for abstraction and idealization.			D3
- Knowledge of general principles for geometrical design.			D4
- Knowledge of the main tools and techniques of representation.			D6
			D8

## **Contents**

### **Topic**

#### **THEORY**

1- Introduction to Standardization	1.1-Graphic in the Engineering for data visualization, communication and objects definition. 1.2-Normalization and Graphic Language. 1.3-Organisms of Normalization. 1.4-Basic Norms to obtain planes: formats, scales, lines and sights. 1.5-General Principles of Representation. Selection of sights and cuts. Rules. 1.6-European and American Systems. Adaptation to CAD systems.
------------------------------------	---

2- Flat Curves and its applications	2.1-Conicals: traced, characteristic and applications. 2.2-Projective study of the conicals. 2.3-Rolling Curves. Applications. 2.4-Other curves: spirals, envelopes, evolutes. Applications. 2.5-Polygonal approach to flat curve. 2.6-Warped Curves. The helix. Evolution of the intrinsic trihedron
3- Fundamentals and Techniques of Representation Systems	3.1-Projective fundamentals of representation systems. Projection types. 3.2-Move from one system to another. 3.3-Pairs, ternas and quaterns. Invariants. 3.4-Projective forms. 3.5-Homology and affinity. 3.6-Diedric System: measure of angles and distances. Basic operations for bodies representation. 3.7-Axonometric System, direct and indirect. Types of axonometrie. 3.8-Bounded plane system. Applications: topography and roofs.
4- Bodies visualization and representation	4.1-Bodies representation in diverse systems . 4.2-Specific Operations to obtain sights in a determined direction, intersections and unseen parts. 4.3-Determination of true magnitudes by means of twists and plane changes.
5- Rulated surfaces and its applications	5.1-General surfaces ranking. 5.2-Rulated surfaces: developable and warped. Applications. 5.3-Curved surfaces . The sphere. 5.4-Cuadratic surfaces. Applications. 5.5-Intersections between surfaces. 5.6-Polyhedral surfaces. Types, characteristic, elements of symmetry. 5.7-Grouping of polyhedra and space compartmentation.
6- Elements and forms of dimensioning	6.1-Dimensioning. Basic elements. 6.2-General principles of dimensioning. 6.3-Reference systems. 6.4-Types of dimensioning. Criteria. 6.5-Basic normative. 6.6-Functional dimensioning 6.7-Dimensional Tolerances . Adjustments.
7- Standardized elements and sets representation	7.1-Representation of normalized components. Elements of union. Elements of transmission. Others. 7.2-Drawings of assembly. Characteristics. 7.3-Dimensioning of set drawings 7.4-List of pieces. 7.5-3D assembly in the computer, establishment of relations between components, animations, movement studies and simulations.
8- Bases of symbology and schematic representations in Engineering	12.1-Symbology in Engineering. Iconicity. 12.2-Schematic representations. 12.3-Applications. 12.4-Norms.
<b>PRACTICES.</b>	
1- Computer aided design (CAD)	Program presentation by the teacher, the first day. Description of the main characteristics and possibilities of the tool. Exercises guided to the training and familiarization, with commands and fundamental functions. Direct generation of 3D models from which we will derive the views and necessary cuts for normalized definition 2D. Finally it make the assembly of components with the appropriate restrictions that allow the animation and simulation. Along the course it will be used the distinct types of dimensions (conductives, conducted and dependents of a mathematical equation or of a parameter) .
2- Common practices	It will begin with a review of the geometrical basic constructions, handmade, that necessarily requires work at home. Each theoretical part will be supplemented with exercises to realize during the hours of practice, in the successive weeks, that students must to complete at home. In parallel they will realize the training in the application and will go resolving exercises in the computer in order to acquire capacity to elaborate the final work with the computer.
3- Practical work (TrP)	It proposes the realization of a practical work (TrP) to develop during the course, in groups of 1-3 students, by way of a small project related with the career (display, assembly or group of components that exert any function related with the aeroespacial thematic), in respect at the graphic part. The complexity varies accordance with the election of each group.

<b>Planning</b>	Class hours	Hours outside the classroom	Total hours
Lecturing	26	52	78
Mentored work	0	2	2
Seminars	0	2	2
Autonomous practices through ICT	0	4	4
Introductory activities	0	1	1
Computer practices	24	36	60
Problem and/or exercise solving	2	0	2
Essay questions exam	1	0	1

\*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

<b>Methodologies</b>	Description
Lecturing	Magistral session active in which each thematic unit will be presented by the professor and complemented with the comments of the students, based in the general bibliography that facilitates and in another specific that will be able to add for each particular subject.
Mentored work	With follow-up of the professor in the selection and in the development.
Seminars	For the orientation of the work, the integration in the groups and the resolution of doubts.
Autonomous practices through ICT	For the resolution of complementary exercises out of the class
Introductory activities	Presentation of the matter in the date established by the Centre. Appearances to review and freshen on fundamental concepts and basic geometrical constructions
Computer practices	In the practical sessions will propose exercises to resolve of individual or collective way, to the hand and/or with computer, oriented to the application of the theory and to reach skill so much in the utilisation of the traditional tools as automated.

<b>Personalized assistance</b>	
<b>Methodologies</b>	<b>Description</b>
Mentored work	Practical work election by the group of students, guided by the professor, with continuous follow-up in the practical classes and tutorials.

	Description	Qualification	Training and Learning Results
Lecturing	Proof of evaluation or common Exam, to realize in the date established by the centre, of theory and practical, about the contents treaties in classes sessions.	60	A1 C5 D1 D3 D4 D6 D8
Mentored work	With tracking of the professor. He values the assistance and participation.	10	D4 D6 D8
Autonomous practices through ICT	Resolution of exercises of autonomous form, that supplement the class.	10	C5 D1 D4 D8
Computer practices	Evaluation of the practices realized weekly.	20	A1 C5 D1 D4 D6

<b>Other comments on the Evaluation</b>
---

Continuous evaluation will include all the work developed in class or home, individually or in a group. The subject can be approved by continuous evaluation when he reaches 5.00 points in each part. In case of not reaching 5.00 in each part, the question can also be overcome if in each of the parts exceeds 4.5 and the average is equal to or greater than 5.00. In case of not following the continuous assessment process, the student will only be able to take the final exam of the subject. In this case, the grade will be the one obtained in the exam.

For the July evaluation, the ratings of the previously approved parties are maintained, and those that were unsuccessful must be recovered and presented to those approved to improve the final grade. Evaluation dates: according to the exam calendar officially approved by the School Board, which is published on its website: <http://aero.uvigo.es/gl/docencia/exams>. The practical part, if it were the case, could require some type of exam outside of these dates.

Ethical commitment: the student is expected to show appropriate ethical behavior. In case of detecting inappropriate ethical behavior (copying, plagiarism, use of unauthorized electronic devices and others), it will be considered that the student does not meet the necessary requirements to solve the problem. In this case, the general grade of this academic year will be suspended (0.0). If necessary, a new test could be carried out to verify the acquisition of skills and knowledge on the part of the student involved.

## **IDENTIFYING DATA**

### **Mathematics: Calculus II**

Subject	Mathematics: Calculus II			
Code	O07G410V01201			
Study programme	(*)Grao en Enxeñaría Aeroespacial			
Descriptors	ECTS Credits	Choose	Year	Quadmester
	6	Basic education	1st	2nd
Teaching language	#EnglishFriendly Spanish Galician			
Department				
Coordinator	Cid Iglesias, María Begoña			
Lecturers	Cid Iglesias, María Begoña			
E-mail	bego@uvigo.es			
Web				
General description	The objective of the subject is that the students know and dominate the basic techniques of the integral calculus, vector calculus, ordinary differential equations and their applications, necessary both for other subjects of the qualifications and the professional exercise.			
	English Friendly subject: International students may request from the teachers: a) materials and bibliographic references in English, b) tutoring sessions in English, c) exams and assessments in English.			

## **Competencies**

### **Code**

A1	That the students demonstrate to possess and understand knowledge in an area of study that is part of the general education (second level), and often found at a level that, although based on advanced textbooks, also includes some aspects that involve knowledge from the avant-garde of the field of study
B2	Planning, documentation, project management, calculation and manufacturing in the field of aeronautical engineering (in accordance with what is established in section 5 of order CIN / 308/2009), aerospace vehicles, propulsion systems, aerospace materials, airport infrastructures, air navigation infrastructures and space management, air traffic and transport management systems.
C1	Capability to solve mathematical problems that may arise in engineering. Aptitude to apply the knowledge about: linear algebra; geometry; differential geometry; differential and integral calculation; differential equations and partial derivatives; numerical methods; numerical algorithm; statistics and optimization.
C32	Appropriate knowledge applied to engineering: methods of calculation and development of materials and defence systems; management of experimental techniques, equipment and measuring instruments; numerical simulation of the most significant physical-mathematical processes; inspection, quality control and fault detection techniques; their most appropriate methods and repair techniques.
D1	Capability of analysis, organization and planification.
D3	Capability of oral and written communication in native language
D4	Capability of autonomous learning and information management
D5	Capability to solve problems and draw decisions
D6	Capabiility for interpersonal communication
D8	Capabiility for critical and self-critical reasoning

## **Learning outcomes**

### **Expected results from this subject**

### **Training and Learning Results**

Knowledge and understanding of the main concepts and techniques of the integral calculus in several variables.	A1	B2	C1	D1
			C32	D3
				D4
				D5
				D6
				D8
Knowledge and understanding of the models that adopt the form of ordinary differential equations and the main elementary techniques of integration.	A1	B2	C1	D1
			C32	D3
				D4
				D5
				D6
				D8

Knowledge, understanding and application of the numerical methods of resolution of the models and typical problems of the aerospace technology; in concrete, polynomial interpolation, numerical differentiation and the resolution of ordinary differential equations.	A1	B2	C1	D1
			C32	D3
				D4
				D5
				D6
				D8

## Contents

### Topic

Multiple integrals. Fubini's theorem. Change of variable.	Multiple integrals. Fubini's theorem. Change of variable.
Line and surface integrals.	Line and surface integrals.
Gauss' and Stokes' theorems	Gauss' and Stokes' theorems
Introduction to the ordinary differential equations. Existence and uniqueness.	Introduction to the ordinary differential equations. Existence and uniqueness.
Linear systems and systems with constant coefficients.	Linear systems and systems with constant coefficients.
Numerical resolution of ordinary differential equations.	Numerical resolution of ordinary differential equations.
Polynomial interpolation.	Polynomial interpolation.

## Planning

	Class hours	Hours outside the classroom	Total hours
Introductory activities	1	1	2
Lecturing	28	56	84
Problem solving	15	15	30
Autonomous problem solving	0	13.5	13.5
Computer practices	6	12	18
Essay questions exam	2.5	0	2.5

\*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

## Methodologies

	Description
Introductory activities	Activities to make contact and gather information on the students, and to present the subject.
Lecturing	The professor will present in the theoretical classes the contents of the subject. Students will have basic reference texts for tracking the subject.
Problem solving	The professor will solve problems and exercises manually and the student will have to solve similar exercises to acquire the necessary skills.
Autonomous problem solving	The students will have to solve exercises independently to check the acquisition of the skills.
Computer practices	The professor will solve problems and exercises with computer tools and the student will have to solve similar exercises to acquire the necessary skills.

## Personalized assistance

Methodologies	Description
Lecturing	The professor will personally solve the doubts of students. The doubts will be solved in-person, specially during problems and laboratory lectures and during tutorials, and also by using the remote options available for the course.
Problem solving	The professor will personally solve the doubts of students. The doubts will be solved in-person, specially during problems and laboratory lectures and during tutorials, and also by using the remote options available for the course.
Autonomous problem solving	The professor will personally solve the doubts of students. The doubts will be solved in-person, specially during problems and laboratory lectures and during tutorials, and also by using the remote options available for the course.

## Assessment

	Description	Qualification	Training and Learning Results

Autonomous problem solving	Written tests and / or work to assess will be made to evaluate solving exercises and / or problems autonomously. RA1, RA2, RA3	40	A1	B2	C1 C32	D1 D3 D4 D5 D6 D8
Essay questions exam	A final exam on the contents of all the course will be made. RA1, RA2	60	A1	B2	C1 C32	D1 D3 D4 D5 D6 D8

### Other comments on the Evaluation

In any call it is necessary to obtain 5 points to pass the subject. The exam will be scored over 10 points. Since the subject has two different parts, it will be necessary to have a minimum of 2 points out of 5 in each part. In the case of obtaining a grade lower than 2 points in any of the parts, the final grade that will appear in the record will be the sum of both notes limiting it to a maximum of 4.8 points. (\*)

The maximum duration of any exam will be 3 hours. **June-July evaluation (assistants):**

**Carrying out an exam in which the learning results will be evaluated and the competences indicated in the teaching guide will be obtained. This exam will provide 100% of the rating of this call. The criterion indicated in (\*) will also apply.** **Evaluation procedure for non-assistants (December-January and June-July):**

**Carrying out an exam in which the learning results will be evaluated and the competences indicated in the teaching guide will be obtained. This exam will provide 100% of the rating of this call. The criterion indicated in (\*) will also apply.** **Dates evaluation:**

**The dates of realization of the final examinations are published in the page web of the School of Aeronautical Engineering and of the Space.**

#### Ethical commitment:

**It is expected that the students present a suitable ethical behaviour. In case to detect an ethical behaviour no suitable (copy, plagiarism, utilisation of electronic devices non authorised, and others) will consider that the student does not gather the necessary requirements to surpass the subject. In this case the global qualification in the present academic course will be of suspense (0.0). In the case to be necessary, it will be able to realise a new exam to verify the acquisition of competencies and knowledges by part of the students involved.**

It remembers the prohibition of the use of mobile devices or portable computers in exercises and practical since the Royal decree 1791/2010, of 30 December, by which approves the Statute of the University Student, establishes in his article 13.2.d), relative to the duties of the university students, the duty of :

*"Abstain of the utilisation or cooperation in fraudulent procedures in the proofs of evaluation, in the works that realise or in official documents of the university".*

## **Learning outcomes**

Expected results from this subject	Training and Learning Results
Knowledge and understanding of the basic principles of Physics and their application to the analysis and to the resolution of problems in engineering	A1    B2    C2    D1 D3 D4 D5 D6 D8
Knowledge, understanding and application of the principles of electromagnetism, including electrostatics, magnetostatics and Maxwell's equations.	A1    C2    D5 D8

## **Contents**

### Topic

Presentation of the course and historical introduction	Historical introduction.
Scalar and vectorial fields	Coordinate systems in two and three dimensions. Vectorial operators. Gradient of a scalar. Circulation of a vector. Flux. Divergence. Divergence theorem. Rotational. Stokes theorem.
Electrostatics	Charge and charge density. Coulomb's law. Electrostatic field. Flux of the electrostatic field. Gauss' law. Electrostatic potential. Poisson and Laplace equations. Energy of the electrostatic field. Potential multipolar expansion. Dipoles. Conductors and dielectrics. Electrostatics in presence of matter. Capacitors.

Electrical current and magnetostatics	Current and current density. Continuity equation. Ohm's law. Conductivity and resistivity. Introduction to the magnetic field. Force between currents. Magnetic induction. Lorentz' force. Biot and Savart's law. Magnetic flux. Ampère's law. Vector potential. Multipolar vector-potential expansion. Magnetic dipoles. Magnetism in presence of matter. Magnetic response of materials. Magnetic field. Hysteresis.
Electrical circuits	Association of resistors. Electromotive force. Dynamos. Electrical circuit. Power and energy. Voltage and current sources. Voltage, current and resistance measurement. Kirchhoff's laws and circuit analysis. Superposición, Thévenin and Norton theorems.
Introduction to electrodynamics	Faraday's induction law. Inductance. Dynamos, engines and transformers. Magnetic energy. Maxwell's displacement current. Maxwell's equations. Systems of units.
Introduction to the waves	One-dimensional waves. Harmonic waves. Phase velocity. Complex notation. Three-dimensional waves. Plane, spherical and cylindrical waves. Energy carried by a wave. Huygens' principle. Superposition of waves of different frequency. Group velocity.
Electromagnetic waves	Wave equation for electromagnetic waves. Hertz' experiment. Electromagnetic spectrum. Propagation of electromagnetic waves. Electromagnetic energy. Poynting's vector. Radiometric units. Polarisation. Reflection and refraction. Interference and diffraction.
Radiation-matter interaction	Types of interaction. Dipolar radiation. Model of electronic oscillator. Rayleigh scattering. Dispersion in dielectrics: Lorentz model. Dispersion in metals: Drude model.
Laboratory	Measurement of basic electromagnetic properties with multimeter and oscilloscope. Measurement of the capacity of a capacitor. Laplace's law. Helmholtz coils. Terrestrial magnetic field measurement. Magnetic momentum. Electromagnetic induction. Electrical circuits.

### Planning

	Class hours	Hours outside the classroom	Total hours
Lecturing	20	40	60
Laboratory practical	12	18	30
Problem solving	7	10.5	17.5
Introductory activities	1	0	1
Seminars	10	15	25
Essay questions exam	2.5	0	2.5
Practices report	0	14	14

\*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

### Methodologies

	Description
Lecturing	Classes one hour long to exposed the main theoretical concepts of the matter.
Laboratory practical	Development of experiments in laboratory to illustrate the main theoretical concepts previously developed on the lectures.
Problem solving	Resolution of selected exercises similar to those the student will face later in an autonomous way.
Introductory activities	Presentation of the subject and lecturers. Presentation of the laboratory.
Seminars	Approach, discussion and resolution of questions and problems in relation with the theoretical concepts previously developed in lectures.

### Personalized assistance

Methodologies	Description
Laboratory practical	The lecturer individually explains the development of the experiments to be carried out at the laboratory.
Lecturing	The lecturer individually supervises the correct assimilation of the theoretical concepts developed in the lectures.
Seminars	The lecturer individually supervises resolution of the problems proposed in the seminar lectures.
Introductory activities	Presentation of the subjects at the beginning of the course.
Problem solving	The lecturer solves problems of similar difficulty to those the student will face later in an autonomous way.

### Assessment

Description		Qualification Training and Learning Results			
		80	A1	C2	D1 D3 D8
Essay questions exam	Two partial examinations: problem solving and questions (10% each one). A final exam (60%). In case the student does not attend the partial exams, the final exam will suppose 80% of the total mark.				
Practices report	Inform and (if necessary) oral presentation about the activities realized at the laboratory. The students that do not attend the laboratory will be specifically evaluated about this topic together with the final examination.	20	B2	C2	D1 D3 D4 D5 D6 D8

### Other comments on the Evaluation

The marks of the partial examinations and laboratory report will be maintained in June/July.

In case the student does not attend the partial examinations, the final examination will rank 80% of the mark and the students not attending the laboratory sessions will be evaluated about such topics on the day of the final exam.

Evaluation dates: the examinations calendar is published at the website: <http://aero.uvigo.es/gl/docencia/exams>

TEMA 12. EQUILIBRIO REDOX	12.1 Conceptos básicos de oxidación e redución 12.2 Reacciónes redox: axuste en medio ácido ou básico 12.3 Valoracións redox
TEMA 13. ELECTROQUÍMICA	13.1 Celas electroquímicas: conceptos básicos 13.2 Potenciais estándar de electrodo e de cela 13.3 Termodinámica das reacciónes electroquímicas 13.4 Ecuación de Nerst. Aplicacións 13.5 Baterías e pilas 13.6 Procesos industriais de electrólisis 13.7 Corrosión
TEMA 14. CINÉTICA QUÍMICA	14.1 Conceptos básicos 14.2 Factores que modifican a velocidade dunha reacción 14.3 Determinación da ecuación cinética dunha reacción
TEMA 15. INTRODUCCIÓN Á QUÍMICA ORGÁNICA	15.1 Estrutura dos compostos orgánicos 15.2 Alcanos, alquenos, alquinos e derivados haloxenados dos hidrocarburos 15.3 Hidrocarburos aromáticos 15.4 Alcoholes, fenoles e éteres 15.5 Aldehídos e cetonas 15.6 Ácidos carboxílicos, ésteres e derivados 15.7 Aminas e amidas 15.8 Nitrilos e nitroderivados 15.9 Reacciónes dos compostos orgánicos 15.10 A química orgánica na industria aeroespacial

#### Planificación

Class hours	Hours outside the classroom	Total hours

Lección maxistral	22	44	66
Seminario	16	31.9	47.9
Prácticas de laboratorio	12	21.6	33.6

\*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

### Metodoloxía docente

	Description
Lección maxistral	Expoñeranse os fundamentos teóricos e prácticos de cada un dos temas da materia, co apoio da bibliografía e materiais audiovisuais. Estimularase a participación do alumnado.
Seminario	De xeito paralelo ás sesións maxistrais, nos seminarios abordaranse exercicios relacionados coa materia. O alumno dispoñerá previamente de boletins que inclúan todos os exercicios da materia. Contémplase a posibilidade de que os alumnos resolván de modo autónomo unha parte dos mesmos
Prácticas de laboratorio	Os alumnos realizarán prácticas relacionadas cos contidos da asignatura, onde se aplicarán as destrezas e competencias adquiridos na mesma

### Atención personalizada

Methodologies	Description
Seminario	Estimularase a participación en clase, de xeito que os alumnos poidan propoñer cuestiós para discusión adicional ou resolver exercicios de aplicación ante os seus propios compañeiros
Lección maxistral	Procurarase involucrar aos alumnos nas explicacións, dirixíndolles preguntas e permitíndolles suscitar dúbidas, que eventualmente poderían resultar en temas de discusión que os propios alumnos poderían expoñer en clase trala adecuada preparación
Prácticas de laboratorio	Os alumnos contarán con asesoramiento individual para axudarlos no manexo de instrumentos, identificación de problemas de operación, obtención de datos representativos e análise de erros

### Avaliación

	Description	Qualification	Training and Learning Results
Lección maxistral	Avaliaranse as capacidades dos alumnos relacionadas cos contidos teóricos da asignatura e cos aspectos que derivan deles a través das partes teóricas e aplicadas dos exames parcial e final. A participación na cualificación final está medida pola importancia do tempo dedicada aos aspectos teóricos e aplicados na docencia de aula. Contémplase a posibilidade de adicar ata un máximo dun 5% da cualificación a premiar un traballo autónomo excelente. En todo caso, o conxunto de cualificacións adicionais por traballo autónomo en sesións magistrais, seminarios e prácticas de laboratorio só será otorgable aos alumnos que superen os exames.	55	A1 C4 D1 D4 D5
Seminario	Os exercicios e os problemas da asignatura que se resolvieron nos seminarios ou de xeito autónomo servirán de base para avaliar o cumprimento dos obxectivos nas partes prácticas dos exames parcial e final. A participación na cualificación final está medida pola importancia do tempo adicado aos aspectos prácticos na docencia de aula. Contémplase a posibilidade de outorgar cualificación adicional ata un máximo dun 5% para premiar traballo autónomo excelente. En todo caso, o conxunto de cualificacións adicionais por achegas individuais en sesións magistrais, seminarios e prácticas de laboratorio só será outorgable aos alumnos que superen os exames.	40	A1 C4 D1 D3 D4 D5
Prácticas de laboratorio	Realizar as práctica con resultado apto. Contémplase a posibilidade de outorgar calificación adicional para premiar traballo autónomo excelente que resulte en achegas relevantes para o traballo de laboratorio. En todo caso, o conxunto de cualificacións adicionais por traballo autónomo en sesións magistrais, seminarios e prácticas de laboratorio só será outorgable ós alumnos que superen os exames, e non poderá superar o 10% da cualificación final.	5	C4 D1 D4 D5 D6 D13

### Other comments on the Evaluation

Os exercicios e os problemas da asignatura que se resolvieron nos seminarios ou de forma autónoma servirán de base para avaliar o cumprimento dos obxectivos nas partes prácticas dos exames parcial e final. A participación na cualificación final está medida pola importancia do tempo dedicada aos aspectos prácticos na docencia de aula. Avaliaranse vía exame as capacidades dos alumnos relacionadas cos contidos teóricos (55%) da asignatura e cos aspectos que derivan deles a través das partes teóricas e aplicadas (40%). Prevese a posibilidade de realizar un exame parcial, de carácter voluntario, que tería como único obxectivo evitar que a parte aprobada no parcial formase parte dos contidos do exame final. A participación na cualificación final está medida pola importancia do tempo dedicada aos aspectos teóricos e aplicados na docencia de aula. O exame final terá unha duración máxima estimada de 4 horas en total, con un descanso intermedio.

A avaliación realizarase sobre os seguintes principios:

a) Clases prácticas.

a.1) Alumnos con ensino presencial: teñen a obriga de realizar as prácticas da asignatura dun modo que o profesor xulgue como satisfactorio. Aqueles alumnos que realicen o traballo de laboratorio dunha forma que o profesor non xulgue satisfactoria deberán presentarse a un exame específico de prácticas, nas mesmas condicións que os alumnos non presenciais (véxase máis abaixo). Superar as prácticas é un requisito imprescindible para aprobar a asignatura. Os alumnos con ensino presencial que mostren un desempeño excepcional en prácticas poderán ver aumentada a súa cualificación final na asignatura (coas limitacións especificadas con anterioridade).

a.2) Alumnos con ensino non presencial: deberán comunicar ó profesor que non cursarán ensino presencial coa maior prontitude, tras o cal convocárselles para realizar un exame de prácticas sobre os fundamentos e obxectivos destas. O exame será o mesmo que terán que realizar os alumnos con ensino presencial para os que o traballo no laboratorio non sexa considerado satisfactorio. Aprobar o exame de prácticas é condición necesaria para superar a asignatura.

b) Exames escritos. Realizarase un exame final de 4 horas de duración estimada, con un descanso intermedio, que poderá incluír cuestións teóricas e/ou aplicadas relativas á materia impartida, en forma de test ou de preguntas curtas, así como exercicios e/ou problemas e/ou cuestións prácticas. O exame final constará de dous partes (parte A e parte B da asignatura). A parte A comprenderá os oito primeiros temas, e a parte B é resto do temario. En términos xerais, aprobar a asignatura requirirá aprobar tanto a parte A como a parte B. No seu caso, podería considerarse compensar unha parte suspensa con nota próxima a 5 (A ou B) con outra aprobada (B ou A), sendo requisitos imprescindibles que deben cumplirse simultáneamente: a) que a media das dúas cualificacións sexa maior de 5, e b) que a cualificación más baixa sexa igual ou maior a 4. Prevese a posibilidade de realizar un exame parcial da parte A, de xeito dos alumnos que o aproben poidan (si o desexan) realizar o exame final só da parte B.

c) Primeira e segunda edicións. Se o alumno o desexa, na segunda edición pode manter as cualificacións de prácticas e/ou da parte A da asignatura e/ou da parte B da asignatura. Se na segunda edición o alumno desexa manter a cualificación dalgunha(s) parte(s) da materia, deberá advertilo ao profesor antes de realizar o exame. Neste caso, a posibilidade de manter algunha cualificación debe ser autorizada expresamente polos docentes da asignatura.

d) Outros aspectos da avaliação. Como aspectos complementarios ó citado anteriormente, os alumnos que alcancen a suficiencia vía exame poderán obter cualificacións adicionais, ata un 10% na súa suma, coas condicións e limitacións mencionadas más arriba.

e) Datas chave. O calendario de probas de avaliação aprobado oficialmente atópase publicado na páxina web <http://aero.uvigo.es/gl/docencia/exames>; e as datas asignadas para a realización de prácticas de laboratorio para o conxunto de grupos son como segue: 11, 12, 13, 25, 26 e 27 de marzo; 1, 2 e 3 de abril.

f) Outras consideracións. Calquera comportamento non ético (copia ou intento de copia, utilización de recursos non permitidos, etc.) terá un efecto na cualificación da asignatura proporcional á súa gravidade.

## Recomendacións

### Subjects that are recommended to be taken simultaneously

Física: Física II/O07G410V01202

Matemáticas: Cálculo II/O07G410V01201

### Subjects that it is recommended to have taken before

**Other comments**

Os alumnos que cursaron a Química de segundo de Bacharelato teñen unha formación moito más adecuada que os que non o fixeron. Por tanto, estes últimos deberán realizar un esforzo adicional para porse ao nivel dos primeiros.

---

## Other comments on the Evaluation

A planificación da materia supón a aplicación dun sistema de avaliación continua (asistencia mínima do 80%). Polo que a cualificación final obterase da avaliación dos traballos de aula e realización dun exame final. Para ter en conta ditas cualificacións é necesario obter unha nota mínima de 4 sobre 10 no exame final. As datas e horarios das probas de avaliación das diferentes convocatorias son as especificadas no calendario de probas de avaliación aprobado pola xunta de centro para o curso 2019-2020. En caso de conflito ou disparidade entre as datas dos exames, prevalecerán as sinaladas na páxina web da titulación. Segunda convocatoria: a nota correspondente aos traballos de aula conservarase durante un curso académico, convocatorias de xuño e xullo. O estudiantado non asistente pode participar nun exame final que cobre todo o contido da materia.

Vehículos aeroespaciais	- Clasificación de vehículos aeroespaciais - Aerostatos e aerodinos - Vehículos espaciais - Aeronaves de á rotativa
Arquitectura do avión	- Partes do avión - Materiais - Procesos de fabricación

Aerodinámica de perfís	<ul style="list-style-type: none"> <li>- Orixe das cargas aerodinámicas</li> <li>- Perfís aerodinámicos</li> <li>- Curvas características</li> <li>- Entrada en perda de perfís</li> <li>- Perfís en réxime compresible</li> </ul>
Actuacións do avión	<ul style="list-style-type: none"> <li>- Forzas externas sobre o avión</li> <li>- Voo horizontal, rectilíneo e uniforme</li> <li>- Ascenso, descenso e planeo</li> <li>- Viraxe no plano vertical</li> <li>- Viraxe no plano horizontal</li> <li>- Actuacións en pista</li> <li>- Alcance</li> <li>- Autonomía</li> </ul>
Sistemas de propulsión	<ul style="list-style-type: none"> <li>- Introducción á propulsión</li> <li>- Propulsión a hélice</li> <li>- Propulsión a chorro</li> </ul>
Instrumentos das aeronaves	<ul style="list-style-type: none"> <li>- Instrumentos de voo e navegación</li> <li>- Instrumentos da planta propulsora</li> <li>- Agrupamento dos instrumentos</li> </ul>

### Planificación

	Class hours	Hours outside the classroom	Total hours
Actividades introductorias	1	0	1
Lección maxstral	26	52	78
Design Thinking	6	24	30
Resolución de problemas	12	16	28
Exame de preguntas obxectivas	1	0	1
Exame de preguntas obxectivas	1	0	1
Resolución de problemas e/ou exercicios	2	0	2
Resolución de problemas e/ou exercicios	2	0	2
Exame de preguntas de desenvolvemento	2	0	2
Proxecto	5	0	5

\*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

### Metodoloxía docente

	Description
Actividades introductorias	Actividades encamiñadas a tomar contacto e reunir información sobre o alumnado, así como a presentar a materia.
Lección maxstral	O profesor exporá nas clases teóricas os contidos da materia. O alumnado terá textos básicos de referencia para o seguimento da materia.
Design Thinking	O profesor presentará un tema sobre o que se levará a cabo un proxecto de industrialización do sector aeroespacial. O traballo desenvolverase en equipos / grupos de alumnos. O obxectivo desta actividade é a resolución de problemas complexos baseados na lóxica, a imaxinación, a intuición e o razoamento sistémico de cada alumno
Resolución de problemas	O profesor resolverá problemas e exercicios tipo de forma manual e o alumnado terá que resolver exercicios similares para adquirir as capacidades necesarias.

### Atención personalizada

Methodologies	Description
Lección maxstral	O profesor atenderá persoalmente as dúbidas e consultas do alumnado. Atenderanse dúbidas en forma presencial, en especial nas clases de problemas e laboratorio e en titorías, como de forma non presencial, polos sistemas telemáticos dispoñibles para a materia.
Resolución de problemas	O profesor atenderá persoalmente as dúbidas e consultas do alumnado. Atenderanse dúbidas en forma presencial, en especial nas clases de problemas e laboratorio e en titorías, como de forma non presencial, polos sistemas telemáticos dispoñibles para a materia.

### Avaliación

	Description	Qualification Training and Learning Results

Resolución de problemas e/ou exercicios	Realizaranxe probas escritas curtas para avaliar a adquisición de coñecemento de forma autónoma.	20	A1	B1	C9	D1
				B2	C10	D4
				B3	C13	D8
				B4	C17	
				B6	C18	
				B7	C19	
				B8		
Resolución de problemas e/ou exercicios	Realizaranxe probas escritas e/ou traballos para avaliar a resolución de exercicios e/ou problemas de forma autónoma así como a asistencia e participación activa.	30	A1	B1	C9	D1
				B2	C10	D2
				B3	C13	D3
				B4	C17	D4
				B6	C18	D6
				B7	C19	D8
				B8	D9	
					D12	
					D13	
Exame de preguntas de desenvolvemento	Realizarase un exame final sobre os contidos da totalidade da materia.	50	A1	B1	C9	D1
				B2	C10	D3
				B3	C13	D4
				B4	C17	D8
				B6	C18	D13
				B7	C19	
				B8		

### Other comments on the Evaluation

Estudantes non-asistentes ás clases presencias poden realizar un exame tanto en maio como en xuño/xullo que cubre 100% da nota final.
