Universida_{de}Vigo

Educational guide 2024 / 2025

Presentation

The studies of Chemistry have a large tradition at the University of Vigo, where it has been taught during more than 30 years. The stablisment of the Universitary System of Galicia in the 90s and the current process of implantation of the European Space of Higher Education (EEES) modified the offer of degrees, but no the pioneering spirit of the chemists in research of in the quest for a better service to the society.

×××

Degrees given in the Faculty

Degree in Chemistry

- Masters And Doctorates:
 - Industry and Chemical Research and Industrial Chemistry
 - $\circ~$ Theoretical chemistry and Computational Modelling
- Master:
 - Science and Technology of Conservation of Fishing Products

General description	The subject of Biology has the aim of preparing the stuc function of the organisms. Including how they are const			
	cellular, and population levels. Indeed, how to study the findings. English Friendly subject: International students bibliographic references in English, b) tutoring sessions	may request fror	n the teachers: a)	resources and

Training and Learning Results

Code

A2 Students have demonstrated knowledge and understanding in a field of study that builds upon their general secondary education, and is typically at a level that, whilst supported by advanced textbooks, includes some aspects that will be informed by knowledge of the forefront of their field of study

B1 Ability for auronomous learning

B3 Ability to manage information

C20 Know the structure and reactivity of the main classes of biomolecules and the chemistry of important biological processes

D1 Ability to solve problems

Expected results from this subject				
Expected results from this subject	Tr) and Le Results	arning
Understand the cell as a fundamental unit in the organisms.	A2	B1 B3	C20	D1
Describe the cellular structure in prokaryotes and eukaryotes.	A2	B1 B3	C20	D1
Differentiate the properties, organisation and function of the distinct cellular organelles.	A2	B1 B3	C20	D1
Associate the cellular structures with the metabolism.	A2	B1 B3	C20	D1
Identify and relate the metabolic routes of the distinct organic molecules.	A2	B1 B3	C20	D1
Recognise the structure and function of the hereditary material and interpret the principles of the central dogma.	A2	B1 B3	C20	D1
Discuss the processes of mutation and their implications for the evolution of organisms.	A2	B1 B3	C20	D1
Understand the methods of recombinant DNA.	A2	B1 B3	C20	D1
Understand the importance of the immune system.	A2	B1 B3	C20	D1

Methodologies	
Description	

Lecturing	In these classes, the professor will explain the concepts and fundamentals of the contents to facilitate their understanding. The contents for each section will be provided to the students through the online platform with sufficient time. It is recommended that the student works on this material, also consulting the recommended bibliography.
Problem solving	 These classes include the following aspects. a) Each student will have to perform a series of exercises to understand the topics of the subject. These exercises will be considered for the evaluation. b) Resolution of doubts on the previously explained concepts in the Lecture classes. c) The students, separately or in groups, will make illustrative schemes of the contents presented in the Lecture classes to have an overview of the subject, which will facilitate its understanding and interrelationships. d) We will work on some concepts that by experience are more difficult to understand and require a higher didactic support. e) If necessary, these classes will also be used to present works.
Mentored work	Performance (research of information, preparation, and presentation) of a work in a group. The work will be related to the fields of cellular biology, molecular biology, genetics, immunology, and biotechnology, and will be proposed by the professor. The professor could provide support and part of the necessary information for the performance of this activity. This activity will be considered for the evaluation.

Methodologies	Methodologies Description		
Mentored work	The activity of oral presentation of a work. Discussion and solving questions, exercises, and problems related to the activity. Each student can ask the professor the explanations that may consider to better understand the activity and successfully develop the proposed tasks. These queries will be attended in scheduled personalized sessions.		
Problem solving	Discussion and solving of questions, exercises, and problems related to the subject. Each student can ask the professor the explanations that may consider to better understand the activity and successfully develop the proposed tasks. These queries will be attended in scheduled personalized sessions.		

Assessmer					
	Description	Qualification	Traiı Learni	ning a ng Re	
Problem solving	Resolution by the students of a series of problems and/or exercises as academic follow-up of the student (skills CB1, CG1, CG3, CE20 y CT1).	15 /	2 B1 B3	C20	D1
Mentored w	ork The student performs an activity of oral presentation of a work. The evaluation considers the structuring and organization of the contents, the complexity of the work, the presentation of results and the consulted sources (skills CB1, CG1, CG3, CE20 y CT1). These works will be presented in the seminar sessions. Further information in "Other comments on the Evaluation".	10 /	A2 B1 B3	C20	
Essay questions exam	Exam at the middle of the course (partial) on the contents explained in the lectures and seminars. It will consist of short answer questions, although it could include some long answer questions (skills CB1, CG1, CG3, CE20 y CT1).		2 B1 B3	C20	D1
Essay questions exam	Final exam on the contents explained in the lectures and seminars. It will consist of short answer questions, although it could include some long answer questions (skills CB1, CG1, CG3, CE20 y CT1).	40	2 B1 B3	C20	D1

Other comments on the Evaluation

The student who performs the final exam will be considered as presented.

The final mark in the subject will be given by the weighted average of the evaluation in the mentioned sections. To pass the subject, the weighted average must be equal or higher than 5.0.

In the second call, the evaluation will be obtained by any of the following two options (selecting that one that would be better for the student):

1. The score reached by the student during the course in the supervised works and seminars is conserved (25% of the final mark). None of them are recoverable. An exam similar to that done at the end of the semester, this exam will include all the contents of the subject (skills CB1, CG1, CG3, CE20 y CT1). This exam will provide the 75% of the final mark.

2. An exam similar to that done at the end of the semester, this exam will include all the contents of the subject (skills CB1, CG1, CG3, CE20 y CT1). This exam will provide the 100% of the final mark.

Evaluation of the Mentored work

The student (in a team) performs an activity of oral presentation of a work related to the subject (10% of the final mark). The mark will be based on the work done by the student in this activity, the complexity, structuring and organization of the contents, and the sources consulted by the student (skills CB1, CG1, CG3, CE20 y CT1.

Global evaluation

The student who indicate it can be evaluated by a global evaluation, where the mark will be based on an exam (on all the contents of the subject) done at the end of the course.

Evaluation of students of the Seniors Programme

Students from the Senior Programme will be evaluated as follows:

- Mandatory attendance of the 75% of theoretical classes and seminars.

- Preparation and oral presentation of an individual or group work related to the subject that will be used to obtain the evaluation mark (skills CB1, CG1, CG3, CE20 y CT1).

Training and Learning Results

Code

- A1 Students can apply their knowledge and understanding in a manner that indicates a professional approach to their work or vocation, and have competences typically demonstrated through devising and sustaining arguments and solving problems within their field of study
- A2 Students have demonstrated knowledge and understanding in a field of study that builds upon their general secondary education, and is typically at a level that, whilst supported by advanced textbooks, includes some aspects that will be informed by knowledge of the forefront of their field of study
- B1 Ability for auronomous learning
- C22 Know and apply the foundations of Physics necessary to understand the theoretical and practical aspects of Chemistry that need it
- C29 Demonstrate ability for numerical calculations and interpretation of experimental data, with correct use of units and estimation of uncertainty
- D3 Ability to communicate in both oral and written form in Spanish and / or Galician and / or English

Expected results from this subject Expected results from this subject Training and Learning Results 1. Describe the frame of validity of Classical mechanics. A1 Β1 C22 D3 A2 C29 2. Calculate, from the initial state of a mechanical system, the values of his distinct dynamic A1 B1 C22 D3 magnitudes (energy, linear and angular moments). A2 C29 3. Calculate, given a group of strengths that act on a mechanical system, his temporary evolution, A1 B1 C22 D3 obtaining the corresponding paths and the temporary variation of his physical properties. A2 C29 4. Explain the importance of the theorems of conservation and apply any of them. A1 B1 C22 D3 A2 C29 5. Calculate the strength of push on an object in a fluid and relate the pressure, the height and the A1 B1 C22 D3 speed in a fluid in movement. C29 A2 6. Define and calculate the parameters that characterise the harmonic and standing waves. Β1 C22 D3 A1 A2 C29 7. Determine experimentally different physical magnitudes (density of solids and liquids, C22 A1 B1 D3 superficial tension, specific heat, etc.). A2 C29

*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies Lecturing Description Lecturing The teaching staff will expose the theoretical bases of the subject. They will present possible applications, formulate problems, questions and exercises. They will propose tasks and activities oriented towards the methods and techniques to employ to carry them out. Problem solving Activity in which we will propose problems and/or exercises related with the subject. The student should develop the correct solutions by means of exercice of routines, the application of formulas or algorithms, the application of procedures of transformation of the available information and the interpretation of the results. It will be employed as a supplement of the lectures. Practices through ICT Activities oriented towards learning and handling mathematical computer programs, for calculus and graphical representation of functions and data.

Personalized assistance		
Methodologies	Description	
Lecturing	Each student will request the teaching staff the clarifications that he/she sees fit for a better understanding of the subject and successfully develop the proposed tasks. These queries will be responded during the tutorials. The tutorial sessions will be able to be realized remotely having made a previous agreement with the professor.	
Practices through ICT	Each student will request the teaching staff the clarifications that he/she sees fit for a better understanding of the subject and successfully develop the proposed tasks. These queries will be responded during the tutorials. The tutorial sessions will be able to be realized remotely having made a previous agreement with the professor.

Essay questions exam	Final exam. It will include questions and exercises that the students wil answer organizing and presenting the knowledge that they have on the subject. It will take place on the official exam dates for each evaluation opportunity.		1 B4 C21 D1

Other comments on the Evaluation

The final qualification of the subject (NF) will be computed by the formula:

NF=A+(10-A)E/10

where A is the sum of the scores obtained by "Problem and/or exercise solving" (up to 6 points) and E is the "Essay questions exam" score (up to 10 points).

To pass the subject the final score has to be greater or equal to 5 points (NF>=5). The students who fail to pass the subject on the first opportunity, and want to do it on the second one, will have to repeat the "Essay questions exam". The score obtained by "Problem and/or exercise solving" will be the same for the second opportunity.

The qualification NOT PRESENTED can not be given to a student who attended at least one of the final exams.

*The information in the planning table	is for guidance only and doos no	t take into account the hot	are appoint of the students

*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies	
	Description
Lecturing	Presentation by the teacher of the contents on the subject under study, theoretical and / or guidelines for a job, exercise or project to be developed by the student.
Problem solving	Activity which formulated problem and / or exercises related to the course. The student should develop appropriate solutions or right through the exercise routines, application of formulas or algorithms, application processing procedures available information and interpretation of the results. It is often used to complement the lecture.

Methodologies	Description		
Problem solving	Each student will be able to request from the teacher the clarifications he deems appropriate for a better understanding of the subject and the successful development of the exercises and problems proposed. This consultation can also be attended during tutorials. The time and place, in which the tutorials of each teacher take place, is collected on the website of the center.		
Lecturing	Each student will be able to request from the teacher the clarifications he deems appropriate for a better understanding of the subject and the successful development of the exercises and problems proposed. This consultation can also be attended during tutorials. The schedule and the place, in which the tutorials of each teacher take place, is collected on the website of the center.		
Tests	Description		
Essay questions exan	m Each student has tutorials with teachers of the subject to solve individually the doubts that may arise throughout the course in any of its aspects: Theory classes, seminar classes or problem solving and / or autonomous activities that should perform the students. The objective of these tutorials is to help students to consolidate their knowledge and face the different evaluation activities that are proposed in better conditions (written tests, resolution of exercises).		

Essay questions exam

	Description	Qualification	۱	Trair	ning a	nd
			L	earnir	ng Re	sults
Problem solving	For each subject, problems, exercises and/or self-assessed tests will be proposed, which the students must solve in the seminar classes or outside the classroom. The score of this section will only be considered if in the essay questions exam the grade is equal to or greater than 5 out of 10.	32	A2	B1 B2	C1 C2 C8 C9	D1

Essay questions exam	A written exam about the contents taught until chapter 4. To pass the subject, a minimum grade of 5 out of 10 has to be obtained in the final written exam.	34	A2	B1 B2	C1 C2 C8 C9	D1
Essay questions exam	A written exam about the contents taught between chapter 5 and 8. To pass the subject, a minimum grade of 5 out of 10 has to be obtained in the final written exam.	34	A2	B1 B2	C1 C2 C8 C9	D1

Other comments on the Evaluation

First Opportunity (June-July)

Continuous assessment:

In the case of not achieving the minimum grade required in any test to pass the subject, the final grade will reflect as closely as possible the actual grade obtained throughout the course.

It is understood that a student has submitted to the evaluation of the subject and, therefore, a grade will be assigned, in the following cases:

1. If you take an exam with development questions.

2. If you participate in tests or continuous assessment activities beyond the deadlines established by the center for the request for global assessment modality. A minimum grade of 5 out of 10 is required to pass the subject.

Global assessment:

The students who have been granted the global evaluation by the deanship will have an exam of development questions (100%) that will be carried out on the official exam date for each evaluation opportunity. Within the official testing period marked in the academic calendar of each course. A minimum score of 5 out of 10 is required to pass the subject.

Evaluation of the students of the Integrated Cycle of the Senior Program:

- Mandatory attendance at 80% of theoretical classes and seminars.

- Completion of self-assessment problems, exercises or tests.
- Completion of a project on a topic related to the subject.

Second opportunity (July): The same criteria will be followed as in the first opportunity.

Training and Learning Results

Code

A2 Students have demonstrated knowledge and understanding in a field of study that builds upon their general secondary education, and is typically at a level that, whilst supported by advanced textbooks, includes some aspects that will be informed by knowledge of the forefront of their field of study

B2 Organization and planning capacity

C25 Safely handle chemical substances, considering their physical and chemical properties, evaluating the risks associated with their use and laboratory procedures and including their environmental repercussions

C26 Perform correctly usual procedures in the laboratory, including the use of standard chemical instrumentation for synthetic and analytical work

C27 Demonstrate the ability to observe, monitor and measure chemical processes, by systematically and reliably recording them and presenting reports of the work done

C28 Interpret data derived from laboratory observations and measurements in terms of their meaning and relate them to the appropriate theory

C29 Demonstrate ability for numerical calculations and interpretation of experimental data, with correct use of units and estimation of uncertainty

D2 Capacity for teamwork

D3 Ability to communicate in both oral and written form in Spanish and / or Galician and / or English

Methodologies	
	Description
Introductory activities	Each laboratory practice will be associated with a theoretical explanation that facilitates the students` understanding and realisation of it. Students must complete an initial questionnaire related to this experiment previously to the laboratory session, which can be found on Moovi.
Laboratory practical	Experimental practice. The laboratory experiments will be carried out individually, in sessions of 3 hours. The experimental procedure will be available to students on Moovi. It will be necessary the preparation of a laboratory notebook in accordance with the norms that are collected in Moovi.
Problem solving	After completing each practical session, the student will have to solve some questions found on Moovi.

Personalized assista	Personalized assistance					
Methodologies	Description					
Laboratory practical	During the practical sessions, the professor will resolve the questions regarding the experiment as well as the preparation of the laboratory notebook.					
Introductory activities	The professor will resolve any doubts related to the introductory questions of each practical session prior to carrying them out. Students can consult and/or request tutorials at the following link: http://quimica.uvigo.es/en/teaching/teaching-staff/					
Problem solving	The students will be able to consult the doubts related to the realisation of the final questionnaire for each practice. Students can consult and/or request tutorials at the following link: http://quimica.uvigo.es/en/teaching/teaching-staff/

Laboratory practice	The student will take a practical laboratory exam at the end of the semester	25	- -	B2 C25 C26 C27 C28 C29	D3

Other comments on the Evaluation

A minimum grade of 3.5 out of 10 will be required in each two practical exams, as well as in each other two evaluacion sections (introductory activities, laboratory practices and problem solving). If some of the parts do not exceed this minimum, the final grade will be a weighted grade (50%) of two practical laboratory exams.

Attendance at all laboratory sessions is mandatory. The absences must be justified.

Participation in continuous assessment test or activities or attendance at laboratory sessions after the deadline established by the center for the global evaluation modality request, implies on condition of being presented.

If the student waives the continuous evaluation and opts for a global evaluation, he must take a practical test in the laboratory (qualification 100%). In the global evaluation mode, attendance at all laboratory sessions is also mandatory as they are experimental practices.

In the call for June-July, a practical laboratory test will be carried out (qualification100%).

*The information in the planning table is fo	r guidance only and does no	ot take into account the het	erogeneity of the students

Methodologies	
	Description
Lecturing	First, the basic principles of crystallization are analyzed from a geological and thermodynamic point of view. Further, we introduce to the student the fundamentals of isotope geochemistry. Next themes are devoted to the structural characterization of crystals, analyzing the concepts of periodicity and symmetry in 2D and 3D crystalline lattices.
	Finally we introduce the principles and practical aspects of diffraction techniques applied to the estructural analysis
Mentored work	A short paper will be write by groups summarizing the laboratory work. Some guidelines concerning formats and content will be given before the realization. A seminar will be assigned to guide each working group in this task.
Laboratory practical	They will be dedicated to the study of the crystallization process, analyzing three aspects: (1) Crystallization in nature: mineral recognition (2) Optical microscopy with polarized light. (3) Crystal growth from solutions and silica gels in the laboratory.
Problem solving	Seminars will be used to solve practical exercises about nucleation and crystal process and to solve issues related to crystallographic notation and concepts

Personalized assistance Methodologies Description

Problem solving The resolution of exercises will be carried out during the seminars by answering to the questions raised in class.

Mentored work They will be developed in the computer classroom and in theoretical class as well as through the realization of tutorials or consultations using the Tema platform or the electronic mail.

Assessment			
	Description	QualificationT	raining and Learning Results
Mentored work	The completion of a report/work whose content will be related to the activity carried out in the laboratory and seminars will be evaluated.	10	
Laboratory practical	The activity carried out in the mineralogy laboratory and in the completion of exercises and questionnaires proposed through the Moovi platform will be evaluated.	30	
Problem solving	The seminars will also include exercises and/or problems.	20	
Objective questions exam	Exam with short questions and multiple choice questions, exercices, as well as a topic about the content of the theoretical classes and/or seminars.	40

Methodo	logies

Description
a) The exercises and problems will be solved, by the students or by the teacher. a) Problem sheets
will be available with sufficient anticipation, either at the course web page or in printed form.
b) The different tasks that the students have to carry out will be programmed.
c) The different tasks that students have to carry out, as presentations based on discussions or the
first test, will be assessed.
a) Laboratory activities will be carried out in groups. b) In order that the students have a clear idea
of the objectives to reach and the available material, information about laboratory work will be
provided with enough time in advance. c) In the laboratory, students will be assisted by a teacher.
 a) In each topic the specific objectives will be analyzed. Its need and the possible applications will be indicated.
b) The way to reach objectives will be indicated. Emphasis will be made on those aspects that are more problematic and difficult. Different examples will be solved.
c) Bibliographic references will be proposed
d) Diverse tasks that students have to carry out will be programmed.

Personalized assistance

Methodologies Description

SeminarsDoubts will be discussed and clarified individually or during the debates that may arise.Laboratory practicalThe questions that can arise during the conduct of the practices will be clarified .

Assessment						
	Description	Qualification	Le	arni	ning a ing Re	
Laboratory practical	 Practices of laboratory: a) They are compulsory for all the students. b) They are compulsory to pass the subject. c) The minimum mark to pass will be of 5 out of 10. d) The student's laboratory work will be monitored and given a mark. e) The report of the practices, elaborated by the student, will be assessed. 		42	B1	C22 C29	D3
Essay questions exam	Continuous evaluation. Three written tests. They will be 35% of the final mark: a) The minimum qualification to pass each one of these tests will be of 5 out of 10. b) The third test will be done with the first term final exam. c) The marks of the two first tests will be kept until the first term fina exam. d) At the first term's final exam each student will have the opportunity to repeat the test he/ she has failed. e) Students who have not passed the three written tests but whose grade is 5, or higher, will appear with a grade of 4 in the records. The students who do not wish to follow the continuous evaluation will have one written test, which will contribute 40% of the final mark: a) The exam will have three parts. b) It is neccesary to pass each one of these parts to pass the subject. The minimum qualification to pass each part will be of 5 out of 10.	1	A1 A2	B1	C22	D3
Objective questions exam	Intended for students who wish to follow the continuous evaluation: sort written tests related with the contents of the subject will be carried out during seminar time.		1 1 1		C22	D3
Problem and/or exercise solving	 Continuous evaluation. Three written tests. They will be 35% of the final mark: a) The minimum qualification to pass each one of these tests will be of 5 out of 10. b) The third test will be done with the first term final exam. c) The marks of the two first tests will be kept until the first term fina exam. d) At the first term's final exam each student will have the opportunity to repeat the tests he/ she has failed . e) Students who have not passed the three written tests but whose grade is 5, or higher, will appear with a grade of 4 in the records. The students who do not wish to follow the continuous evaluation will have one written test, which will contribute 40% of the final mark: a) The exam will have three parts. b) It is neccesary to pass each one of these parts to pass the subject. The minimum qualification to pass each part will be of 5 out of 10. 	I I	A1 A2	B1	C22	D3

General	The subject is a basic introduction to vector calculus, d	lifferential equation	ns and statistics.	It will be oriented to		
description	apply the mathematical models studied to specific pro	blems of the scient	tific fields.			

Training and Learning Results

Code

A1 Students can apply their knowledge and understanding in a manner that indicates a professional approach to their work or vocation, and have competences typically demonstrated through devising and sustaining arguments and solving problems within their field of study

B4 Ability for analysis and synthesis

C21 Know mathematical concepts based on previous ones and be able to use them in the different contexts of Chemistry D1 Ability to solve problems

Expected results from this subject				
Expected results from this subject	Tr	aining	and Le	arning
			Results	
To use vector calculus to compute lengths of curves, areas of surfaces and the curl of a vector field.	A1	Β4	C21	D1
To build and solve differential equation models of simple systems from physics or chemistry.	A1	B4	C21	D1
To compute probabilities associated to discreet and continuous random variables that follow well known probability distributions.	A1	B4	C21	D1
To use computer programs for mathematical computations and graphic representation.		B4		D1

Methodologies	
	Description

Lecturing	The teachers will present the theoretical foundations of the different topics; showing possible applications; formulating problems, questions and exercises; and proposing tasks and activities with orientations on the methods and techniques to employ to carry them out.
Practices through ICT	Activities oriented to learn how to handle computer programs for the calculation and graphic representation of functions and data.
Problem solving	The students will have to solve the proposed problems and exercises on vector calculus.
Problem solving	The students will have to solve the proposed problems and exercises on differential equations and probability.

Personalized assista	ince
Methodologies	Description
Lecturing	The doubts concerning the theoretical concepts presented in the classes will be attended in tutoring hours.
Problem solving	The doubts relative to vector calculus will be attended during the classes and in the scheduled tutoring hours.
Practices through ICT	The doubts relative to the laboratory classes will be attended in the scheduled tutoring hours.
Problem solving	The doubts relative to differential equations and probability will be attended during the classes and in the scheduled tutoring hours.
Tests	Description
Essay questions exam	The doubts relative to the final examinations will be attended in the scheduled tutoring hours.

Assessment				
	Description	Qualification	Training Learni Resu	ing
Problem solving	Tasks (that conform the so called continuous evaluation) in which each studen will have to solve applied problems or exercises of vector calculus.	t 30	A1	D1
Problem solving	Tasks (that conform the so called continuous evaluation) in which each studen will have to solve applied problems or exercises of ordinary differential equations and probability.	t 30	A1	D1
Essay questions exam	Final examination. Individual exam that will take place right after the class period and that will include theoretical questions and exercises.	40	C21	

Other comments on the Evaluation

The final qualification of the subject (NF) will be compute by the formula:

NF = A + (10 - A)E/10

where A is the continuous evaluation score and E is the final examination score.

To pass the matter the final score has to be bigger or equal than 5 points (NF>=5). The students who fail to pass the matter at the first opportunity and want to do it in July, will have to repeat the final examination. The continuous evaluation score will be the same for the July evaluation.

The qualification NOT PRESENTED could not be assigned to a student who attended at least one of the final exams.

 Description

 Lecturing
 Presentation by the teaching staff of the fundamental aspects and contents of each topic, based on the material available on the MOOVI platform. Numerical problems will also be formulated to help understand and establish concepts.

 Seminars
 The seminar classes will be fundamentally dedicated to solving problems and, when necessary, delving into those aspects that present the greatest difficulties for the students.

Problem and/or exercise solving	In addition to the Problem Bulletins, at the end of each topic or group of topics, a series of "Evaluable Exercises" will be proposed that the students will have to solve autonomously and deliver within the deadline set by the teaching staff.		A2 B1 C1 D1 B2 C2 C11 C12
Self-assessment	At the end of each topic, students will have the opportunity to answer, through the MOOVI platform, a self-correcting "Self-Assessment Test".	10	B1 C1 C2 C11 C12

Other comments on the Evaluation

Continuous assessment:

- The voluntary work of the students ("*Self-assessment Test*" and "*Evaluable Exercises*") may constitute up to 25% of the final grade as long as the student carries out at least half of the activities proposed throughout the course.

- <u>To pass the subject</u>, it is an essential requirement that the average of the grades in the <u>written exams</u> be <u>equal to or</u> <u>greater than 4.0 out of 10.0 points</u>. In the case of not achieving this score, the qualification that will be reflected in the record will only be the average of the written exams grades, not counting any of the other sections.

- <u>To pass the subject</u>, it is an essential requirement to obtain a grade <u>equal to or greater than 5.0 points out of 10</u> in the overall grade of the subject (15% evaluable exercises, 10% self-assessment questionnaires and 75% written exams).

Overall evaluation:

Students who, within the deadline set by the Faculty, opt for the *Global Assessment* modality, will take a global written exam on the date set by the Xunta de Facultade. This global written exam will account for 100% of the grade for the subject.

- <u>To pass the subject</u>, it is an essential requirement to obtain a grade <u>equal to or greater than 5.0 out of 10.0</u> in the overall written exam.

Presented/Non-Presented Status:

The participation of the students in any of the written exams will imply the condition of "presented" and, therefore, the assignment of a grade.

Second opportunity:

In the case of the *Continuous Evaluation* for the evaluation of the second opportunity, the qualifications of the "*Evaluable Exercises*" and the "*Self-assessment Test*" will be maintained.

Methodologies	
	Description
Introductory activities	At the beginning of each laboratory session, the teacher will present the contents to be developed by the students.
Laboratory practical	 Laboratory experiments corresponding to separation and identification of metals in aqueous solution and titrations will be carried out in 9 sessions of 3 hours.
	 Prior to the beginning of each practice, the student will find support material on MOOVI for the preparation of the experiments to be carried out. The student will be provided with questionnaires to be fill in before the start of the first practice session, where key content is collected for carrying out the practices.
	- During the development of the practices, the student will elaborate a laboratory notebook in which he / she must write down all the observations related to the experiment carried out.

Laboratory practical

- Laboratory experiments corresponding to the determination of chemical properties, calorimetry, chemical equilibrium and chemical kinetics will be carried out in 9 sessions of 3 hours.

- Prior to the beginning of each practice, the student will find support material on MOOVI for the preparation of the experiments to be carried out. The student will be provided with questionnaires to be fill in before the start of the first practice session, where key content is collected for carrying out the practices.

- During the development of the practices, the student will elaborate a laboratory notebook in which he / she must write down all the observations related to the experiment carried out.

Personalized assista	Personalized assistance				
Methodologies	Description				
Laboratory practical	Each student will be able to request from the teacher the clarifications that it deems appropriate for a better understanding of the subject and the successful development of the proposed tasks. These consultations will be attended during tutorials.

Essay questions exam	Each student will be able to request from the teacher the clarifications that it deems appropriate for a better understanding of the subject and the successful development of the proposed tasks. These consultations will be attended during tutorials.				

Assessment					
	Description	Qualificatior		ning a ing Re	
Laboratory practical	- The teacher will monitor the experimental work done by the student in the laboratory sessions corresponding to separation and identification of metals in aqueous solution and titrations through observation, questionnaires and / or the laboratory notebook.		A2 B2	C25 C26 C27 C28 C29	
	- Since it is a experimental subject, the ATTENDANCE to the laboratory sessions is COMPULSORY.		_		
Laboratory practical	- The teacher will monitor the experimental work done by the student in the laboratory sessions corresponding to the determination of chemical properties, calorimetry, chemical equilibrium and chemical kinetics through observation, questionnaires, tasks and / or the laboratory notebook.	20	A2 B2	C25 C26 C27 C28 C29	
	- Since it is a experimental subject, the ATTENDANCE to the laboratory sessions is COMPULSORY.				
Laboratory practice	Two practical laboratory tests will be carried out to assess the competences and skills acquired by the student.	30	A2 B2	C25 C26 C27 C28 C29	D3
Essay questions exam	Once all the practical sessions are finished, two short written tests will be carried out regarding the concrete aspects of the operations carried out in the laboratory.	20	A2 B2	C28 C29	D3

Other comments on the Evaluation

- The absences in laboratory sessions must be duly justified by an official document. These absences will penalize the grade.

- One unexcused absence implies the direct failure of the subject.

- More than 3 excused absences will mean failing the subject.

First ordinary examination call

- Attendance at more than two laboratory sessions implies that the student is already being evaluated, so that his/her qualification in the record can not be "not presented".

- It is necessary to obtain a grade higher than 4 (out of 10) in each of the sections of the evaluation to make an average. This criterion will also be applied in second call.

- The final grade will be the sum of the grades of all the sections provided that the required minimums are exceeded.

- It will be necessary to obtain a mark of more than 3 out of 10 in each of the practical laboratory tests and reach the minimum mark required in the "Laboratory practice" section (mark of more than 4 out of 10) to be able to average the rest of the evaluation elements.

- It will be necessary to obtain a mark of more than 3 out of 10 in each of the short written tests and reach the minimum mark required in the "Essay questions exam" section (mark of more than 4 out of 10) to be able to average the rest of the evaluation elements.

- In the case of not passing the subject, the grade of the record will be the weighted grade of the practical laboratory test and essay question exam.

Second ordinary examination call

In second call, the evaluation will be carried out in the following way: the score obtained by the student during the course will be kept in the section "laboratory practices" (not recoverable). The rest of the sections (laboratory practice, exam) can be recovered. In the event of having passed any of the practical and/or short written tests (marks of 5 out of 10 or more), the marks obtained by the student will be retained so that he/she will only have to repeat those tests that have not been passed in the first ordinary exam call. The final grade will be the sum of the grades of all the sections as long as the required minimums are exceeded. If the subject is not passed, the grade of the record will be the weighted grade of the practical laboratory test and essay question exam.

Subject 1. Amino acids and peptides	Amino acids: structure and classification. The peptide bond. Natural peptides of biological interest.
Subject 2. Proteins	General concept. Main functions of the proteins. Structural levels of the proteins
Subject 3. Enzymes and catalisis enzymatic	Concept, nomenclature and classification of the enzymes. Characteristics of the active centre. Kinetical of the enzymatic reactions: equation of Michaelis-Menten. Kinetical of the alosteric enzymes. Other mechanisms of the modulation of the enzymatic activities
Subject 4. Glucides	Monosaccharides: aldoses and cetoses. Linear structure. Structure cyclic and space formings. Monosaccharides of biological interest. Oligosaccharides and polysaccharides: general characteristics, structure and types more important to biological level.
Subject 5. Lipids	General characteristics and biological importance of the lipids. General classification. Characteristics and structure of the fatty acids. Saponifiable lipids: neutral and polar. Unsaponifiable lipids: eicosanoids, isoprenoids and steroids.
Subject 6. Vitamins and coenzymes	Structure and function of vitamins and coenzymes in metabolic reactions.
Subject 7. Nucleotides: structure and function	Biological importance. Composition and structure of nucleosides and nucleotides. Functions of the nucleotides.
Subject 8. Introduction to the metabolism.	General concepts of the energetic metabolism. The equivalent of the ATP. Definition of metabolic route: catabolic, anabolic and amphibole routes. Importance of the regulation of the metabolic routes.
Subject 9. Glycolysis and pyruvate metabolic destination	Stages and reactions of the glucolisis. Biological importance of this universal route. The glucolisis how amphibole route. Pyruvate metabolic destinations in anaerobiosis (fermentation lactic and alcoholic) and aerobiosis (acetilCoA synthesis in the mitochondrial matrix). Reoxidation of the cytosolic NADH. Stoichiometry and energetic balance of the glucolisis.
Subject 10. Cycle of the tricarboxilic acids (cycle of Krebs) and Pentose phosphate pathway	Central position of the acetilCoA molecule in the energetic metabolism. Reaccions of the cycle of Krebs. Paper of the cycle of Krebs like amphibole route. Energetic balance of the cycle Krebs and of the aerobic degradation of the glucose. Pentose phosphate pathway
Subject 11. Chain of electronic transport and oxidative phosphorylation	Chain of electronic transport: components, location and sequence of the electronic transport. Oxidative phosphorylation: ATP sintase enzymatic complex.
Subject 12. Gluconeogenesis	Overview of the synthesis of glucose de novo. Main gluconeogenic substrates. Own reactions of the gluconeogenesis.
Subject 13. Metabolism of the fatty acids	Activation and intracelular trnasport of the fatty acids. The beta-oxidation of the fatty acids. Energetic balance of the acid palmitic. Biosynthesis of acids fatty: acetilCoA carboxilase and Fatty acid synthase reaction. Elongation and desaturation of fatty acids.
Subject 14. Degradation of the amino acids and destination of the ammonium ion .	Overview of the catabolism of the amino acids: transamination and oxidative desamination reactions. Destination of the carbonate skeleton of the amino acids. Form of excretion of the ammonium ion in the alive organisms: the urea cycle
Subject 15. Aminoacids anabolism.	Nitrogen cycle in the nature. Incorporation of the ammonium ion to the biomoléculas through the glutamate and glutamine. Aminoacids biosynthesis.
Subject 16. Experimental methods in Biochemistry	Techniques used in the field of protein study: homogenization, subcellular fractionation, precipitation with salts, chromatographic, electrophoretic

Methodologies	
	Description
Lecturing	In these classes the professor will explain and will develop the concepts and basic foundations of the *temario of clear form and *amena to facilitate his understanding. The contents of each subject will be exposed in the platform FEAR with sufficient time so that the students can consult them. It recommends that the student work on this material, consulting besides the bibliography recommended.
Problem solving	In this section we will try to: a) Each student of individual way or in groups will have to do a series of exercises to strengthen the study and understanding of the matter. These exercises will be considered for the evaluation. b) Clarify the doubts of the concepts previously explained in the master classes and in the seminars. c) In this section, we will also work on some contents related to energy metabolism, which, due to their difficult understanding, require didactic support.
Mentored work	Realization (search for information, preparation and presentation) of two work groups of 5 students. The works will be related to some of the contents of the subject of Biochemistry and will be proposed by the teacher. The teacher will be able to provide some of the information necessary for its execution. The work will be considered for evaluation.

Personalized assista	
Methodologies	Description
Lecturing	To resolve all the doubts that can arise in relation to the masterclasses, the students have to his disposal personalized tutorials that will take place in the dispatch 9 (block B of the Building of Experimental Sciences, flat 3 ^o) of the professor PILAR SÚAREZ ALONSO, in the schedule established.
Problem solving	To resolve all the doubts that can arise in relation to the seminars, the students have to his disposal personalized tutorials that will take place in the dispatch 9 (block B of the Building of Experimental Sciences, flat 3 ^o) of the professor PILAR SÚAREZ ALONSO, in the schedule established.
Mentored work	To resolve all the doubts that can arise in relation with the realization of the works, the students have to his disposal personalized tutorials that will take place in the dispatch 9 (block B of the Building of Experimental Sciences, flat 3 ^o) of the professor PILAR SÚAREZ ALONSO, in the schedule established.

Assessme		0 110 11	
	Description	Qualification	Training and Learning Results
Problem solving	The assistance the masterclasses and seminars is very recommended for the back realization of a series of exercises: multiple choice questions, reasoning questions and various calculations that will reinforce the content acquired by the student. The realization of the exercises of each subject is obligatory and always in groups of 2 or 3 students. They are not individual. It is essential to obtain a minimum score of 6.0 out of 10 to be able to consider the rest of the sections. This activity is not recoverable if the required minimum is not reached.		A1 B1 C20 D3 A3
Mentored work	The realization of the works is obligatory, always in groups of 4 or 5 students and they will deal with some of the contents of the subject of Biochemistry. Both individual student work and group work will be assessed. The structure, originality, use of language in general and scientific terminology will be taken into account. The adequacy of the format previously required will also be taken into account. The works may be presented in the languages: Galician or Spanish. It is essential to obtain a minimum score of 7.0 out of 10 to be able to consider the rest of the sections. This activity is not recoverable if the required minimum is not reached.		A3 B1 C20 D3 A5 B3 B4

Objective questions exam	There will be a partial test in the middle of the academic year, which will consist of test questions and short questions, and will represent 20% of the Biochemistry subject. It is essential to obtain a minimum grade of 5.0 out of 10 to be able to weigh with the rest of the sections. For students who passed the previous partial test, the final exam will cover the syllabus from the first partial onwards, and will represent 40% of the final grade. For students who did not pass the previous test, this exam will correspond to the entire Biochemistry syllabus and will account for 60% of the final grade. In any case, it is essential to obtain in this section a minimum grade of 5.0 out of 10 to be able to pass the Biochemistry subject, as well as weigh with the rest of the sections.	25	A1 B1 C20 D3 B3
Essay questions exam	There will be a second partial written test corresponding to the Metabolic Biochemistry part (items 8 - 15) on the date approved by the Faculty Board (consult the center's website). This test will consist of multiple choice questions, a metabolism integration question that includes the calculation of ATP performance. It is essential to obtain a minimum grade of 4.0 out of 10 in order to be weighted with the rest of the sections. This test will account for 35% of the final grade for the Biochemistry subject.	35	A3 B1 C20 D3 A5 B3 B4

The evaluation of the subject of Biochemistry is continuous throughout the entire academic year. To be evaluated in this way, the student must carry out all the evaluable activities (problem solving, tutored work and two partial written tests).

The particular situations of each student that prevent participation in these activities on a regular basis (Example: employment contract, illness... etc) must be communicated as soon as possible to the responsible teacher to find a solution.

To pass the Biochemistry course (final grade as the sum of the weighted grades) it is essential to have obtained a grade equal to or higher than the minimum grade required in each of the activities that can be evaluated separately. If this is not the case, the total calculation will not be carried out and the grade that will appear in the Biochemistry report will be the highest of the failed sections, and the student must take the entire subject exam in the second call (July).

The final exam in the xullo call is equivalent to 60% of the final grade and is considered approved when a grade equal to or greater than 4.0 out of 10 is achieved.

It is important to note that problem solving activities and tutored work are not recoverable.

In the event that the student does not participate in any of the evaluable activities, he will appear as NOT PRESENTED in the Biochemistry certificate in both calls (January and July). On the contrary, participation in some of the evaluable activities but not in all of them will automatically imply a fail in the Biochemistry Act (both calls).

These criteria will be applied identically in the two calls (January and July).

The notes of the activities carried out during the course (solving exercises, supervised works and partial examination of objective questions) are kept throughout the academic year, as long as they have reached the required minimum grade.

Describe the fundamental steps of the analytical process like methodology for the resolution of analytical problems.	A3	В4	C6	D1
Identify basic analytical properties and errors that can affect analytical results.	A3	B4	C6 C29	D1
Solve the possible interaction between concurrent reactions in solution (acid-base, complexes, precipitation and redox).	A1	В4	C6 C29	D1
Construct and interpret titration curves (acid-base, complex, precipitation and redox) and select the most appropriate indicators in each case.	A3	Β4	C6 C29	D1
Handle the systematic calculation in volumetric and gravimetric analysis and interpret the results.	A3	B4	C6 C26 C29	D1
Experimentally apply volumetric and gravimetric analysis procedures and correctly express the results obtained.	A1 A3	B4	C6 C26 C29	D1
Appropriately handle the material used in the analytical laboratory and apply the safety standards required.	A1		C26	D1

Contents Topic

Subject 1: Analytical Chemistry and analytical process

Analytical chemistry as a metrological science. Classification of analytical methods. The analytical process: stages.

Subject 2. Evaluation of the analytical results	Analytical properties. Errors in Analytical Chemistry: Classification. Basic statistics applied to the expression of the analytical results. Comparison and rejection of results.
Subject 3: Introduction to volumetric and gravimetric quantitative analysis	Volumetric reactions. Standard solutions. Direct, indirect and back titrations. Formation, properties and purity of precipitates. Calculations of gravimetric and volumetric analysis.
Subject 4: Acid-base titrations	Behavior of monoprotic, polyprotic and amphoteric species. Titration curves. End point detection: acid-base indicators. Titran reagents. Analytical applications.
Subject 5: Complexometric titrations	Stability of the complexes. Masking reactions. Titration curves. Detection of the end point: metallochromic indicators. Analytical applications.
Subject 6: Precipitation titrations.	Factors affecting the solubility of precipitates. Titration curves. Detection of the end point: Mohr, Volhard and Fajans methods. Analytical applications.
Subject 7: Redox titrations	Factors influencing the redox potential. Titration curves. Detection of the end point: redox and specific indicators. Analytical applications.
Gravimetric analysis (Laboratory)	Gravimetric determination of nickel with dimethylglyoxime. (1 session)
Acid-base titrations (Laboratory)	Determination of the acidity of a vinegar sample. (1 session)
	Determination of acetylsalicylic acid in analgesics (1 sesion)
Complexation titrations (Laboratory)	Determination of the hardness of a water sample . (1 session)
Precipitation titrations (Laboratory)	Determination of chloride in seawater using the Mohr method. (1 session)
Redox titrations (Laboratory)	Determination of wealth in oxygen in a hydrogen peroxide sample. (1session)
	Determination of active chlorine in a bleach sample. (1 session)
Resolution of a practical case (Laboratory)	Analysis of a problem sample of unknown composition. (1 session)
Resolution of a practical case (Laboratory)	Determination of active chlorine in a bleach sample. (1 session) Analysis of a problem sample of unknown composition. (1 session)

Methodologies	
	Description
Lecturing	They are theoretical classes in which the professor will explain each one of the topics of the program, emphasizing in the most relevant aspects and in those with more difficulty for the student. The classes will be developed interactively with the students, commenting the on-line material (available in Moovi) and the most appropriate bibliography for the preparation, in depth, of each topic.
Seminars	In the seminars, numerical exercises will be solved to reinforce the knowledge acquired in the theoretical classes. These exercises will be available in Moovi, as worksheets. The teacher may request the students to provide, individually, some of the proposed exercises to be reviewed and evaluated.
Laboratory practical	Laboratory experiments will be carried out in sessions of 3.5 h each. The students will have the guidelines of practices with sufficient anticipation (on-line material), so that they can have a previous knowledge of the experiments to performe. During the development of the practices the student will elaborate a notebook in which they will annotate all the relative to the experiment carried out (reactions, procedures, observations, results, etc.).Those students who have passed the laboratory practices in the academic years 2022-23 and 2023-24, do not need to repeat them. In this case, the marks reached in the laboratory sessions will be maintained.

Personalized assistance		
Methodologies	Description	
Seminars	Time dedicated by the professor to attend to all the doubts and questions made by the student during the course. The available time will be informed in the presentation of the course.	

Time dedicated by the professor to attend to all the doubts and questions made by the student during the course. The available time will be informed in the presentation of the course.

Laboratory practical Time dedicated by the professor to attend to all the doubts and questions made by the student during the course. The available time will be informed in the presentation of the course.

	Description	Qualificati	on Training an Learning Results
Seminars	It will value the resolution, by part of the students, of some of the problems and/or exercises proposed in the worksheets, that have to be delivered to the professor.	15	A1 C6 D1 A3 C29
Laboratory practical	The professor will made an evaluation of the experimental work carried out by the students in the laboratory sessions, evaluating the skills acquired as well as the results of each experiment. It is important to indicate that it is COMPULSORY the assistance to all the laboratory sessions. The lack of assistance will penalize the mark and when the number of absences is upper than 25 % of the laboratory sessions, students will not be allowed to pass the practical part of the course.	15	A1 C6 D1 A3 C26 C29
Essay questions exam	SHORT PROOF: A first written proff will be held when the first part of the programme has been given, in which the competences acquired up to that point will be assessed. This exam will not eliminate subject matter and will be carried out on the date indicated in the academic programme of the course, approved by the Faculty Meeting.	15	A1 C6 D1 A3 C29
Essay questions exam	FINAL EXAM: At the end of the course there will be a written proof consisting of theoretical questions and numerical exercises. In order to average both parts it will be necessary to achieve a minimum mark of 3 points out of 10 in each of them. In addition, the student must achieve in this exam a minimum mark of 4 points out of 10 to be added to the rest of the evaluation elements. This test will be carried out on the date indicated in the academic programme of the course, approved by the Faculty Meeting.	40	A1 C6 D1 A3 C29
Laboratory practice	In the last laboratory session, it will make a laboratory proof that will allow to evaluate all the competences and skills acquired by the student during the laboratory sessions. It is mandatory to overcome this exam, with a minimum mark of 5 points out of 10, to pass the practical part of the course.	15	A1 C6 D1 A3 C26 C29

Other comments on the Evaluation

First opportunity (continuous evaluation): To pass the course, it is compulsory to pass individually each one of the parts: theory and laboratory practices. For this, it is necessary to achieve a minimum mark of 4 points out of 10 in the final exam (at the end of the course) and 5 points out of 10 in the laboratory proof. The mark corresponding to the practical part of the curse (laboratory) will be only taken into account in the final mark once the theory has been passed. The participation of the student in written exams and the assistance to laboratory sesions (two or more) will involve the condition of presented and, therefore, the assignment of a mark.

Second opportunity (continuous evaluation): In the second opportunity (July) the student may repeat those exams (theory and/or laboratory) that have not passed in the first opportunity. It will be preserved the mark reached by the student, during the course, in the laboratory practicals (15%). In this announcement, the exam corresponding to the theoretical part of the course will represent the 70% of the final mark and the laboratory proof the 15%, always following the same considerations established for the first opportunity.

Global evaluation mode (non-continuous): Students who wish to use this evaluation mode must inform, by writing, within the period stablished in the Faculty at the beginning of the course. In this case, the evaluation will consist of the following parts: laboratory practices (30%) and global evaluation exam (70%) and it will be necessary to achieve a minimum mark of 5 points out of 10 in each of the proofs (theory and laboratory) in order to pass the course.

	Description
Lecturing	They will consist of an exposition by the teacher of the fundamental aspects of each topic, based or the material available on the MOOVI platform. Numerical problems will also be formulated to help understand and settle concepts.
Seminars	The seminar classes will be devoted mainly to solving problems and, when necessary, to delve into the aspects of the topics that present the greatest difficulties for the students.
Laboratory practical	 Carrying out, under the supervision of the teaching staff but independently, of laboratory practices in sessions of 3.5 hours. With enough time in advance, the students will have the scripts for the practices to be carried out on the MOOVI platform, along with all the additional material necessary. The script will present the essential elements to carry out the practice at an experimental level, as well as the basic points of its theoretical foundation and data treatment. At the end of the practices, and within the term set by the teaching staff, it will be necessary to deliver the report of one of them, prepared following the guidelines given by the teaching staff.

			-

Continuous assessment:

The voluntary work of the student ("Self-assessment Test" and "Evaluable Exercises") may constitute up to 20% of the final grade provided that the student performs at least half of the activities proposed throughout the course. course.
To pass the subject, it is an essential requirement that the average of the marks in the written exams be equal to or greater than 4.0 out of 10.0 points. In the case of not reaching said score, the qualification that will be reflected in the minutes will only be the average of the qualifications of the tests, not counting any of the other sections.

- To pass the subject, it is an essential requirement to <u>carry out the laboratory practices and obtain in them a minimum</u> <u>global qualification of 5.0 out of 10 points</u> (50% laboratory work, 50% report). In the case of not reaching said score, the grade that will be reflected in the minutes may not exceed 4.0 points.

- <u>Attendance to the practical sessions is mandatory</u> and, therefore, it is not possible to pass the subject if it has not been done.

- <u>To pass the subject</u>, it is an essential requirement to <u>obtain a grade equal to or greater than 5.0 points out of 10 in its</u> <u>overall grade</u> (10% laboratory practices, 12% evaluable exercises, 8% self-assessment questionnaires and 70% written tests).

Overall evaluation:

Students who, within the term set by the Faculty, opt for the Global Assessment modality, will take a global written exam on the date set by the Xunta de Facultade. This overall written test will account for 85% of the grade for the subject.

In this global evaluation, the Laboratory Practices will constitute 7% of the qualification of the subject and 8% the corresponding reports.

- <u>To pass the subject</u>, it is an essential requirement to obtain a <u>grade equal to or greater than 4.0 out of 10.0</u> <u>in the overall written exam</u>. In case of not reaching said score, the qualification that will be reflected in the minutes will only be the qualification of the global test, not counting any of the other sections.

-<u>To pass the subject</u>, it is an essential requirement <u>to carry out the laboratory practices and obtain an overall</u> <u>minimum grade of 5.0 out of 10 points</u> (47% laboratory work, 53% report). In the case of not reaching said score, the grade that will be reflected in the minutes may not exceed 4.0 points

- <u>To pass the subject</u>, it is an essential requirement to obtain a <u>grade equal to or greater than 5.0 points out of</u> <u>10 in its overall grade</u> (85% overall test, 7% laboratory practices and 8% practice reports).

<u>Examined/Not Examined Status</u>: The participation of the students in one of the two written tests or the attendance of more than two laboratory sessions will imply the condition of "taked exam" and, therefore, the assignment of a qualification.

<u>Second opportunity</u>: In the case of the Continuous Evaluation for the evaluation of the second opportunity, the qualifications of the "*Evaluable Exercises*", of the "*Self-assessment Test*", of the laboratory practices and of the corresponding reports will be maintained.

In the case of the Global Evaluation for the evaluation of the second opportunity, the qualifications of the laboratory practices and the corresponding reports will be maintained.

Training and Learning Results

Code

- A2 Students have demonstrated knowledge and understanding in a field of study that builds upon their general secondary education, and is typically at a level that, whilst supported by advanced textbooks, includes some aspects that will be informed by knowledge of the forefront of their field of study
- A3 Students have the ability to gather and interpret relevant data (usually within their field of study) to inform judgments that include reflection on relevant social, scientific or ethical issues
- B1 Ability for auronomous learning
- B3 Ability to manage information

B4 Ability for analysis and synthesis

- C8 Know the characteristic properties of the elements and their compounds, including the relations between groups and their variations in the periodic table
- C9 Know the structural aspects of chemical elements and their compounds, including stereochemistry
- C26 Perform correctly usual procedures in the laboratory, including the use of standard chemical instrumentation for synthetic and analytical work
- D2 Capacity for teamwork

Methodologies	
	Description
Lecturing	Presentation by the teaching staff on the subject to be developed, with special emphasis on the most important or difficult to understand aspects for students. Teachers will use the Moovi platform to provide information on the subject or its development.
Seminars	One hour per week will be dedicated to discuss and resolve issues on the subject previously the students will have to work.
Laboratory practical	The experiments will be carried out over 8 sessions of 3.5 hours each. The student body you will have the practice scripts as well as the necessary support material on the platform Moovi so that you can have prior knowledge of the experiments to be performed. The students must prepare the laboratory notebook during the practicals.

Methodologies	Description
Lecturing	Personalized attention will be given to students through individual tutorials. In these, an attempt will be made to answer all the doubts that the students have about the subject taught in theory. The schedule available for these tutorials will be indicated in the presentation of the subject, and will always be as information on the Moovi platform.
Seminars	Personalized attention will be given to students through individual tutorials. In these, an attempt will be made to answer all the doubts that the students have about the subject taught in seminars. The schedule available for these tutorials will be indicated in the presentation of the subject, and will always be as information on the Moovi platform.

Laboratory practical Personalized attention will be given to students and also individual tutorials if needed. The schedule available for these tutorials will be indicated in the presentation of the subject, and will always be as information on the Moovi platform.

exam	practices. This test may be eliminatory when students achieve a minimum		A3 B3	C9	
	grade of 5 points out of 10. This Test will be carried out on the date that		B4	C26	
	appears in the schedule as final exam.				

Other comments on the Evaluation

The participation of the students in any of the acts of evaluation of the matter will imply the condition of presented/to and, therefore, the assignment of a qualification. Acts of evaluation are considered to be attendance at practical laboratory classes (three or more) and taking tests.

To pass the subject, students must have completed the practices of the subject and take the 2 tests of development questions. In these, it will be essential to achieve a minimum score of 5 points out of 10, in order to count the notes acquired in the follow-up of seminars, theoretical classes and in the practices carried out. Once all the scores have been taken into account, students must achieve a global grade of at least 5 out of 10 to pass the subject.

July call. Students who do not pass the subject at the end of the semester must take an assessment test during the July session. Said test will replace the results of the qualifying tests carried out throughout the semester and will have a value of up to 50%. The follow-up qualification of seminars and laboratory practices obtained throughout the semester is maintained.

The students who renounce the continuous evaluation have to chose the global evaluation of the subject. To pass the subject through the overall assessment, the student will take a comprehensive written test (80%) on specific aspects of the content explained in class, seminars and practices. Moreover, there will be a laboratory session (20%). In the written test it will be essential to achieve a minimum score of 5 points out of 10, in order to count the grade acquired in the laboratory practices, also with 5 point minimum. The global written test will be carried out on the official date of the exam for each evaluation opportunity within the official testing period marked in the academic calendar (1st opportunity (December-January) and 2nd opportunity (June-July). The laboratory session will be on the same day, but in the afetrnoon session if probe is at morning, and vice versa.

Methodologies	
	Description
Flipped Learning	Some learning activities will take place out of the classroom. Afterwards, in the classroom, with the presence of the teacher, other processes of knowledge acquisition and practice will be facilitated. Prior to the class sessions, a selection of materials (audiovisual, written etc.) will be available to the students, through the virtual classroom. This material must be employed for the preparation of the class session. Additionally, the students will be expected to carry out some simple tasks applying the concepts reviewed in the previously mentioned material. Detailed information and delivery terms for the tasks will be communicated by the teaching staff in advance. In the class session, different activities will be carried out in order to review, clarify and apply the studied concepts. Some of these activities will be handed for assessment.
Problem solving	Problem solving class sessions will be devoted to solving practical exercises applying the concepts developed in the flipped learning class sessions. The students will carry out individually some activities, that will be handed for assessment.
Collaborative Learning	In this methodology, the class will be organized in small groups, where the students will work collaboratively to develop academic tasks, applying the concepts studied and deepening their own learning.
Laboratory practical	Laboratory practical work will be directed to ensure that students are capable of handling chemical safely, evaluating any specific risks associated with their use and with the use of laboratory procedures, including their environmental repercussions. Laboratory experiments will be carried out, individually, in 3,5 h class sessions. The students will find, in advance, in the virtual classroom, the material needed for the preparation of the experiments. Work with this material could include performing and delivering some tasks, prior to the class session. During the experiments, students will elaborate a laboratory notebook recording all observations pertinent to the experiment. After completion of the experiment, students will complete the required work.

Personalized ass	istance		
Methodologies	Description		

Flipped Learning	During the preparation of the flipped learning sessions, besides using supporting bibliographic material, students will be tutored by the teaching staff. Tutoring sessions can take place in person or by telematic means (email, videoconference, forums in the virtual classroom etc.), by previous appointment. For tutoring sessions request see: https://quimica.uvigo.es/gl/docencia/profesorado/luis-munoz-lopez/
Problem solving	For preparation of the problem solving class sessions and/or to answer their questions, students will be tutored by the teaching staff. Tutoring sessions can take place in person or by telematic means (email, videoconference, forums in the virtual classroom etc.), by previous appointment. Assessment					
	Description	Qualification		ining a iing Re	
Flipped Learning	Participation and resolution by the student of the tasks proposed by the teaching staff in relation to the flipped learning sessions.		42 B: 45	C17	
Problem solving	As part of the continuous evaluation, participation and resolution by the student of the tasks proposed by the teaching staff in the class sessions will be evaluated.		42 B: 45	C17	D3
Collaborative Learning	As part of the continuous evaluation, students will carry out group assignments. Those will be application activities of knowledge and skills developed in the subject.		A2 B3 A5 B3 B3	2	D3
Laboratory practical	Assistance to practical classes is mandatory. Laboratory work will be evaluated as APT or NON APT. The following aspects will be considered: previous and/or subsequent work, development of the experimental work and laboratory notebook. In order to pass the subject, students must obtain an APT mark in the laboratory practical work.	0	Bź	2 C25	D3
Problem and/or exercise solving	Students must take a test covering contents of the first topics: 15% of the final qualification. A minimum mark of 3.0 points out of 10.0 must be achieved.		A2 B2 A5 B3	2 C17 3	D3
Problem and/or exercise solving	Students must take a test covering ALL THE CONTENTS OF THE SUBJECT: 25% of the final qualification. A minimum mark of 4.0 points out of 10.0 must be achieved.		A2 B2 A5 B3		D3
Problem and/or exercise solving	Students must take a written test regarding the experimental part of the subject: 15% of the final qualification. A minimum mark of 4.0 points out of 10.0 must be achieved.		A2 B2 A5 B3		D3

In this subject, BASIC learning results will be defined that will be necessary for the students to achieve in order to pass it.

In case of doubt about the acquisition of learning results by the students, additional oral evaluation tests may be carried out.

In order to pass the subject in January, it will be required:

- Achieve mention **APT** in the evaluation of the laboratory practical.
- Achieve a minimum mark of 3 points out of 10 in test 1.

• Achieve a **minimum mark of 4 points out of 10** in the global test and the written test for the experimental part.

If any of the previous conditions is not fulfilled, the final mark for the subject will be the mark obtained for the tests multiplied by 0.55 (55%).

• Achieve a minimum mark of 5.0 in the weighted addition of the marks for all the sections.

The final grade for the students who pass the subject could be standardized so that the highest mark can reach a value of up to 10 points.

STUDENTS OF 2ND AND SUBSEQUENT ENROLLMENT: Those students who were evaluated as APT during any previous course will be awarded the APT mention for the monitoring of the laboratory practical in the current academic course, not being necessary the completion of the experimental work again. However, they must take the written test for the experimental part in order to achieve the mark for the experimental part of the subject in the current academic course.

EVALUATION IN JULY: The marks obtained for the sections flipped learning, problem solving, collaborative learning and laboratory practical will be kept. Two tests can be retaken: a global test (40% of the final mark) **and/or** a written test for the experimental part (15% of the final mark). The student must achieve a minimum mark of 4 points out of 10 so that the results of these tests will be taken into account in the global mark of the subject.

The final mark will be the weighted addition of the marks for all the sections, as long as all the required minima are reached. If this is not the case, the final mark for the subject will be the mark obtained for the exams multiplied by 0.55 (55%).

GLOBAL EVALUATION OPTION: In order to pass the subject, students must carry out the laboratory practical work, achieving an APT mark, and a minimum mark of 5 out of 10 points in the written test for the experimental part (20% of the final mark). In addition, they must also obtain a minimum mark of 5 out of 10 points in a global exam (80% of the final mark).

Training and Learning Results

Code

A3 Students have the ability to gather and interpret relevant data (usually within their field of study) to inform judgments that include reflection on relevant social, scientific or ethical issues

A4 Students can communicate information, ideas, problems and solutions to both specialist and non-specialist audiences

A5 Students have developed those learning skills that are necessary for them to continue to undertake further study with a high degree of autonomy

B1 Ability for auronomous learning

B3 Ability to manage information

B4 Ability for analysis and synthesis

C1 Ability to know and understand essential facts, concepts, principles and theories related to Chemistry

C2 Use correctly chemical terminology, nomenclature, conversions and units

C3 Recognize and analyze chemical, qualitative and quantitative problems, proposing strategies to solve them through the evaluation, interpretation and synthesis of data and chemical information

C6 Know the basics and tools for resolution of analytical problems and characterization of chemical substances

C15 Know the main techniques of structural research, including spectroscopy

D1 Ability to solve problems

Methodologies	
	Description
Lecturing	The theoretical sessions will be devoted to present the fundaments of the techniques that are relevant to this subject
Problem solving	The sessions will br devoted to solve exercises or problems

Personalized assistance	
Methodologies	Description
Problem solving	Students will be able to consult with professors during the spring term

	Description	Qualification	Tra	ining and
			Learn	ing Results
Problem solving	In class students will be asked to solve a number of practical examples and exercises that will be graded.	20	A3	D1
Objective questions exam	There will be a test along the period of 2 h. of length that will include the Subjects 1-4.	40	A3 A4	D1
Objective questions exam	There will be a second test focused on MS, IR and NMR applied to the structural determination of organic compounds	40	A3 A4	D1

To surpass the matter the student has to:

- Achieve a 5 (out of 10) of average on all the graded activities.

- Achieve a minimum of 4 in each one of the exams of objective questions.

In the case of not achieving these two conditions the final grade will be the mean of the two exam

A student that enrolls in 20% of the total work scheduled will be qualified in accordance with the valid legislation. In any case, the realization of any of the tests will imply a final grade. The students that do not pass the subject at the end of the term will have the opportunity to do a final test in July. The grade of such test will replace the grades of the written tests (hence it will weigh 80% of the final grade of the student, no more)

Students who do not pass the subject at the end of the semester must take an overall written test in the final evaluation closing period in July. This test will replace the results of the written tests. The qualification of the seminar tests, deliverables (of the face-to-face activities) and the work/project, etc., are not recoverable.

For students who renounce continuous assessment and opt for a global assessment, the first of the short tests will be equivalent to 50% of the final mark, and the second to the remaining 50%. Students who do not pass one or both of the short tests that are carried out during the semester must take the corresponding part in the July session.

In order to guarantee a quality and individualized evaluation, any certifiable competence in this subject can be verified by means of an oral test, at any time before the final closing of the official records.

Training and Learning Results

Code

A1 Students can apply their knowledge and understanding in a manner that indicates a professional approach to their work or vocation, and have competences typically demonstrated through devising and sustaining arguments and solving problems within their field of study

A3 Students have the ability to gather and interpret relevant data (usually within their field of study) to inform judgments that include reflection on relevant social, scientific or ethical issues

B4 Ability for analysis and synthesis

C6 Know the basics and tools for resolution of analytical problems and characterization of chemical substances

C26 Perform correctly usual procedures in the laboratory, including the use of standard chemical instrumentation for synthetic and analytical work

D1 Ability to solve problems

Expected results from this subject						
Expected results from this subject			Training and Learning Results			
Choose the suitable instrumental analytical technique in function of the analyte to be determined and the characteristics of the sample.			C6			
Define, calculate and interpret the different quality parameters of an analytical method.		B4	C6			
Explain the fundamentals of the main optical methods of analysis and describe their relevant applications in the laboratories.	A1		C6			
Describe the interaction processes of the electromagnetic radiation with the matter, classify the optical methods and recognise the differences between the molecular and atomic spectrometry.			C6			
Distinguish the instrumentation of the modern spectroscopy techniques and their different components.			C6			
Select the suitable calibration method for any analytical problem posed and compute the experimental data to obtain the function of calibration.			C26	D1		
Apply the optical methods of analysis for the resolution of problems in different working areas.	A1 A3		C26			
Carry out correct mathematical calculations in the problem solving of the optical methods of analysis.	A1 A3	B4	C26	D1		

Contents

Topic

SUBJECT 1. Introduction to instrumental analytic methods.	alClassification of the instrumental analytical methods. Quality parameters of an instrumental method: Validation. Methods of calibration in instrumental analysis: external calibration, standard addition and internal standard. Characteristics of the calibration curves. Fitting and statistical parameters of calibration lines.
SUBJECT 2. Optical methods of analysis: generalities.	Electromagnetic spectrum. Phenomena of interaction between the electromagnetic radiation and the matter. Classification of the optical methods of analysis. Instrumental components and representative configurations of the different instruments. Signals and noise.
SUBJECT 3. UV-vis molecular absorption spectroscopy	Fundamentals of the UV-vis molecular absorption spectroscopy. Basic concepts. Lambert-Beer Law. Deviations of the Lambert-Beer law. Absorbent species. Types of instruments. Analytical methodology and applications.
SUBJECT 4. Luminescent techniques.	Fundamentals. Mechanisms of molecular deactivation. Fluorescence and Phosphorescence. Factors influencing the luminescence. Quenching of the fluorescence. Chemiluminescence and Bioluminescence. Instrumentation. Analytical methodology and applications.
SUBJECT 5. Infrared and Raman spectroscopy.	Fundamentals. Modes of molecular vibration. Infrared spectrum and molecular structure. Raman spectroscopy. Origin of the Raman spectra. Instrumentation. Methodology. Applications in qualitative, quantitative and structural analysis.
SUBJECT 6. Atomic absorption spectroscopy.	Fundamentals. Origin of atomic spectra. Flame atomizer. Atomization processes in flames. Graphite furnace atomizer. Thermal programs. Interferences. Instrumentation. Background correctors. Methods of vapor generation. Analytical methodology and applications. Atomic fluorescence spectrometry.
SUBJECT 7. Atomic emission spectroscopy and atomic mass spectrometry.	Fundamentals of atomic emission spectroscopy. Excitation sources and temperature effect. Flame emission spectrometry (flame photometry). Arc and spark emission spectrometry. Inductively-coupled plasma atomic emission spectrometry. Plasma source mass spectrometry. Comparative analytical characteristics of the main techniques for trace inorganic analysis.

Methodologies	
	Description
Problem solving	Problem solving will allow to reinforce the learning of theoretical contents explained during the masterclasses. Activities in these classes may comprise solving of numerical problems, handling of spreadsheets for calibration exercises, discussion of practical cases related with the optical methods of analysis and published in educational journals, etc. The teacher will propose different problems/exercises/questionnaires that will be solved by students and delivered for their evaluation.
Laboratory practical	In the lab sessions, student will learn to operate with the different instruments corresponding to atomic and molecular spectrometries, acquiring skills in the different stages of method development such as the preparation of standards, optimisation of instrumental parameters, calibration, etc. For this purpose, the teacher will provide the student with the scripts describing the theoretical foundations, objectives, instrumentation, reagents and operation procedure. Students will elaborate a lab notebook during the development of the hands-on experiments, in which they will reflect all the operations made, experimental data, calculations and conclusions reached. Those students that have overcome lab practices in the academic years 22-23 and 23-24 will not need to repeate them. In this case, the mark obtained in lab practices will be kept.
Lecturing	The teacher will explain in masterclasses the theoretical contents of the program with the support of slides provided through the learning platform moovi. Several questionnaires will be proposed to students for their self-evaluation.

Methodologies	Description
Lecturing	The teacher will resolve the doubts on any activity proposed (masterclasses, laboratory practices, problems/exercises solving) in a personalised way. To this end, the teacher will inforn students of the available tutorial schedule in the presentation of the subject.
Problem solving	The teacher will resolve the doubts on any activity proposed (masterclasses, laboratory practices, problems/exercises solving) in a personalised way. To this end, the teacher will inforn students of the available tutorial schedule in the presentation of the subject.
Laboratory practical	The teacher will resolve the doubts on any activity proposed (masterclasses, laboratory practices, problems/exercises solving) in a personalised way. To this end, the teacher will inforn students of the available tutorial schedule in the presentation of the subject.
Tests	Description
Report of practices, practicum and external practices	The teacher will resolve the doubts on any activity proposed (masterclasses, laboratory practices, problems/exercises solving) in a personalised way. To this end, the teacher will inform students of the available tutorial schedule in the presentation of the subject.

	Description	Qualification	Trainin	a and
		Quanneación	Learr Resu	ing
Laboratory practical	In lab sessions, a follow-up experimental work carried out by the student will be monitored (attitude and practical skills acquired) will be performed. Attendance at all laboratory sessions is compulsory (it is not possible to overcome the course without doing the practical sessions).		A3 B4 C	6 D 26
Essay questions exam	1st Examination: exam (subjects 1,2,3) of 2 hours of duration carried out approximately in the middle of the term and included in the course schedule. The test will have two parts, one of numerical problems/exercises and the other of multiple-choice questions.		A1 B4 C	6 D
Essay questions exam	2nd Examination: exam (subjects 4,5,6,7) of 2 hours of duration, to be held on a date approved by the Faculty Board, corresponding to the end of the term. The examination will have two parts, one of numerical problems/exercises and the other of multiple-choice questions.	30	A1 B4 C	6 D
Report of practices, practicum and external practices	Students will elaborate a lab report in which the experimental work will be reflected (preparation of standards, calibration of instruments, operation procedures, observations, results, etc.). The assessment will consider both formal issues and quality of the results.	10	A3 B4 C	26
Objective questions exam	At the end of the subjects corresponding to the theoretical program, students will perform a self-evaluation test (multiple choice questions) so as to strengthen the understanding of the contents.	10	C	6
Problem and/or exercise solving	Students will solve similar problems/exercises to those included in the problem/exercise sheets (deliverables). Likewise, deliverables of questionnaires posed in the discussion of different case studies will be requested. It will be necessary to accomplish a minimum number of deliverables established by the teacher so that the mark of this activity can be added to the rest of the assessment items.	5	A1 B4 C A3	6 D

Continuous assessment mode:

Considerations on the evaluation of the practical subjects:-Lab practices (hands-on work follow-up): lack of attendance, even if justified, will penalise the mark. A number of absences of more than 25% of the laboratory sessions will mean failing the lab practices. A minimum mark of 4 out of 10 will be required to be added to the rest of the evaluation elements. The completion of the lab practices and the lab report is essential to pass the course both in the continuous assessment mode and in the global assessment mode (non-continuous).-Lab report: it will be necessary to obtain a minimum grade of 4 points out of 10 in the Lab Report in order to be added to the rest of the evaluation elements.

Considerations on the evaluation of the tests (intermediate and end of term test):

The part of multiple-choice questions and the part of numerical problems/exercises will have a weight of 50% each in the two tests. In order to be able to average the theory part and the problems/exercises part, a minimum of 3 points out of 10 must be obtained in either part.

-A minimum score of 4 points out of 10 must be achieved in the first examination in order for it to be averaged with the second one. Students who have not achieved a grade of at least 4 points out of 10 in the first examination must take a recovery exam of the first part of the course (1 hour time) whose grade will replace the one obtained previously. This

recovery test will take place on the date scheduled for the 2nd examination The average of the two exams must be at least 4 points out of 10 in order to be added to the rest of the evaluation elements. If this minimum score is not reached, only the weighted grade of both exams will appear in the student grading reports.

Qualification in the 1st chance of the call (May-June):

-Once the above criteria have been taken into account, passing the course is achieved with an overall mark of 5 points out of 10.The student's participation in any of the assessement items with the exception of problem solving and/or exercises (deliverables) and self-assessment tests disqualifies him/her from obtaining the grade of NOT PRESENTED. The overall qualification in the first edition of the call will be made up of the marks obtained in the problem solving classes (deliverables) (1 point), self-assessment tests (1 point), hands-on work follow-up (1 point), Lab report (1 point), 1st examination (3 points) and 2nd examination (3 points).

Qualification in the 2nd chance of the call (July):

The qualification in this edition will be made up of two components:

1. Grades obtained by the student during the course:

Only the marks obtained by the student during the course in the lab practices (1 point) and the Lab report (1 point) will be retained.

2. Final exam on the contents of the subject (8 points).

This exam will include numerical problems/exercises and multiple-choice questions. A minimum grade of 4 out of 10 points will be required in this exam in order to be added to the grade obtained in the practicals.

Global assessment mode (not continuous):

-Students who wish to take this option must notify the subject coordinator in writing within one month of the start of the term. It is compulsory to complete the Lab practices/Lab report and a global assessment examination in order to pass the course.

-Lab practices/Lab report (2 points): the same considerations established above for continuous assessment will apply. -Global assessment examination (8 points): The exam will have two parts, one of numerical problems/exercises and the other of multiple-choice questions and will cover all the topics of the course, with the same considerations as those determined above for continuous assessment. Passing the subject requires an overall mark of 5 points out of 10. The date of this exam will coincide with the date of the final exam of the four-month period established for continuous assessment.

Evaluation of students in the Integrated Cycle of the Seniors Programme:

-Compulsory attendance to 80% of the theoretical and practical classes and seminars.

-Accomplishement of a theoretical-practical work on a subject of the course.

-Accomplishement of the self-assessment tests programmed through the e-learning platform.

 Description

 Lecturing
 Discussion of the fundamental aspects of each topic and description of those to be addressed in the seminars. Discussion of the specific issues raised by students. The student will be provided with the study material necessary to follow the lessons through the Moovi platform.

Problem solving	Resolution of numerical problems and theoretical questions as well as test-type exercises. Numerical and theoretical problems will be solved by the teacher with the participation of the students. The results will be analyzed and interpreted. On a voluntary basis, the student may solve some of these exercises in the seminar, with the assistance of the teacher and the participation of the rest of the students.
Laboratory practical	Every student is expected to perform a well balanced set of experiments which exemplifies and develops the fundamental topics. In principle, we expect the experiments to be carried out by couples of students for agility, but they may also be done individually, depending on the circumstances. Scripts describing every experiment, references to bibliographic material and instructions for the use of the devices if needed, as well as others related to laboratory safety, will be made available. The student must draw up the fugures and make the necessary calculations to obtain the final results, as well as analyze and discuss them.

Personalized assistance				
Methodologies	Description			
Lecturing	The student may raise specific questions in the lectures and more extensive ones in the teacher's tutoring schedule			
Problem solving	The solution to the proposed exercises will be discussed with students in connection with the development of the theoretical foundations. The additional questions students may raise will be answered during the teacher's tutoring schedule.			
Laboratory practical	The problems or doubts the students might have regarding the theoretical foundation of the experiments, their development and the key aspects of the calculations needed to obtain the result will be discussed during the practical sessions. Additional issues will be addressed in tutoring hours.			
Tests	Description			
Objective questions exam	Any doubts regarding the exams, in particular those related to their scope and configuration, shall be clarified. In the case of the short test, the solutions to the exercises will be briefly presented and discussed in the following seminar. During tutoring hours, the answers provided by the student will be discussed with him/her at his/her request; the time deadlines will be respected in the case of the exam (long-duration test).

Laboratory	Laboratory leasons are compulsory. Its experimental development is valued	15		B1 C16	D1
practical	as well as the presentation of a practice report. This must contain tables,			32 C27	
	graphs and the necessary calculations to obtain the results, as well as an		E	84 C28	
	analysis of the same, in relation to the experimental procedure and the				
	theoretical theories used.				
	The weight in the score is between the limits 0-15%)		_		
Objective	First short exam.	32.5	A1	C16	D1
questions exam	It will take place in the middle of the semester approximately. It will consist of solving questions and problems.			C28	
	If its mark reaches or surpasses 5 on the 10-point scale the corresponding				
	topics can be considered as passed.				
	Its weight, depending on the other sections of the evaluation, will be 35%.		_		
Objective	Second short exam.	32.5	A1	C16	D1
questions exam	It will take place at the end of the semester. It will consist of solving questions and problems.			C28	
	Its weight, depending on the other sections of the evaluation, will be 35%.				

To pass the subject it is necessary to pass the laboratory practices.

The qualification of each exam (and the average of them) must be at least 4.0 out of 10 so that an average can be made with the other sections.

Presenting any exercise, performing any practice or test makes it impossible for the qualification to be 'non qualified'.

General	It is a subject of six credits that is taught in the second	d semester of th	e second year ar	nd belongs to the module
description	of compulsory subjects of the Degree in Chemistry. Th	e objective of th	e subject is the	study of the metallic
	elements of the main groups (s and p blocks) and a br internal transition metals (f block).	ief introduction	to the study of t	ransition (d block) and

Training and Learning Results

Code

A2 Students have demonstrated knowledge and understanding in a field of study that builds upon their general secondary education, and is typically at a level that, whilst supported by advanced textbooks, includes some aspects that will be informed by knowledge of the forefront of their field of study

A3 Students have the ability to gather and interpret relevant data (usually within their field of study) to inform judgments that include reflection on relevant social, scientific or ethical issues

B1 Ability for auronomous learning

B3 Ability to manage information

B4 Ability for analysis and synthesis

C8 Know the characteristic properties of the elements and their compounds, including the relations between groups and their variations in the periodic table

C9 Know the structural aspects of chemical elements and their compounds, including stereochemistry

C26 Perform correctly usual procedures in the laboratory, including the use of standard chemical instrumentation for synthetic and analytical work

D2 Capacity for teamwork

Contents

Expected results from this subject				
Expected results from this subject	Tr	-) and Le Results	arning
Be able to foretell the properties of the metals depending on its position in the Periodic Table	A2 A3	B1 B3 B4	C8	
Be able to choose the general metal suitable for obtaining of the main group metals and their mor relevant compounds	reA2 A3	B1 B3 B4	C8 C9	
Be able to describe the structure and the more relevant reactivity of the main group metals and their compounds	A2 A3	B1 B3 B4	C8 C9	
Be able to deduce the physical properties of an element or compound from the type of bond and/o intermolecular forces	orA2 A3	B1 B3 B4	C8 C9	
Show capacity to relate the physical and chemical properties of any substances of interest with hi applications	s A2 A3	B1 B3 B4	C8 C9	
Be able to carry out in the laboratory to preparation of some elements and his compounds as well as the study of any of the their physical and chemical properties	A2 A3	B1 B3 B4	C8 C9 C26	D2

*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies	
	Description
Lecturing	Exposition by the teacher of the contents on the subject focusing on the most relevant aspects and those that are more difficult for students to understand. The classes will be developed interactively with the students, commenting on the online material (available on Moovi and the Internet) as well as the most appropriate bibliography for the in-depth preparation of each topic. Doubts that arise will be resolved.
Problem solving	Activity which formulated problem and / or exercises related to the course. The student should develop appropriate solutions or right through the exercise routines, application of formulas or algorithms, application processing procedures available information and interpretation of the results. It is often used to complement the lecture.
Laboratory practical	Realization under the supervision of the teaching staff but in an autonomous way, of practices of laboratory in sessions of 3.5 hours each. The students will have, through the virtual classroom, the necessary material for the previous preparation of the experiments. The work with said material, prior to the laboratory class session, may include the completion and delivery of tasks. During the development of the practices, each student will prepare a laboratory notebook, where they will write down all the information related to the experiment carried out (reactions, observations, results, etc). After completing the practice, students must complete the work indicated in each case. Those students who did them and be approved in the 2022-23 academic year, if desired. In this case, it will remain, in the part laboratory, the qualification achieved in its day.
Mentored work	Students will take the course "In-fórmate coa Biblio" available in Moovi.
	The grade achieved in this course will be the one that corresponds to this section.

Methodologies	Description
Lecturing	Throughout the teaching period, students will be able to consult their doubts both in face-to-face sessions and during tutorial hours, in the latter case, by appointment. The teaching team will inform of their availability with the tutorial schedules published on the Faculty's website. Additionally, the telematic communication channels with the students will be used (email, virtual classroom tools or the Moovi tele-teaching platform).
Laboratory practical	The teaching staff will attend to the students' queries related to the development of laboratory teaching, both in the practice sessions and before and after their delivery. The hours of attention to the students of the teaching staff of the subject will be available in the virtual classroom and through other channels established by the University.

Mentored work	Students must take the course "In-fórmate coa Biblio" whose estimated duration is 15 hours, which will be available to them on the Moovi telelearning platform. Students who obtain the grade "apto" will receive a certificate that can be counted for 15 hours of work for the recognition of ECTS credits. The grade obtained in this course will constitute the grade for this section.
Problem solving	The resolution of the proposed exercises will be discussed with the students and the results obtained will be analyzed in connection with the development of theoretical aspects. Additional questions that students may raise during the teacher's tutorial schedule will be answered.
Tests	Description
Essay questions exam	Throughout the teaching period, students will be able to consult their doubts both in face-to-face sessions and during tutorial hours, in the latter case, by appointment. The teaching team will inform of their availability with the tutorial schedules published on the Faculty's website. Additionally, the telematic communication channels with the students will be used (email, virtual classroom tools or the Moovi tele-teaching platform). During the exam, the student can ask the teacher for any clarifications he deems appropriate for the correct understanding of the questions asked.
Essay questions exam	Throughout the teaching period, students will be able to consult their doubts both in face-to-face sessions and during tutorial hours, in the latter case, by appointment. The teaching team will inform of their availability with the tutorial schedules published on the Faculty's website. Additionally, the telematic communication channels with the students will be used (email, virtual classroom tools or the Moovi tele-teaching platform). During the exam, the student can ask the teacher for any clarifications he deems appropriate for the correct understanding of the questions asked.

Assessment	Description	Qualification		rainir	20.2	nd
	Description	Qualification		Lear Res	ning	9
Problem solving	Each student will solve formulation exercises, questions and/or problems similar to those included in the bulletins. Deliveries of those exercises and/or questions raised in the different practical case studies that have been discussed both in the problem-solving classes and in the master classes will also be carried out.			B3 (B4 (D2
	The mark in the development questions exams must be equal to or greater than 5 out of 10, so that the qualification of this section can be added to the rest of the evaluation elements.	1	_			
Laboratory practical	In the laboratory sessions, a follow-up of the experimental work carried out by the students (attitude and acquired skills) will be carried out.			B3 (B4 (
	It is important to indicate that attendance at all laboratory sessions is MANDATORY. Lack of attendance, even if justified, will penalize the grade (in case of justified absences it is recommended to make up the session in another group). If the number of absences is greater than 25% of the laboratory sessions, it will mean failing the subject. Failure to achieve a grade equal to or greater than 5 in laboratory practices will also mean failing the subject.					
	The evaluation of these practical sessions will be based on the correct elaboration of the laboratory notebook, the behavior and the acquired skills. Students may also be asked to solve simple questions and/or exams that will be used for their evaluation.					
	The students who carried out and approved the practices in the previous course (2022-2023) are exempt from doing them this course if they wish. The note in this section will be kept.					
	The assessment of this section will be taken into account if the grade in the development questions exams is equal to or greater than 5 out of 10.					
Mentored work	The students must take the course "In-fórmate coa Biblio" whose estimated duration is 15 hours, which will be available to them on the Moovi telelearning platform.			B3 (B4 (D2
	Students who obtain the grade "apto" will receive a certificate that can be counted for 15 hours of work for the recognition of ECTS credits.					
	The grade obtained in this course will constitute the grade for this section.					
	This score will only be considered when calculating the final grade if a score equal to or greater than 5 points out of 10 is achieved in the development questions exams.		_			

Essay questions exam	Development questions exam On the date set in the official exam calendar of the Faculty, a written test will be carried out on the subject taught in chapters 1 to 5.	25	A2 B1 C8 A3 B3 C9 B4
	It is necessary to achieve a score equal to or greater than 5 out of 10 to pass the subject.		
Essay questions exam	Development questions exam On the date set in the official exam calendar of the Faculty, a written test will be carried out on the subject taught in chapters 6 to 11.	30	A2 B1 C8 A3 B3 C9 B4
	It is necessary to achieve a score equal to or greater than 5 out of 10 to pass the subject.		

Other comments on the Evaluation

First Opportunity (June-July)

Continuous assessment:In the case of not achieving the minimum grade required in any test to pass the subject, the final grade will reflect as closely as possible the actual grade obtained throughout the course. It is understood that a student has submitted to the evaluation of the subject and, therefore, a grade will be assigned, in the following cases:1. If you take an exam with development questions.2. If you participate in tests or continuous assessment activities beyond the deadlines established by the center for the request for global assessment modality. A minimum grade of 5 out of 10 is required to pass the subject.

Global assessment: The students who have been granted the global evaluation by the deanship will have an exam of development questions (75%) that will be carried out on the official exam date for each evaluation opportunity within the official testing period marked in the academic calendar of each course. A minimum score of 5 out of 10 is required in global exam and laboratorio Practical to pass the subject.

Evaluation of the students of the Integrated Cycle of the Senior Program:- Mandatory attendance at 80% of theoretical classes and seminars.- Completion of self-assessment problems, exercises or tests.- Completion of a project on a topic related to the subject.

Second opportunity (July): The same criteria will be followed as in the first opportunity.

Contents	
Торіс	
LESSON 1. Reactions of nucleophilic substitution on sp3 carbons	Bimolecular and unimolecular nucleophilic substitution reactions (SN2 and SN1): kinetic, mechanisms and stereochemistry. Competition between SN2 and SN1. Transformation of functional groups through SN2 and SN1 reactions.
LESSON 2. Reactions of elimination	Bimolecular elimination reaction (E2). Unimolecular elimination reaction (E1). Competition between substitution and elimination. Application of elimination reactions in organic synthesis.
LESSON 3. Reactions of nucleophilic addition to the carbonyl group	Structure and general reactivity of the carbonyl group (aldehydes and ketones). General mechanism of the nucleophilic addition. Addition of oxygenated and sulfur compounds, nitrogenated compounds, hydride, organometallic compounds, cyanide, and acetylides. The reaction of Wittig.
LESSON 4. Reactions of nucleophilic substitution on the carbonyl group	Structure and general reactivity of carboxylic acids and derivatives. Preparation and reactivity of acid halides, acid anhydrides, esters, and amides. Structure and reactivity of nitriles.
LESSON 5. Reactivity in alpha position of the carbonyl group	Enols and enolates: general reactivity. Keto-enol Tautomerism. Alpha- alquilación of enolates. Alpha-halogenation of enols and enolates. Reactions of enolate anions with carbonyl compounds (aldolic condensation).
LESSON 6. Reactivity of bifunctional carbonyl compounds	Reactions of beta-dicarbonyl compounds. Reactions of alpha-beta unsaturated carbonyl compounds. Michael reaction. Robinson annulation.
LABORATORY	In these sessions, experiments related to the theoretical content of the lessons will be carried out.

Planning			
	Class hours	Hours outside the classroom	Total hours
Lecturing	23	30	53
Problem solving	12	18	30
Mentored work	0	6	6
Laboratory practical	27	8	35
Objective questions exam	1	6	7
Problem and/or exercise solving	1	4	5
Problem and/or exercise solving	1	8	9
Problem and/or exercise solving	1	4	5
*The information in the planning table is fo	r guidance only and does no	ot take into account the hete	erogeneity of the students.

Methodologies	Description
	Description
Lecturing	The teaching staff will expose, in a structured way, those general aspects of the subject, paying special attention to those of greatest relevance to the program and the most difficult for students t assimilate. The teaching staff will provide, through the virtual classroom, the necessary material fo the realization of the personal work of the students. In the class session, activities will be carried out that can lead to qualifiable deliverables.
Problem solving	In this activity, a series of exercises and problems previously elaborated and proposed by the teacher will be resolved. The teacher will solve the doubts and will comment on the specific aspects. The students will carry out tasks individually that will be graded.
Mentored work	The students, grouped into teams, must work on a topic assigned by the teacher. This activity will be graded.
Laboratory practical	A series of experiments in the laboratory will be carried out in face-to-face sessions 3,5 h long. The students will have all the necessary material for the previous preparation of the experiments through the virtual classroom. During the laboratory sessions, the students will elaborate a laboratory notebook in which they will annotate all observations related to the experiments. After the development of the practices, the students will have to complete the work indicated in each case.

Personalized ass	sistance
Methodologies	Description

Lecturing	The teacher will attend to the queries of the students related to the study of the contents related to the subject through tutories. The teacher will also use channels of telematic communication with the students (email, tools of the virtual classroom). For consultation and/or request for tutorials: https://quimica.uvigo.eres/gl/docencia/profesorado/maria-magdalena-cid-fernandez/
Laboratory practical	Teachers will attend to the queries of the students related to the experiments during the laboratory sessions and in tutories. The schedule office hours will be available in the virtual classroom and through other ways established by the University. For consultation and/or request for tutorials: https://quimica.uvigo.es/gl/docencia/profesorado/maria-beatriz-iglesias-antelo/ https://quimica.uvigo.es/gl/docencia/profesorado/marta-teijeira-bautista/ https://quimica.uvigo.es/gl/docencia/profesorado/marta-teijeira-bautista/
Problem solving	Teachers will attend to the queries of the students related to the problems and exercises linked to the contents of the subject, through the schedules of tutories. The teacher will also employ channels of telematic communication with the students (email, tools of the virtual classroom). For consultation and/or request for tutorials: https://quimica.uvigo.eres/gl/docencia/profesorado/maria-magdalena-cid-fernandez/
Mentored work	The teaching staff will attend in a personalized way the queries of the students related to the group work. The tutoring sessions may be carried out in person or by telematic means under the modality of prior consultation. For consultation and/or request for tutorials: https://quimica.uvigo.eres/gl/docencia/profesorado/maria-magdalena-cid-fernandez/
Tests	Description
Objective questions exam	Teachers will attend to the queries of the students, during the schedules of tutories, which will be available in the virtual classroom and through other ways established by the University. The teacher will also employ channels of telematic communication with the students (email, tools of the virtual classroom). For consultation and/or request for tutorials: https://quimica.uvigo.es/gl/docencia/profesorado/maria-beatriz-iglesias-antelo/ https://quimica.uvigo.es/gl/docencia/profesorado/marta-teijeira-bautista/ https://quimica.uvigo.es/gl/docencia/profesorado/marta-teijeira-bautista/
Problem and/or exercise solving	Teachers will attend to the queries of the students, during the schedules of tutories, which will be available in the virtual classroom and through other ways established by the University. The teacher will also employ channels of telematic communication with the students (email, tools of the virtual classroom). For consultation and/or request for tutorials: https://quimica.uvigo.eres/gl/docencia/profesorado/maria-magdalena-cid-fernandez/ https://quimica.uvigo.es/gl/docencia/profesorado/maria-beatriz-iglesias-antelo/ https://quimica.uvigo.es/gl/docencia/profesorado/marta-teijeira-bautista/ https://quimica.uvigo.es/gl/docencia/profesorado/marta-teijeira-bautista/

Assessment			
	Description	Qualificatio	n Training and Learning Resul
Problem solving	The participation and resolution of the exercises proposed by the teache will be evaluated.		A1 B5 C17 D A5 C18 D
Mentored work	The students will work in groups. It will be an activity of application of the knowledges/skills developed in the subject.	e 10	A1 C17 D A5 C18
Laboratory practica	I The assistance to the practical classes of laboratory is compulsory. The work of laboratory will be evaluated as APT or NO APT. The following aspects will be evaluated: previous or later work, development of the experimental work and lab notebook. In order for the students to pass the subject, a qualification of APT in laboratory practices must be reached.	0	B5 C17 D C18 C26 C28
Objective questions exam	After the laboratory practical, the students will answer a questionnaire regarding the experimental part of the subject.	10	B5 C17 D C26 C28
Problem and/or exercise solving	A test of the contents of the first lessons, that will weight 15% of the fina mark.	l 15	A1 B5 C17 D A5 C18 D
Problem and/or exercise solving	A test of all the contents of the subject, that will weight 25 % of the final mark. A minimum score of 4.0 points out of 10.0 in this test will be demanded to pass the subject.	25	A1 B5 C17 D A5 C18 D
Problem and/or exercise solving	A written test related to the experimental part of the subject, that will weight 15% of the final mark. A minimum score of 4.0 points out of 10.0 will be demanded in this test.	15	B5 C17 D C18 C26 C28

Other comments on the Evaluation

Basic learning outcomes for this subject:

- Chemical language (functional groups; organic formulation and nomenclature; reaction and resonance arrows; curved arrows; resonance forms).
- Stereochemistry (representing 3D-structures; chair conformations; chiral centres; absolute and alkene configuration assignation).
- Basic reactivity (identifying acids, bases, nucleophiles and electrophiles; formal oxidation states; carbocations; cations and anions stability).
- Laboratory (determination of a reaction yield).

In case of doubt about the acquisition of the learning results by the students, additional oral assessment tests may be taken.

To pass the subject in June you will need:

- Achieve the mention of PASS in the evaluation of laboratory practices
- Achieve a minimum score of 4 points out of 10 in the global test
- Get a minimum score of 4 points out of 10 in the written test of the experimental part

If any of the above conditions is not met, the mark that will appear in the report will be the weighted mark of the tests.

Achieve a minimum score of 5.0 in the weighted sum of all sections.

The final grade of the student who passes the subject may be normalized so that the highest grade can reach a value of up to 10 points.

2nd AND SUBSEQUENT REGISTRATION STUDENTS: Students who have been evaluated with PASS in the laboratory work in a previous year will be awarded a PASS in the follow-up of the laboratory work in the current academic year. It is not needed to redo the experiments. However, they must carry out the questionnaire (10%) and the written test of the experimental part (15%) to obtain the corresponding qualification for the experimental part of the subject in the current academic year.

EVALUATION IN JULY: The grade obtained by the students during the course in the problem solving, mentored work, laboratory practical and laboratory questionnaire will be maintained. It will be possible to take a test of all the theoretical content of the subject that will mean 40% of the final grade and/or a written test of the experimental part that will mean 15% of the final grade.

It will be necessary to achieve a minimum of 4 points out of 10 in these tests to pass the subject and take into account the rest of the evaluation elements.

The final mark will be the weighted sum of all the sections, provided that the required minimums are reached. Otherwise, the score that will appear in the report will be the weighted score of the tests.

GLOBAL EVALUATION OPTION: To pass the subject, the student must carry out the laboratory practices, achieve a PASS grade in the work developed in the laboratory and a grade equal to or greater than 5 points out of 10 in the written test of the experimental part (20% of the final mark). In addition, it is neccesary to achieve at least 5 points out of 10 in a test in which all the contents of the subject will be evaluated (80% of the final grade).

Training and Learning Results

Code

A1 Students can apply their knowledge and understanding in a manner that indicates a professional approach to their work or vocation, and have competences typically demonstrated through devising and sustaining arguments and solving problems within their field of study

B4 Ability for analysis and synthesis

C3 Recognize and analyze chemical, qualitative and quantitative problems, proposing strategies to solve them through the evaluation, interpretation and synthesis of data and chemical information

C23 Know the principles and procedures of chemical engineering

D1 Ability to solve problems

Expected results from this subject

Contents	
Торіс	
Subject 1. Introduction to Chemical Engineering	Origin, concept and evolution of the Chemical Engineering. Discontinuous and continuous operation. Stationary and non stationary state. Cocurrent and countercurrent operations. Classification of the unit operations. Systems of units.
Subject 2. Mass and energy balances	General equation of balance. Mass balances in systems without chemical reaction in steady and non-steady state. Recycle, purge and bypass. Mass balances in systems with chemical reaction in steady and non-steady state. Energy balances. Energy balances in systems with chemical reaction in steady state.

Subject 3. Distillation	Vapour-liquid equilibria. Phase diagrams for binary mixes. Simple and flash distillation. Multistage distillation
Subject 4. Liquid-liquid extraction	Liquid-liquid equilibrium for binary and ternary systems: binodal curve and distribution coefficients. Liquid-liquid extraction in cocurrent and countercurrent contact.
Subject 5. Chemical reactors	Speed of reaction. Ideal reactors: batch stirred tank reactor, continuos stirred tank reactor and plug flow reactor
Subject 6. Heat transfer	Mechanisms of heat transfer. heat transfer through flat walls, cylindrical and spherical. Heat exchangers.

Problem and/or exercise solving	2	12	14
*The information in the planning table is f	or guidance only and does n	ot take into account the het	erogeneity of the students.

Methodologies	
	Description
Lecturing	During these classes (one hour per week) the teacher will explain the most relevant aspects of the subject. The students will have the available documentation on Moovi.
Problem solving	There will be a set of exercises of each subject available for the students. Some of these exercises will be solve in class and other ones will be solved by each student and presented to the teacher in order to be corrected.
Collaborative Learning	In some classes of resolution of problems will propose some problem so that they resolve it in groups reduced.
Autonomous problem solving	The students will have to solve some exercises and/or questions and they will have to present them to through the platform Moovi
Case studies	It will propose a global problem that cover the greater part of the contents of the subject that will have to resolve of individual form and deliver through the platform Moovi for its evaluation

Personalized assistance	
Methodologies	Description
Problem solving	In the assigned hours of tutoring the professor will solve any doubts regarding the subject
Collaborative Learning During the sessions of collaborative learning the professor will resolve the doubts the arise	
Autonomous problem solving	In the assigned hours of tutoring the professor will solve any doubts regarding the subject

Autonomous problem solving	The students will have to deliver, in the terms indicated, the	15		B4	С3	D1
	problems and activities proposed of each subject.					
Case studies	It will propose a global problem that cover the greater part of the contents of the subject	10	A1		C3 C23	D1
Objective questions exam	It will make a long proof of all the matter of the subject.	40	A1	Β4	C3 C23	D1
Problem and/or exercise solving	They will make two short proofs, one of the subjects 1 and 2 and another of the subjects 3 and 4.	30	A1	B4	C3 C23	D1

Other comments on the Evaluation

There will be two short written tests throughout the quarter that do not eliminate matter. At the date set by the centre, the

entire subject matter will be evaluated and a minimum of 3 out of 10 points must be reached to take account of the other evaluation elements. If the minimum grade is not reached, the final test note is the grade of the subject.

The different activities carried out in the classroom and autonomously by the students together account for 30% of the final grade. To overcome the subject it is essential to have a minimum score of 3.5 out of 10 points in these sections (collaborative learning, problem solving autonomously, case studies).

The participation of the student in some of the evaluation tests, the delivery of 20% or more of the work ordered by the teacher, implies the condition of "presented" and the assignment of a grade.

Second chance. There will be a long test of all the material that will make up 70% of the grade. The grades corresponding to the activities carried out in the classroom and autonomously obtained, by the students, throughout the course

 *The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies	
	Description
Lecturing	The master classes (55 min) aim to give a global and real vision of electroanalysis, both from organic and inorganic compounds, by direct measurement or prior separation of the analyte. Each one of the topics will be documented with scientific articles, the contents of which will serve to establish and expand the knowledge acquired in the theoretical classes, and with representative examples of the fundamental concepts that are collected in each topic. The teaching-learning methodology will be centered on the student, so the classes will be aimed at motivating / encouraging a high participation on the part of these in the classroom. Therefore, the classes will be developed in a very interactive with the students, using the didactic material for their development online, as well as the most appropriate bibliography. The use of ICTs (MooVi and My Moodle) will be the resource that allows the student to communicate with the teacher (in addition to e-mail and the tutorials) and their peers, at the same time being the source of information of immediate access for them. In the tele-teaching platform, they will be able to find the basic information and documentation on the subject being taught, the schedule of activities, the exercises proposals, practice guide, workshop planning and qualifications.
Seminars	After the lectures, the seminars will be dedicated to solving problems / exercises, in which it is intended to strengthen the level of understanding of the students in the topic under study. These problems / exercises, in principle, are worked on in class in small groups, then there is a general debate on them and later the student will have to solve them individually. The seminars aim to reinforce knowledge acquired in the theoretical classes. There will also be a discussion of practical cases and work scientists related to the contents of the subject.
Laboratory practical	The practical laboratory classes play a fundamental role in teaching the subject. On the one hand, they are essential for understanding the theories and concepts taught in the lessons; and on the other, they allow the student to be trained in the handling of analytical methodology, as well as norms and rules of scientific work, both at the level of group and individual work, including report writing. Ultimately, these are procedural objectives. The use of ICTs (MooVi and My Moodle) will be the resource that allows the student to communicate with the teacher and their colleagues, at the same time being the source of information of immediate access for them. In the tele-teaching platform, you will be able to find basic information and documentation on the subject that is taught, the agenda of activities, the proposed exercises, the practice guide, the workshop planning and qualifications.
Workshops	They would be part of the seminars and laboratory practices in which students must solve by themselves, under the teacher's supervision but with greater autonomy, assumptions real practicals of electrochemical processes, detection and determination of compounds of interest (pollutants, drugs, biomolecules, etc.) and design analytical strategies. Both in the seminars and workshops will monitor the personal work that is being carried out by the student at all times. Discussions will be held that will serve to solve problems real, as well as to expose complementary concepts, addressed or not in other subjects, but necessary in the approach to this problem. This task will be subject to the evolution of the student in the learning process.

Methodologies	Description
Lecturing	The tutoring program is configured as a study support element, where the student will have personalized academic assistance that results in a better use of the training and knowledge provided by the subject. In addition to face-to-face tutorials and / or via email, student work, individually or in groups, will also be tutored at through the MooVi Platform or through the remote campus.
Seminars	The tutoring program is configured as a study support element, where the student will have personalized academic assistance that results in a better use of the training and knowledge provided by the subject. Objective questions exam	There w seminar multiple evaluate evaluati	ill be a short test of objective questions on the topics covered in rs/workshops that may include theoretical-practical questions/problems or e choice. This test serves, at the same time, for the student to assess and e their study methodology. In order to compensate with the rest of the ion, a total final grade of 4/10 must be achieved (and a minimum grade of each part of the test).	10	A1 B5 C6 D1 A3 C13 C26
	be inclu Faculty			
Essay questions exam	MANDA ⁻ (5%), th develop order to	sponds to the official test (ordinary and/or extraordinary calls) and TORY for all enrolled students. It is made up of three parts: theoretical beoretical-practical (15%) and problems (15%) that integrates the oment of an analytical procedure and/or resolution of a practical case. In a compensate with the rest of the evaluation, a total final grade of 4/10 a achieved (and a minimum grade of 4/10 in each part of the test).	40	A1 B5 C6 D1 A3 C13 C26
		and time, as well as the classroom, will be public and the information will ded in the academic program of the center, previously approved by the Board.		
	theory/s evaluab the nece	/ATION: If there are several teachers involved in the subject (in seminars), the grade that the student must obtain in the part taught and ole by each teacher will have to be greater than or equal to 3.5/10, being essary requirement for the overall weighting of the exam to take place. Not g this qualification, the final result is fail.		

Report of practices, practicum an external practices	Upon the teacher's indication, the work team will prepare the practical reports (limited number of pages), which will reflect the work done in the laboratory by the adteam. Two models will be followed: scientific and technical. The fact of adjusting to the norms, the title proposal, layout, discussion of results, ability to synthesize the conclusions, etc. will be valued.	10	A1 B5 C6 D1 A3 C13 C26
	The scientific articles/technical reports handled in the practices will serve as a model. Taking as a model does not mean PLAGIARIASING, which will be penalized with a ZERO in the qualification of the reports. These reports, whether scientific or technical, must be delivered within the established period and will be corrected by the professor. A minimum grade of 4/10 must be achieved to qualify for the pass of the subject.		
Laboratory practice	A laboratory test will be practiced, at an individual level, which will allow the evaluation of the competencies and skills acquired by the student during the laboratory sessions. Said test will be carried out at the end of the laboratory sessions and is mandatory, and a minimum grade of 4/10 must be achieved to opt for the subject's approval.	10	A1 B5 C6 D1 A3 C13 C26

Other comments on the Evaluation

Please, pay attention: translated content from main language (*castellano*) using the translation tool of DocNet App.

A1 Students can apply their knowledge and understanding in a manner that indicates a professional approach to their work or vocation, and have competences typically demonstrated through devising and sustaining arguments and solving problems within their field of study

A5 Students have developed those learning skills that are necessary for them to continue to undertake further study with a high degree of autonomy

B1 Ability for auronomous learning

B2 Organization and planning capacity

B4 Ability for analysis and synthesis

C1 Ability to know and understand essential facts, concepts, principles and theories related to Chemistry

- C4 Use computer tools properly to obtain information, process data, perform computational calculations and calculate matter properties
- C14 To know the principles of quantum mechanics and its application in the description of the structure and properties of atoms and molecules
- D1 Ability to solve problems

*The information in the planning table	is for guidance only and does no	t take into account the het	erogeneity of the students.

Description

Lecturing	The professor will expose the concepts, methods and main knowledges of each subject. It will orient the autonomous work of the student marking objectives and proposing questions and/or exercises. In the classroom the student has to pay attention to the exposiition, take his/her notes and formulate the questions that he/she considers. In the autonomous work the student has to complete the elements of the subject that remained as autonomous work, resolve the questions that have been proposed, assimilate this information and, if necessary, elaborate new questions to formulate to the professor in next sessions or in tutorials.
Problem solving	The professor will resolve the exercises that he considers fundamental in each subject. Problems for autonomous resolution will be proposed to students. The participation of the students will be motivated, thus, in part of the sessions the students are those who resolve the problems. Students have to assist to these classes with participatory spirit, procuring to understand the resolution of the exercises and connect it with the knowledges purchased in theory. Modelling of problems and its mechanical resolution should be avoided. In the autonomous work the student has to solve the problems proposed and even look for other related.
Laboratory practical	The professors will propose exercises, longer than those usual in problem solving lectures. In its majority the problems will be solved with computers. The students will obtain results to the exercises proposed. In the autonomous work thye will have to analyse the results obtained. It is always important that they relate the work made with that studied in lecturing.

Personalized assistance

Essay questions exam

Assessment					
	Description	Qualification	Trai Learni	ning a ng Re	
Problem solv	ing In each subject or group of subjects will open a control of evaluation that the students will have to resolve in an interval of time. These controls will be able to contain short questions or of development and numerical problems.	10	A1 B2 A5	C1 C4 C14	D1
Laboratory practical	The systematic observation of the work made and the answer to the questions of the professors will be valued. Besides they will make , at least, 2 you control type test, one face-to-face (in final examination) and another/*s telematic/*s. Obtain at least 4 on 10 in the practical is indispensable requirement to approve the subject. In case of not reaching the 4 on 10 in this part of the subject the global qualification will not be able to exceed 4,0 on 10 points.	5 15	A1 B1 A5 B2 B4		D1
Essay questio	onsDuring the course will make the following examinations: to) A partial proof that will include, probably, the subjects 1, 2 and 3.	35	A1 B1 A5 B2 B4	C14	D1
Essay questio	ons*b) A final examination, with two opportunities, in the dates that fix the Faculty: December/January the first and June/July the second. East will include at the earliest opportunity the subjects 4, 5, 6 and 7, except so that those students that have opted by global evaluation. In the second opportunity (except exceptional cases) this examination will comprise all the matter of the course.		A1 B1 A5 B2 B4		D1

Other comments on the Evaluation

Rule 1: To be able to surpass the matter is indispensable requirement have made satisfactorily the practices. For this requires : a) have assisted to all the sessions of practices or present a certificate that to trial of the professors accredit a reason justified to be missing to a maximum of 1 session; b) reach a punctuation of 4,0 to trial of the professor commissioned. If they do not fulfil both requirements the global qualification will not be able to exceed 4,0 points.

Rule 2: In each examination (was partial or final) will include theoretical questions and numerical problems. To surpass the examination, in addition to a global qualification of 5,0 points, will be necessary to obtain a minimum punctuation of 4,0 points on 10 in the theoretical questions and of 3,0 points on 10 in the numerical problems. In contrary case the global

qualification of the examination never will be able to be upper to 4,0 points.

Rule 3. The students that, fulfilling rule 2, reach an equal or upper punctuation to 4,5 on 10 points in the partial proof will be able to present to the first opportunity of the final examination answering only the exercises and questions related with the no included subjects in the partial examination. This option will have to be indicated to the professor when beginning the final examination. When exercising this option the global qualification of the examinations will obtain valuing with coefficient 35/75 the first examination and 40/75 the second.

Rule 4. In case to verify the previous norms, the global qualification of the matter will be the highest of: a) that obtained in the examination (or group of examinations using the norm 3);and b) the resultant to apply the following weighting: resolution of exercises 10%, practices of laboratory 15%, examination/s 75%.

Rule 5. They will not validate practices approved in past courses neither in this course neither in the following.

Rule 6. It is not contemplated to keep approved parts of the subject between different academic courses.

Rule 7. During the process of qualification, professors will be able to require that, in personal interview, the student clear any doubt that affect to the correct qualification of any one of his examinations. This procedure will apply for cases of not readable, presumption of copy, or other problems that professors consider that they can solve of this way.

Rule 8. The detection of any type of copy will suppose the expulsion of the examination and the qualification of zero, that will be applied to this opportunity and to the following of this course.

Methodologies	
	Description
Seminars	The seminar classes will be dedicated to the resolution of practical cases related with the subject as well as to the resolution of doubts or questions that arose in the development of each subject. It is also contemplated to carry out seminars in which aspects not taught in previous subjects but necessary for the course of the course will be addressed.
Laboratory practical	The laboratory practices will consist of 4 sessions of 3.5 hours attendance. The students will carry out different experiences in the laboratory and must make the corresponding laboratory book. Some of the experiences may require the previous study individually or by group.
Lecturing	In the theoretical kinds will present the fundamental aspects of the subjects

Methodologies	Description
Seminars	During all the teaching period them/the students will be able to consult all type of doubts of the subject in schedule of tutorships or previous appointment.
Laboratory practical	The students will be able to consult to professors all type of doubts of the work in the practices of laboratory
Lecturing	During all the teaching period them/the students will be able to consult all type of doubts of the subject in schedule of tutorships or previous appointment.

Assessment

Description

Seminars	In the seminar sessions, students may be asked to solve simple questions that they must deliver at that time and that will serve for their evaluation. The score will only be taken into account if the score obtained in the global test is equal to or greater than 3 points out of 10.	15	C7 C15
Laboratory practical	The evaluation in the laboratory practices will have 10% regarding the laboratory notebook (it can be through a written test) and 5% to the behavior and skills by direct observation of the teacher. Students may also be asked to solve simple questions that they must deliver at that time and that will serve for their evaluation.	15	A2 C26 D2 A3
Lecturing	In the lecturing sesions, Students may also be asked to solve simple questions that they must deliver at that time and that will serve for their evaluation. The score will only be taken into account if the score obtained in the global test is equal to or greater than 3 points out of 10.	5	A3 B3 C7 B4 C15
Objective questions exam	There will be two short tests (1 hour) where the skills acquired at the time will be evaluated. The date and time of completion will appear in the academic schedule approved by the corresponding Faculty Board.	30	C7 C15
Objective questions exam	There will be a final test in which an overall evaluation of the subject will be made. The date and time of completion will appear in the academic schedule approved by the corresponding Faculty Board.	35	C7 C15 C26

Other comments on the Evaluation

Conditions that affect any type of evaluation:

- All written tests will include a set of questions on nomenclature and formulating simple inorganic compounds. If you do not achieve 90% of correct answers, the qualification of the corresponding test will not be considered in the corresponding evaluation.
- You can be requested, in person, from the student, the clarifications he deems appropriate regarding his/her answers in any of the written tests. Your answers may be considered in the evaluation of the test and modify its qualification.
- Laboratory practices are of an experimental nature and compulsory attendance at all sessions (Article 14 of the Regulation on Evaluation, Qualification and Quality of Teaching and the Student Learning Process of the University of Vigo). The evaluation of experimental skills will be carried out in the compulsory attendance sessions.
- The final grade of the students, if it is higher than 7 points out of 10, may be normalized so that the highest grade can be up to 10 points.

Conditions to qualify for **continuous evaluation**:

- Attendance at theoretical classes and seminars (Article 13 Evaluation regulation) and laboratory practices is mandatory
- The teacher must have a minimum of 80% of the deliverables proposed in the different face-to-face activities (exercises in theoretical classes and seminars or autonomous work exercises) in time and form at the end of the course.
- It is also mandatory for the student to take all the written tests planned to pass the subject.
- Failure to comply with any of these conditions implies the loss of the right to continuous evaluation.

Development of continuous evaluation:

- The specific competences of the subject related to the competences of the degree (CE7, CE15 and CE26) will be explicitly evaluated in exercises in the classroom and written tests. The basic, general and transversal competences will be evaluated implicitly in the qualification of the exercises.
- A score greater than or equal to 30% of the total value will be required in each of the written tests (short and final) and in the total sum of the grades of the deliverables, as well as 50% of the laboratory practices, so that the final grade has taking into account the rest of the evaluation elements (deliverables and short tests).
- In the case of not achieving any of the minimums, the report will include the weighted result of the tests and qualified exercises in which the criterion was achieved.
- Students who do not pass the subject at the end of the semester must take a written test in the closing period of the final evaluation in July. This test will have a value of 35% of the grade and will replace the results of the test at the end of the semester.
- The qualification of the deliverables (of the classroom activities) and short tests are not recoverable.

Global assessment

1) For non-compliance with the conditions for continuous evaluation of the conditions for continuous assessment are not met, the student may take a test at the end of the semester where he/she must solve questions related to all the specific skills of the subject. If you have passed the CE26 competency (relating to laboratory practices) in the same course, this will be considered passed.2) Within the period determined by the Faculty of Chemistry, the student may request the overall assessment.

Respect for the final test:

It will be written and in each question, the learning outcome competence that is being evaluated will be identified. In that case:

- It will be necessary to obtain a minimum of 3 points out of 10 on average in the evaluation in those related to the CE7 and CE15 skills and 5 in those related to the CE26 skill (laboratory work skills) to pass the subject
- It will be necessary to obtain an overall grade equal to or higher than 5 out of 10 in that test to pass the subject and, in no case will the previous grades obtained during the semester be taken into account
- This test will be different in extension to the one carried out by those who opt for continuous evaluation, although it will be carried out on the same date.

Contents	
Торіс	
1. Reaction mechanisms	 1.1. Reaction mechanism. Reaction profiles and transition state theory.
	1.2. Reaction driving force. Frontier orbital theory.
	1.3. Types of selectivity in organic transformations.
	1.4. Mechanism classifications.
2. Radical reactions	2.1. Homolytic vs. heterolytic bond breaking.
	2.2. Radical stability.
	2.3. Chain reactions, alkane halogenation.
	2.4. Radical polymerizations.
	Radical reductions and reductive couplings.
	2.6. Radical reactions in nature.
3. Pericyclic reactions	3.1. Woodward-Hoffmann rules. Orbital symmetry conservation and
	transition state aromaticity. Thermal and photochemical allowed and
	forbidden reactions.
	3.2. Electrocyclizations.
	3.3. Cycloadditions. Frontier orbital theory.
	3.4. Sigmatropic and ene reactions.
4. Photochemical reactions	4.1. UV/vis spectra of organic molecules. Properties of excited states.
	4.2. Photophysical processes: unimolecular deactivation, internal
	conversion, intersystem crossing, emission (fluorescence,
	phosphorescence).
	4.3. Double bond isomerizations.
	4.4. Photodissociations.
	4.5. Photoreductions.
	4.6. Pericyclic reactions.
	4.7. Photochemical reactions in nature.
5. Laboratory work	Practical work on experiments related to the previous sections of the
	course. Synthesis, purification and characterization of organic compounds
6. Molecular modeling	Use of computational chemistry tools to study the properties of organic
-	molecules and reaction mechanisms associated to the previous sections o
	the course.

Planning			
	Class hours	Hours outside the classroom	Total hours

Problem solving	24	44	68
Laboratory practical	28	10	38
Mentored work	0	8	8
Problem and/or exercise solving	2	0	2
*The information in the planning table is fo	r guidance only and does no	ot take into account the hete	erogeneity of the students.

Methodologies	
	Description
Introductory activities	Presentation of the course and instructors. Review of the syllabus and the structure of the course in the remote learning platform.
Flipped Learning	The interaction of the students with the materials available in the remote learning platform is expected, as is working on the activities proposed to prepare for class. Classroom time will be used to consolidate, review, clarify and apply the studied concepts.
Problem solving	Practical exercises and problems will be solved to apply the concepts developed in the flipped classroom sessions.

Laboratory practical	The students will perform in the laboratory basic techniques related to the synthesis, separation, purification and structural characterization of organic compounds. The work includes evaluation of risk, experiment planning and analysis of results. Molecular modeling techniques will be used to study the properties of organic compounds and selected reaction mechanisms. To be allowed in the laboratory, the student is required to perform a set of preliminary preparation tasks on the remote learning platform. The work will be carried out individually in 3.5 h sessions, and will be documented in a laboratory notebook.
Mentored work	After the practical sessions, a paper will be prepared according to the instructions of the professors.

Methodologies	Description
Flipped Learning	Continuous evaluation provides both instructors and students with feedback about the evolution of student learning and students' strengths and weaknesses. Although instructors can set tutorial appointments for students they deem at risk, it is expected that the students will take responsibility for they own learning and ask for help when needed. Students can request personalized support from the instructors at any time along the course, in order to solve any problem related to the subject, to review difficult concepts or to ask for help with the assignments. Tutorial sessions can be held through office hours in person or online, using the virtual campus. Personalized attention will also be provided through e-mail or the forums in the remote learning platform.
Problem solving	Problem-solving sessions in small groups facilitates personalized support to the student as soon as difficulties arise. As in the previous section, personalized attention will be provided in office hours, as well as through e-mail or forums in the remote learning platform.
Laboratory practical	In the laboratory sessions, most individual problems will be solved in class. As in the previous section, personalized attention will be provided in office hours, as well as through e-mail or forums in the remote learning platform.
Mentored work	

	Description	Qualification	Training and Learning
Flipped Learnin	gStudents must participate in class activities and interact with the contents planned in the online learning platform. The results of the tests and other	10	Results A3 B3 C18 D3 A4 B4 C19
	online activities integrated in every lesson in the platform will be evaluated.		A4 D4 C19
Problem solving	Students must solve short questions, problems and exercises, actively participating in the seminar sessions and completing them with independent work. A series of assignments will be graded. The grading will take into account the correctness of the provided answers, the quality of argumentation and the presentation of the results.	15 t	A3 B3 C18 D: A4 B4 C19
Laboratory practical	The competencies associated to the safe handling of chemicals, the assessment of risks in the laboratory and the planning and execution of experiments (both computational and in the laboratory) and the analysis of results, will be evaluated. For this, we will use the systematic observation of the student's work, the preliminary work, previous to the laboratory sessions, and the quality of the laboratory notebook and the assigned report. The laboratory work will get a PASS/FAIL grade.	10	
	Attendance to laboratory sessions and a PASS grade in them is needed to pass this course.		
	10% of the final grade is associated to an assignment related to the practical sessions.		
Mentored work	The students will work on the elaboration of documents in different formats, associated to the contents of the course.	10	-

Problem and/or
exercise solvingThere will be three exams, involving problems and exercises:55A3 B3 C18 D3
A4 B4 C19
C27
C281. A test about the first sections of the subject (2 hours), associated to a 15% of
the final grade.55A3 B3 C18 D3
A4 B4 C19
C27
C282. A test about all the contents covered in the class (2 hours), associated to a
40% of the final grade. A minimum grade of 4.0 out of 10 is required for a
global passing grade.56A3 B3 C18 D3
A4 B4 C19
C27
C283. A written exam (0.5 hours) related to the experimental part of the subject,
associated to a 10% of the final grade. A 4.0 grade (out of 10) in this test is
required for a global passing grade.56

Other comments on the Evaluation

Students need to demonstrate complete mastery of a set of essential learning outcomes in order to pass the course.

In case there is doubt about the mastery of the course's learning outcomes by any student, further or complementary oral tests can be scheduled for a sound evaluation.

Student participation in any of the graded activities will result in the assignment of a grade in this course (the student will be considered "presentado"). Attendance to laboratory sessions, participation in exams and the handing out of assignments are considered graded activities in this context.

Students who have attended the course in previous academic years: Those evaluated with a PASS grade in the experimental part of the course, upon request, will be awarded a PASS grade in this part of the course this year. As a result, their attendance to the laboratory sessions will not be required. However, assignments and the written test associated to the experimental part are required to achieve the grades associated to the experimental contents of the course this year (20%).

In the 2^a Edición de la Convocatoria Ordinaria, the grades obtained by the student in the problem solving, flipped learning and laboratory practical parts will be kept. An exam covering all the theoretical contents of the subject will be proposed, with a qualification that will represent a 45% of the final grade. A written test covering the experimental work will also be administered, with a contribution of 10% to the final grade. A minimum grade of 4.0 out of 10 in each of these two tests is needed for a passing grade and the consideration of the other grading elements.

The students desiring to opt-out of the continuous evaluation mode, need to attend the laboratory sessions and obtain a PASS in them, as well as obtaining a grade equal or higher than 5 out of 10 in the written test associated to the experimental part of the class (20% of the grade). On top of that, a grade equal or higher to 5 out of 10 is needed in a written exam covering all the contents of the course (80% of the grade).

Subjects that continue the syllabus

an of info

Organic Chemistry IV: Design of Organic Synthesis/V11G201V01310

Physical Chemistry III: Quantum Chemistry/V11G201V01303

Subjects that it is recommended to have taken before

Structural Determination/V11G201V01206 Organic chemistry I/V11G201V01205 Organic chemistry II/V11G201V01210

Other comments

In this class, the student is expected to learn how to deftly manipulate a relevant number of new concepts in a short period of time. As a result, daily work and study is a must. The same applies to class attendance and active participation in all the proposed activities, including interaction with the materials available in the online platform or the reading of the designated documents before every in person session.

It is strongly advised to have passed Organic Chemistry I and II and Structural Determination or equivalent, since the concepts learnt in these classes will be required in this one.

The use of molecular models is heavily recommended, as one of the main difficulties of this course is the visualization of the three-dimensional structure of molecules.

A laboratory coat and notebook is needed for the laboratory sessions.

Code

A1	Que os estudantes saiban aplicar os seus coñecementos ó seu traballo ou vocación dunha forma profesional e posúan
	as competencias que adoitan demostrarse por medio da elaboración e defensa de argumentos e a resolución de
	problemas dentro da súa área de estudo

- A4 Que os estudantes poidan transmitir información, ideas, problemas e solución a un público tanto especializado coma non especializado
- B5 Capacidade de adaptarse a novas situacións e adoptar decisións
- C6 Coñecer os fundamentos e ferrramentas habituais na resolución de problemas analíticos e na caracterización de substancias químicas
- C26 Levar a cabo correctamente procedementos habituais no laboratorio, incluíndo o uso de instrumentación química estándar para o traballo sintético e analítico
- D1 Capacidade para resolver problemas

Metodoloxía docente	
	Description
Lección maxistral	As clases maxistrais teñen unha duración de 50 minutos pretenden dar unha visión global e a nivel *introductorio sobre as técnicas de separación e a súa aplicación na análise. Os temas abordados nas clases teóricas poden estar acompañados de artigos científicos que poderán servir para ampliar os coñecementos abordados na clase teórica. A plataforma *Moodle utilizarase como ferramenta e recurso de comunicación entre o alumnado e os docentes.
Seminario	O obxectivo que se pretende alcanzar coa esta actividade pedagóxica é asentar os coñecementos e ampliar as competencias adquiridas nas clases maxistrais, explorando. Tanto nos seminarios, talleres como actividades de laboratorio farase un seguimento do traballo individual e/ou colectivo que estea a realizar os estudantes. Os estudantes disporán dos medios facilitados para dita atención personalizada (*tutorías presenciais, foros na plataforma *Moodle, correo electrónico, etc.).
Prácticas de laboratorio	As sesións de laboratorio están orientadas á aprendizaxe dunha serie de técnicas *cromatográficas que permitan a identificación e cuantificación de *analitos en diferentes matrices (contaminantes ambientais e alimentos, aditivos en alimentos, residuos farmacéuticos, etc.). A partir de experimentos de laboratorio preténdese aproximar os conceptos das clases maxistrais e casos prácticos dos seminarios á actividade práctica de laboratorio. Os estudantes deberán, de forma autónoma e en grupo, ser capaces de planificar e executar a actividade de laboratorio. A execución dos experimentos deberá ir acompañada con análises e organización datos. Cálculos, interpretación e discusión dos mesmos. Redacción adecuada e apropiada dos experimentos realizados.
Obradoiro	Formarían parte dunha actividade non presencial complementaria ás clases maxistrais, seminarios e de laboratorio. Os estudantes deberán resolver por si mesmos de forma autónoma, individualmente e/ou en grupos, un traballo de investigación e/ou *monografía escrito de temas relacionados cos contidos da materia.

A plataforma *Moodle utilizarase como ferramenta e recurso de comunicación entre o alumnado e os docentes.
Seminario	O obxectivo que se pretende alcanzar coa esta actividade pedagóxica é asentar os coñecementos e ampliar as competencias adquiridas nas clases maxistrais, explorando Tanto nos seminarios, talleres como actividades de laboratorio farase un seguimento do traballo individual e/ou colectivo que estea a realizar os estudantes. Os estudantes disporán dos medios facilitados para dita atención personalizada (*tutorías presenciais, foros na plataforma *Moodle, correo electrónico, etc.).

Prácticas de laboratorio As sesións de laboratorio están orientadas á aprendizaxe dunha serie de técnicas *cromatográficas que permitan a identificación e cuantificación de *analitos en diferentes matrices (contaminantes ambientais e alimentos, aditivos en alimentos, residuos farmacéuticos, etc.). A partir de experimentos de laboratorio preténdese aproximar os conceptos das clases maxistrais e casos prácticos dos seminarios á actividade práctica de laboratorio. Os estudantes deberán, de forma autónoma e en grupo, ser capaces de planificar e executar a actividade de laboratorio. A execución dos experimentos deberá ir acompañada con análises e organización datos. Cálculos, interpretación e discusión dos mesmos. Redacción adecuada e apropiada dos experimentos realizados.

Tests	Description
Resolución de problemas e/ou exercicios	Formarían parte dunha actividade complementaria ás clases maxistrais, seminarios e de laboratorio. Os estudantes deberán resolver por si mesmos de forma autónoma, individualmente e/ou en grupos, exercicios prácticos relacionados cos contidos da materia.
	O exame das preguntas de desenvolvemento terá unha duración máxima de tres horas. Nela incluiranse preguntas relacionados cos temas impartidos na materia.

	Description	Qualification	Trainir Lear Res	ning	g
Seminario	Realizarase un seguimento do traballo individual e/ou colectivo desenvolvido polos estudantes, os cales disporán dos medios facilitados para unha atención personalizada (*tutorías presenciais, foros na plataforma *Moodle, correo electrónico, etc.). A nota mínima a alcanzar neste apartado deberá ser de 4 puntos (nunha cualificación global sobre 10)		A1 C	6	D1
Prácticas de laboratori	o Realizarase un seguimento do traballo individual e/ou colectivo do traballo desenvolvido en lle laboratorio podendo requirirse a presentación dun informe ou resolución de cuestións expostas no Laboratorio. A nota mínima a alcanzar neste apartado deberá ser de 4 puntos (nunha cualificación global sobre 10)	15	A1 C C	6 26	D1
Resolución de problemas e/ou exercicios	Realizarase unha proba curta dunha hora de duración con data establecida no *cronograma definido pola Facultade. É unha proba de carácter non *eliminatorio e permite ao alumno facer o seu seguimento de estudo na materia. Os seus contidos estarán relacionados coa materia impartida na materia.	20	A1 C	6	D1
Exame de preguntas de desenvolvemento	O exame (proba longa), estará constituída por contidos impartidos nas clases maxistrais, actividades desenvolvidas nos seminarios, talleres e laboratorio. Terá a duración de tres horas. É requisito alcanzar un valor mínimo de 4 puntos (nunha cualificación global sobre 10)		A1 B5 C A4 C	6 26	D1

Other comments on the Evaluation

Dado que las actividades de formación y evaluación continua programadas dentro de las Prácticas de Laboratorio y del Estudio de casos (incluida en el seguimiento de la actividad de seminarios) están diseñadas para formar al alumnado en habilidades y competencias directamente relacionadas con el ejercicio de la profesión en el campo del Análisis Químico, por ello la asistencia y participación del alumnado en ambas actividades evaluables es OBLIGATORIA, de tal manera que la ausencia o no realización injustificada de estas actividades impedirá superar la materia. Por lo tanto, considerando el carácter teórico-práctico de la asignatura y los resultados de formación y aprendizaje que se persiguen alcanzar con ambas metodologías, el alumnado que opte por la Modalidad de Evaluación Global Final también deberá realizar OBLIGATORIAMENTE estas actividades.

Para SUPERAR la materia será necesario alcanzar una calificación GLOBAL FINAL de 5,0 (sobre 10), una vez sumadas las calificaciones ponderadas obtenidas en las componentes evaluables de la asignatura y descritas con detalle en esta sección de evaluación. Muy Importante, PARA PODER SUPERAR LA MATERIA (poder sumar las calificaciones obtenidas en cada actividad evaluable), es OBLIGATORIO alcanzar una nota mínima de 4,0 (sobre 10) en cada una de las actividades evaluables mencionadas anteriormente (Pruebas cortas, Prueba final, Prácticas de laboratorio y Seminarios). Los alumnos que no cumplan este requisito en la primera oportunidad, serán calificados en el acta con la nota más alta alcanzada en las partes suspensas, y deberán repetir en la segunda oportunidad (convocatoria de Julio) la prueba relativa a la parte o partes en las que no hayan alcanzado el 4,0. Lógicamente, los alumnos que se encuentren en esta situación conservarán la nota de la/s parte/s superada/s (≥4,0) en primera oportunidad.

En la segunda oportunidad de evaluación, tal como fue ya descrito, es OBLIGATORIO alcanzar como mínimo una calificación de 4.0 (sobre 10) en todas las partes objeto de recuperación.

Los alumnos que optan por la modalidad evaluación global final, deberán tener en cuenta que las actividades de contenido práctico (seminarios y Prácticas de laboratorio) son de carácter obligatorio, por lo que la evaluación de dichas actividades, se realizará independientemente de la evaluación final.

ATENCIÓN: El alumno que desee optar por la modalidad EVALUACIÓN FINAL deberá informar y entregar un documento escrito y firmado a los docentes responsables de la materia durante las dos primeras semanas desde el inicio de la docencia de la materia correspondiente.

En la presentación de la materia, así como en la pagina de la Facultad de Química disponen de las fechas para las actividades de evaluación.

Training and Learning Results

Code

Students can apply their knowledge and understanding in a manner that indicates a professional approach to their work
or vocation, and have competences typically demonstrated through devising and sustaining arguments and solving
problems within their field of study

- A5 Students have developed those learning skills that are necessary for them to continue to undertake further study with a high degree of autonomy
- B1 Ability for auronomous learning
- B2 Organization and planning capacity
- B4 Ability for analysis and synthesis
- C2 Use correctly chemical terminology, nomenclature, conversions and units
- C4 Use computer tools properly to obtain information, process data, perform computational calculations and calculate matter properties
- C14 To know the principles of quantum mechanics and its application in the description of the structure and properties of atoms and molecules
- C15 Know the main techniques of structural research, including spectroscopy
- D1 Ability to solve problems

Expected results from this subject

Contents	
Торіс	
Subject I. The Group Theory in Chemistry.	 Matrix representations. Character tables. Degeneracy. Basis functions. Direct product representations. Vanishing integrals. Symmetry adapted linear combinations and projection operators.
	7. Group Theory and Quantum Chemistry.
Subject II. Molecular electronic structure I.	 The molecular hamiltonian: the Born-Oppenheimer approximation. Potential energy surfaces. The hydrogen molecule ion H2+: the MO method. The hydrogen molecule H2: the VB method Comparison of the MO and VB methods. The Hellmann-Feynman theorem and the virial theorem applied to molecules On the validity of the Born-Oppenheimer approximation.
Subject III. Molecular electronic structure II.	 Electronic configurations and electronic terms in diatomic molecules. The effect of the spin-orbit interaction. Electron density and bond polarity. The MO and VB methods applied to diatomic molecules. Polyatomic molecules: classification of the electronic states. Application of the MO method to simple polyatomic molecules. Electron population analysis. Localized MOs. Molecules with conjugate bonds: the sigma-pi separation. The free electron MO method. The Hückel MO method. Electron delocalization and aromatic stability. Population of the energy levels: Fermi-Dirac and Bose-Einstein distributions. Electronic bands. Application of the VB method to polyatomic molecules: types of hybridization. Resonance and its meaning in Physical Chemistry.
Subject IV. Electronic structure and Computational Chemistry.	 The Hartree-Fock SCF method applied to molecules. Basis functions in molecular calculations. The Roothaan-Hall and Pople-Nesbet equations. Limitations of the Hartree-Fock SCF method. Post-Hartree-Fock methods. Density Functional Theory (DFT). Relativity in molecular calculations. Semi-empirical methods.
Subject V. Interaction of the electromagnetic radiation with matter and molecular spectroscopy.	 Interaction of the electromagnetic radiation with matter. Diffusion. Absorption: transition moments and selection rules. The Lambert-Beer law. Broadening of the spectral lines. Raman effect. Laser and laser types. Fourier transform. General aspects of the experimental techniques

Subject VI. Molecular rotation and rotational spectroscopies.	 The polyatomic rigid rotor: results of the classical and quantum treatments. Rotational spectra. Selection rules, populations and line intensities Stark effect. Stark effect. Hyperfine structure and nuclear quadrupole moment. Molecules with non-zero electronic angular momentum. Type-I doubling. Microwave spectroscopy (MW) and its applications. Rotational Raman spectra. Obtaining the molecular geometry from the rotational constants. Nuclear spin and rotational states.
Subject VII. Molecular vibration and vibrational	1. Vibration in diatomics.
spectroscopies.	2. Anharmonicity, vibration-rotation interaction and centrifugal distortion.
	3. Vibration and vibration-rotation spectra in diatomic molecules.
	4. Line intensity and nuclear spin.
	5. Vibration in polyatomic molecules.
	Vibration-rotation spectra in polyatomic molecules.
	Analysis based on the symmetry: IR and Raman activities.
	8. Anharmonicity and potential energy surfaces.
	9. Normal modes with more than a minimum.
Subject VIII. Electronic spectra.	1. Electronic spectra.
	2. Diatomic molecules.
	2.1 Selection rules.
	2.2 Franck-Condon principle and fine structure.
	2.3 Dissociation and predissociation.
	3. Electronic spectra in polyatomic molecules.
	4. Fluorescence and phosphorescence.
	5. Non-radiative transitions.
	6. Photoelectron spectroscopies
	7. Optically active molecules. Circular dicroism.
Cubic at IV. Decementary and strangerstrangers	8. Laser techniques.
Subject IX. Resonance spectroscopies	1. Introduction.
	 Foundations of the RMN and RSE spectroscopies : Chemical shift. Interpretation of the shielding constants.
	4. Interpretation of the fine structure.
	5. RMN and nuclear exchange processes.
	6. RMN for the solid state.
	7. Foundations of the pulse techniques and spin relaxation.
	8. RSE spectroscopy: hyperfine structure.
	9. Quadrupole resonance spectroscopy.
	10. Mössbauer spectroscopy.

	Class hours	Hours outside the classroom	Total hours
Lecturing	23	57.6	80.6
Problem solving	12	26.4	38.4
Laboratory practical	14	14	28
Objective questions exam	2	0	2
Objective questions exam	1	0	1

	Description
Lecturing	Discussion of the basic aspects of each topic and description of those to be addressed in the seminars. Discussion of the specific issues raised by students. The student will be provided with the necessary study material to follow the lessons through the Moovi (Moodle) platform.
Problem solving	Solution to numerical problems and theoretical questions, as well as test-type exercises or guided exercises. Some basic numerical and theoretical problems will be solved by the teacher in the seminars with the participation of the students. The results will be analyzed and interpreted. On a voluntary basis the student may present the solution to some selected exercises in the seminar, with the assistance of the teacher and the participation of the other students. They may, voluntarily as well, present a written resolution to an exercise and debate it with the teacher in tutoring time.

Laboratory practical Every student is expected to perform a well-balanced set of experiments which exemplifies and develops the basic topics. The experiments will be carried out by couples of students for agility. Scripts describing every experiment, references to bibliography and instructions for the use of computers, programs and instrumentation, as well as others related to laboratory safety, will be made available as needed. The student must produce the figures and do the necessary calculations to obtain the final results, as well as analyze and discuss them.

Methodologies	Description
Lecturing	The student may raise specific questions in the lectures and wider ones in the teacher's tutoring time.
Problem solving	The solution to the exercises will be discussed with the students in connection with the development of the theoretical aspects. Also the solution to the tests. Students will be helped in the classroom with the guided exercises. The additional questions they may raise will be answered during the teacher's tutoring time.
Laboratory practical	The practical problems or doubts the students may raise regarding the theoretical foundation of the experiments, their development or the key aspects of the calculations needed to obtain the result will be discussed during the practical sessions. Additional issues may be addressed in tutoring hours.
Tests	Description
Objective questions exam	Any doubts regarding the exams, in particular those related to their scope and configuration, will be clarified. In the case of the short exams, the solutions to the exercises will be briefly presented and discussed in a seminar after the short exam. During tutoring hours, the answers provided by the student will be discussed with him/her at his/her request.

Assessment	t		
	Description	Qualificatior	Training and Learning Results
Problem solving	The resolution of one or more exercises by the student and their presentation in the seminar will be rated. Short tests taken in the seminar will be rated too, as well as the final part of the guided exercises. In all cases on a voluntary basis. The weight in the global grade lies between 0-10%.	10	A1 B1 C2 D1 A5 B2 C4 B4 C14 C15
Laboratory practical	Lab practices are compulsory. They will be rated by the assessment of their development (5%) as well as by that of the corresponding practice reports (15%), one per practice. Those reports have to be elaborated individually, must contain tables, figures and graphics and the calculations needed to obtain the results, as well as a detailed discussion in relation to all relevant theoretical and experimental aspects of the subject. Students must upload the reports to the Moovi platform before the established deadline.	20	A1 B1 C2 D1 A5 B2 C4 B4 C14 C15
Objective questions exam	For the written exams the subject is divided into two parts (I and II), which have a relative weight of 50% in the mark. The written exams consist in the resolution of questions and problems.	35	A1 B1 C2 D1 A5 B2 C14 B4 C15
	 First short exam ("Primera prueba corta", Part I). Voluntary. It will take place by about half of the lecturing period. If its mark is equal or greater than 5 points over 10, part I will be considered as passed by the student. If it is lower than 5 but equal or greater than 3.75, it may represent 50% of the mark of part I, the other 50% coming from part I of the Final Exam, if that leads to improvement; otherwise the latter mark prevails. Its weight on the global mark depends on the results of other items and lies in the range: 0-40%. 	2	_

Obiective Second short exam (Part II). 35 Voluntary. It will take place near the end of the lecturing period. Independently questions of the mark, the students must take part II in the Final Exam (see below). Its exam mark is only valid for calculating an average for part II with corresponding mark of the Final Exam, not independently of the latter. It may represent 25% of the mark of part II if that leads to an improvement, otherwise the mark obtained for part II in the Final Exam will prevail. Its weight on the global mark, depending on that other sections is: 0-10%. Final Exam. Compulsory. It will take place shortly after the lecturing period (May/June). Those students who have not passed the first short exam (mark>=5) will have to take all the exercises. Those who passed it can still try to solve the exercises of part I to improve the corresponding mark. Its weight on the global mark depends on that of other sections and lies within 26.5%-80%. The combined mark of the exams (not including the tests nor the other exercises of the first item) has to be at least 3.75 on the 10-point scale for the subject to be passed. The lab practices and the final exam are compulsory. See also the second and third points of the next section (Other Comments on the Evaluation) The assessment rules of the second call (late June or early July) to those students who have not passed the subject, are given in the first point of the next

Other comments on the Evaluation

section.

- In the second-opportunity evaluation, the corresponding Final Exam is also compulsory, otherwise the mark will be
 the same as in the first opportunity. In any case, the mark can never be lower than that of the first-opportunity
 evaluation. Lab practices represent 20% of the mark. The marks corresponding to "Problem Solving", second short
 exam and also that of the first short exam if >= 3.75, will be kept and used to calculate the average by the weights
 given in the last section, but only if their use gives a higher grade. Otherwise the mark of the Final Exam, including
 all exercises, will prevail, being 80% of the global grade.
- The average mark corresponding to the exams, third and fourth items of the last section, has to be >=3.75 on a 10 point scale for the other items (problem solving and lab) to be considered in the global average. Such global average must be >=5 on the 10 point scale for the subject to be passed. Lab Practices and the Final Exam are compulsory.
- Taking two or more tests/guided exercises or presenting one exercise (Problem Solving), or attending one Lab session or any of the short exams, makes it impossible to get "No Presentado" as a grade.

Training and Learning Results

Code

- A1 Students can apply their knowledge and understanding in a manner that indicates a professional approach to their work or vocation, and have competences typically demonstrated through devising and sustaining arguments and solving problems within their field of study
- A3 Students have the ability to gather and interpret relevant data (usually within their field of study) to inform judgments that include reflection on relevant social, scientific or ethical issues
- A5 Students have developed those learning skills that are necessary for them to continue to undertake further study with a high degree of autonomy
- B1 Ability for auronomous learning
- B4 Ability for analysis and synthesis

C12 Know the kinetics of chemical change, including catalysis and reaction mechanisms

- C27 Demonstrate the ability to observe, monitor and measure chemical processes, by systematically and reliably recording them and presenting reports of the work done
- C28 Interpret data derived from laboratory observations and measurements in terms of their meaning and relate them to the appropriate theory
- D1 Ability to solve problems

Expected results from this subject

Expected results from this subject	Tr	aining) and Le	arning
		I	Results	
Define with precision, all the basic concepts in Chemical Kinetics, and know the different methods	A1	B1	C12	D1
of data analysis to obtain speed equations.	A3	B4	C27	
Be able to carry out the analysis of kinetic data, including those of complex reactions and relate them to the reaction mechanisms.	A5		C28	
Explain the fundamental hypotheses of the different theories on chemical change, as well as the results and limitations of each of them (Collision Theory and Transition State Theory and know how to apply them as a tool in the analysis of kinetic results).	I			
Describe the different types of catalysis, explain the mechanism of catalyzed reactions, and apply it to specific cases. Know how to particularize said kinetic-formal treatment to the different types of catalysis.				
Describe the basis of the different experimental techniques available for the study kinetics of chemical reactions.				
Contents				
Topic				
	C			

Statistical thermodynamics	Introduction to the Statistical Thermodynamics. Configurations. Function of molecular partition. Canonical community. Thermodynamic functions. Constants of balance.
Kinetical theory of the gases	Foundations of the kinetical theory of the gases. Collisions and surfaces. Effusion.

Kinetical formal.	Rates of chemical reactions and rate equations. Orders of reactions, half- lives, elementary steps, molecularity. Analysis of kinetic data. Kinetic analysis of some complex reactions. Mechanisms. Effects of temperature.
Experimental methods in Kinetical Chemical	Transformation of the rate equations. Conventional techniques for slow reactions. Relaxation methods to study fast reactions.
Theoretical interpretation of the speed of reaction.	Collision theory for bimolecular reactions. Transition state theory.
*Catálisis	Catalysis. Homogeneous, acid-base, enzymatic, and heterogeneous catalysis.
Kinetical *electródica	Electrode-solution interface. Steps of an electrodic process. Galvanic cells. Overpotentials. Butler-Volmer and Tafel equations. Corrosion. Experimental techniques.

Assessment				
	Description	Qualification	Training	and
		Le	earning R	esults
Seminars	Examination / short proof	15 A1	1 C12	D1
		A5	5 C28	

Laboratory practical	It marks here, together with the effort and the attitude, the *destrezas and the competitions developed pole student during the realization of the distinct practices. Also it will value the quality of the summary of #each of the practices as well as it of the memory that will have to deliver to it finalize all they (memory of practical).	15	A1 A3 A5	C12 C27 C28	D1
	The delivery of the summaries to it finalize each practical, the memory of practices, and the assistance the sessions of practices is MANDATORY and, therefore, is not possible to approve the subject in the case of not to have realized *alguna of them.				
Essay questions exam	Examination of theory - questions/*cuestions developmental	35	A1 A5	C12 C28	D1
Essay questions exam	*Examen Practical - development of exercises that can be numerical the theorists	35	A1 	C12 C28	D1

- On the date indicated for the exams there will be two tests, one theoretical (35%) and another practical (practical exercises, 35%).

- In the second and subsequent exams, the teacher may opt for this scheme or another set, corresponding to a score of 70% of the overall grade.

Attendance at practices, and the delivery of the corresponding reports (summary of each practice and memory of which indicated) is MANDATORY. An unjustified fault will mean a direct failure in the subject and have to do them again the following year. More than three (3) justified absences will mean the suspense of the subject and that they have to be done again in the following course.

Attendance at master classes and seminars is highly recommended.

The score of the laboratory part will have to be equal to or greater than 5.0 (scale 0-10). The minimum grade REQUIRED in each of the development exams will be 3.8 (on a scale 0-10) so that it can be averaged with the scores of the other sections. There is no minimum grade in the control exams / short tests. The overall average score must be equal to or greater than 5.0 (scale 0-10).

General					
description	The first part of the subject focuses on the structural study and the structure/propert	ies r	elatior	nship of	
	inorganic solids.				
	In the second part of the subject, the most relevant aspects of the Chemistry of Tran	sitior	n Meta	ls and t	heir
	derivatives, such as coordination compounds, are addressed.				
	Experiments on the synthesis and characterization of coordination compounds and in	norga	nic so	lids will	be
	carried out in the laboratory.				
Training ar	d Learning Results				
Code					
A2 Studen	ts have demonstrated knowledge and understanding in a field of study that builds upo	n the	eir gen	eral sec	condary
	on, and is typically at a level that, whilst supported by advanced textbooks, includes s				
	d by knowledge of the forefront of their field of study				
A3 Studen	ts have the ability to gather and interpret relevant data (usually within their field of stu	(vb)	to info	مامد المراج

Methodologies	
	Description
Lecturing	(*)As clases teóricas adicaránse a presentar os aspectos fundamentáis dos temas.
Laboratory practical	(*)Realizaranse prácticas de laboratorio nas que se aplicarán os coñecementos teóricos adquiridos. As prácticas realizaranse en 8 sesións de 3,5 horas e os alumnos deberán reflectir e interpretar o observado no correspondente caderno de laboratorio.
Seminars	(*)As clases de seminario adicaranse á resolución de casos prácticos relacionados coa materia así como á resolución de dudas ou cuestións que surxan no desenvolvemento de cada tema. Contemplase tamén realizar seminarios nos que se abordarán aspectos non impartidos en materias anteriores pero necesarios para a marcha do curso.

Description

Personalized assistance

Methodologies Lecturing

Laboratory practical

Seminars

	Description	Qualificatio	on Training an Learning Results
Laboratory practical	(*)A asistencia ás clases prácticas presenciais é obrigatoria. A avaliación nas prácticas de laboratorio constará dun 10% de resolución de cuestións sinxelas e un 5% baseado no comportamento e destreza por observación directa do/a profesor/a. A puntuación soamente será considerada na proba longa conséguese unha cualificación igual ou superior a 3 puntos sobre 10.	15	A2 B3 C8 I A3 B4 C9 C26
Seminars	(*)Nas sesións de seminario pediráselles aos/*as estudantes a resolución de cuestións sinxelas que deberán entregar nese momento e que servirán para a súa avaliación. A puntuación soamente será considerada si na proba longa conséguese unha cualificación igual ou superior a 3 puntos sobre 10.	15	B1 C8 B3 C9 B4
Objective questions exam	(*)Haberá dúas probas curtas no cuadrimestre onde se avaliarán as competencias relacionadas cos temas. A puntuación soamente será considerada na proba longa si conséguese unha cualificación igual ou superior a 3 puntos sobre 10. A data e hora de realización é público e consta na programación académica aprobada na Xunta de Facultade correspondente.	30	B3 C8 B4 C9
Objective questions exam	(*)Haberá unha proba final na que se fará unha avaliación global da materia. A puntuación da proba soamente será considerada si conséguese na proba de *formulación un 9 sobre 10. A data e hora de realización é público e consta na programación académica aprobada na Xunta de Facultade correspondente.	40	B3 C8 B4 C9

*The information in the planning table	is for guidance only and does no	ot take into account the het	erogeneity of the students.

Methodologies	
	Description
Lecturing	The material of the subject will be available on the Moovi platform in advance.
	The teaching staff will present, in a clear and structured way, the most relevant aspects of the subject assigned to each master session.
Seminars	The aspects discussed during the lectures will be worked on by solving the exercises proposed by teachers.

Laboratory practical

The laboratory work will be developed in 4 sessions of 3.5h.

During the synthesis, they will have to write the laboratory notebook, rigorously and clarity, which will be delivered at the end of the practices.

In addition, the students will carry out a questionnaire about the experiments carried out in the laboratory, through the Moovi platform.

Personalized assista	nce
Methodologies	Description
Lecturing	The teaching staff will dedicate the necessary time to answer the questions of the students related to the subject of the course
Seminars	The teaching staff will dedicate the necessary time to answer the questions of the students about the exercises and problems solved in the seminar sessions, as well as those proposed in the Moovi platform
Laboratory practical	The teaching staff will dedicate the necessary time to answer the questions of the students related to retrosynthetic analysis of the target molecule and sequence design synthetic During the laboratory sessions, the faculty will supervise the development of the experiments proposed by students as well as compliance with security rules.

Essay questions exam	
Essay questions exam	

Assessment			
	Description	Qualificatior	5
			Learning Results
Laboratory	1. It is mandatory to carry out the laboratory practices	30	A3 B3 C15 D2
practical	 2. It will be valued: 2.1. The laboratory notebook (20% of practical qualification), structural analysis (25% of practical qualification), reaction mechanisms (20% of practical qualification), safety data sheets (10% of practical qualification) and questions about IUPAC nomenclature (15% of practical qualification) 2.2. Resolution of questions about work experimental, carried out in the laboratory, through the Moovi platform (10% of practical qualification)) 3. To achive the experimental sessions it is mandatory to have achived each one of the evaluated parts 		A5 B4 C19 C27 C28
Essay questions exam	Learning outcome: All The following tests will be carried out throughout the subject: Two short tests (1h long; 15%)	30	-
	 Learning outcome: Recognize structural elements in organic molecules. Propose retrosynthetic sequences of proposed molecules Analyze alternative retrosynthetic proposals Design selective synthetic sequences of target molecules . Assess the use of efficient transformations of structural simplification. Properly manage interconversions between functional groups and protecting groups. Know the reactions that can provide selectivity and their mechanisms. Therefore, the qualification from the remaining sections will only be added when the score obtained in the sum of the written tests is equal to or greater than two points and a half. 		_

Essay questions exam	A long written test (2h long; 40%) will be carried out throughout the subject:	
	To achive the subject, students must obtain a minimum of 50% in all the written tests (proof of short answer and long answer test). Learning outcome:	
	 Recognize structural elements in organic molecules. Propose retrosynthetic sequences of proposed molecules Analyze alternative retrosynthetic proposals 	
	 Design selective synthetic sequences of target molecules . Assess the use of efficient transformations of structural simplification. 	
	 Properly manage interconversions between functional groups and protecting groups. 	
	- Know the reactions that can provide selectivity and their mechanisms.	
	Therefore, the qualification from	
	the remaining sections will only be added when the score obtained in the sum of the written tests is equal to or greater than two points and a half.	

1. The participation of the students in any of the evaluation activities of the subject will imply that they acquire the condition of presented, therefore, they will be assigned a grade.

40

2. In addition, students may choose to be evaluated by a **single test** at the end of the semester and not by continuous evaluation. To do this, they will have to communicate it, in writing, to the subject coordinator at the beginning of the semester. In this case, the final evaluation will be 30% the laboratory work and 70% the single test.

June Assessment:

To achieve the subject it is mandatory to obtain a qualification equal or greater than 5 points in both of the evaluated parts, experimental and theoretical works.

July assessment:

1. The score obtained by students on the course: maximun of 3 points for laboratory practices

2. Written test: maximun 7 points.

Additional information:

1. The students who achieve the laboratory practices, in the previous course, will not have to do the laboratory work again.2. Serious conceptual mistakes, will mean the assignment of new activities aimed at solvent learning problems as soon as possible

Assessment

	Description	Qualification	nTraining and
			Learning Results
Essay questions exam	It will make a long proof of all the matter	30	D3
Objective	They will make three exam tests during the course. Said exam tests consist in one splits type test and in another part of resolution of practical cases. The first when finalising the two first subjects, the second of the subject 4 and the third of the subject 5. The time to perform the exams tests will be 1 hour.	e 40	- D3
Project	The student will make the approach and development of a concrete project of chemistry, and east will be evaluated so much by his oral exhibition as by his presentation written.	30	_

FIRST ANNOUNCEMENT

To pass the subject it is mandatory to obtain at least 40% of the grade assigned to the total completion of the project (written presentation/final presentation) and the final exam.

CONDITION OF PRESENTED: The student's participation in any of the written tests or the delivery of any part of the project will imply the condition of being presented and therefore a grade will be assigned.

SECOND ANNOUNCEMENT

For the second announcement keep the qualifications of evaluation continuous (so much of the 3 exam tests of questions written as of the work) obtained along the course, always that these were equal or upper to 4. The student will present to the no surpassed parts previously.

Commitment etic

It expects that the present student a behaviour etic suitable. In case to detect a behaviour no etic (copy, plagiarism, use of devices electronics unauthorised, for example), there are that the student have not the necessary requirements to surpass the matter.

Methodologies	
	Description
Seminars	They will devote to the resolution of doubts and questions that arise in the development of each subject, to the resolution of problems and/or exposed exercises by the profes@r and to the presentation by part of the alumn@s of some report and/or work related with the matter.
Lecturing	The alumn@s will receive 24 hours of classes *expositivas in an only group, that will devote to the presentation of the fundamental appearances of each subject.

Personalized assistance

Methodologies Description

Seminars The alumn@s will be able to consult all type of doubts related with the matter in the *tutorías.

	Description	Qualification			ing a ng Re	
Seminars	In addition to resolving practical exercises that allow to the alumn@s settle the knowledges on the subjects unrolled in the classes of theory, and to resolve all the exposed doubts, the classes of seminar will use also to carry out the continuous evaluation of the alumn@s. This process of continuous evaluation will make through the resolution of exercises and/or problems as well as by means of the realisation of reports and/or works that will be exposed by the alumn@s and that will be related with the contents of the matter. The evaluation of the Seminars of the subjects 1-3 *equivaldrá to 10% of the final note and the one of the subjects 4-6 to 25%.		43 I I	B1	C16 C24	D3
Objective questions exa	A short test will be carried out throughout the cuatrimester which will amaccount for 25% of the final note.	25	1	B1 B3 B4	C16 C24	D3
Objective questions exa	At the end of the cuatrimester, a second test will be held, covering the rest amof the subjects and accounting for 40% of the final grade. To pass this test, students must obtain at least 50% of the score in each of the two sections (theory and problems).	40 /	Ī		C16 C24	D3

Other comments on the Evaluation

Observations:

The participation of any of the proofs planned evaluation will involve the condition of presented and, therefore, the allocation of a qualification in the record of the matter. It will be necessary to surpass the two short proofs (obtain a minimum of 40% of the note in each one) to be able to take into account the other elements of evaluation.

Evaluation of July: The students that non surpass one or the two short proofs that make during the cuatrimestre, will have to present to the corresponding part in the announcement of July. This proof will substitute the results obtained in the tests/s short/s made along the cuatrimestre. The remaining elements of evaluation are not recoverable and the qualifications obtained will add to the one of the quoted proof as long as the qualification obtained was equal or upper to 4 on 10. In case to obtain a lower qualification, will be this the one who appear like final qualification of the matter. If the student renounces to the continuous evaluation and opts by a global evaluation, each one of the short proofs will cost 50% of the final note. The students that non surpass one or the two short proofs that make during the cuatrimestre, will have to present to the corresponding part in the announcement of July.

Metodoloxía docente	
	Description
Lección maxistral	Exposición oral e directa, por parte do profesorado, dos coñecementos fundamentais
	correspondentes aos contidos da materia.
Seminario	Presentación e discusión de publicacións científicas e diferentes tópicos previamente asignados polo profesorado.
Prácticas de laboratorio	Realización, por parte do alumnado, de experimentos relacionados cos contidos da materia

Atención personalizada			
Methodologies	Description		
Lección maxistral	Resolución de dúbidas, mediante concertación de cita previa, ao través do Campus Remoto.		
Seminario	Resolución de dúbidas, mediante concertación de cita previa, ao través do Campus Remoto.		
Prácticas de laboratori	o Resolución de dúbidas, mediante concertación de cita previa, ao través do Campus Remoto.		

	Description	Qualification	ר ו	raining a	nd
				arning Re	
Lección	A finalidade desta proba coñecementos alcanzado polo alumnado.	40	A5	C34	
maxistral	O seu peso, dependendo dos outros apartados da avaliación será:				
	40%-100%.				
	A cualificación ha de ser polo menos 4.0				
	sobre 10 para que poida realizarse media cos outros apartados.		_		
Seminario	A súa realización é obrigatoria. Puntúanse por valoración da participación	30	A1	B4 C34	D2
	activa do alumno nos seminarios, resolución de problemas, exposición de				D3
	traballos, etc.		_		
Prácticas de	A súa realización é obrigatoria. Puntúanse por valoración do seu	30	A1	C34	D2
laboratorio	desenvolvemento experimental (15%) así como pola dun informe de prácticas.		A5		D3
	Este ha de confeccionarse de forma individual ou en grupo (segun determine o				
	profesor), conter táboas, gráficas e os cálculos necesarios para a obtención dos	5			
	resultados, así como unha análise dos mesmos, en relación co procedemento				
	experimental e o fundamento teórico empregados. Debe entregarse ao				
	profesor encargado do correspondente grupo de laboratorio no prazo que se				
	estableza (15%)				

Other comments on the Evaluation

Para aprobar a materia é necesario aprobar as prácticas de laboratorio e seminarios.

De realizarse unha proba escrita a puntuación debe ser polo menos 4 sobre 10 para poder facer media coas outras seccións

da avaliación. A puntuación media total debe ser de 5 puntos sobre 10 ou superior para que poda superarse a materia.

A presentación de calquera exercicio que poida ser avaliado, ou a realización de práctica ou proba imposibilita que a

cualificación sexa 'non presentado'.

No exame de Xullo (2ª oportunidade) manterase a cualificación obtida polo alumnado na presentación e nas prácticas de laboratorio realizadas durante o período docente. Iso significa que o alumnado unicamente realizará a proba de preguntas obxectivas no devandito exame.

Compromiso ético. Espérase que o alumnado presente un comportamento ético adecuado. En caso de detectar un comportamento non ético (copia, plaxio, utilización de aparellos electrónicos non autorizados, por exemplo), considerarase que esa persoa non reúne os requisitos necesarios para superar a materia.

Alyls and cyclopentadienyls.

Subject 7. Types of organometallic reactions (I). Ligand substitution reactions.
Subject 8. Types of organometallic reactions (I	 Reactions of oxidative addition and reductive elimination.
Subject 9. Types of organometallic reactions (I	II). Reactions of migratory insertion and elimination.
Subject 10. Types of organometallic reactions	Reactions of nucleophilic and electrophilic attack to coordinated ligands.
<u>(</u> IV).	
Subject 11. Organometallic catalysis.	General comments. Relevant catalytic cycles.

Methodologies	
	Description
Lecturing	Students, in a single group, will receive 24 hours of expository classes in which the teacher will present the most relevant aspects of each topic.
Problem solving	Students, in a single group, will receive 12 hours of seminar classes that will be dedicated to solving doubts or questions that arise in the development of each topic, and to the resolution of questions, exercises and problems proposed by the teacher.
Laboratory practical	Laboratory practices will be carried out in which the theoretical knowledge acquired will be applied. The practices will be carried out in 4 sessions of 3.5 hours and the students must reflect and interpret what is observed in the corresponding laboratory notebook.
Presentation	Students will make a short presentation of a research article in organometallic chemistry from the last year applying the concepts learned during the course.

Personalized assistance			
Methodologies	Description		
Lecturing	Students will be able to consult all kinds of doubts related to the subject during the tutorial hours.		
Problem solving	Students will be able to consult all kinds of doubts related to the subject during the tutorial hours.		
Laboratory practica	Students will be able to consult all kinds of doubts related to the subject during the tutorial hours.		
Presentation	Oral presentation		

	Description	Qualification	Training and
		Quanneación	Learning Results
Problem solving	In addition to resolving practical exercises that allow to the students settle the knowledges on the subjects developed in the classes of theory, and to resolve all the exposed doubts, the classes of seminar, will use to carry out the continuous evaluation of the students. This process of continuous evaluation will make through the resolution of exercises inside and out of the classroom related with the contents of the matter as well as the resolution of short questions proposals by the professor. The global note of all the exercises will have to surpass the 3 on 10 to be taken into account in the final note.		A3 B1 C38 B3 C39 B4
Laboratory practical	The assistance to the face-to-face practical classes is compulsory. The evaluation in the practices of laboratory will consist of a part based in the behaviour and skill by direct observation of the/to professor/to as well as of the previous and back work to the experimental work. It needs a 5 on 10 to pass the course. Those students that have the practices approved in the previous course will be able to request not to repeat them in the current course keeping the qualification obtained.		A3 B1 C38 D2 B3 C39 B4
Presentation	Individual or group presentation of a research article related to the subject. The presentation and clarity of the slides as well as the answers to questions from teachers and students will be taken into account.	15	A3 B1 C38 B3 C39 B4

Essay questions exam	A short proof on the contents of the first part of the course. It will demand a minimum note of 3 points out of 10 to pass the course	20	B1 C38 B3 C39 B4
Essay questions exam	A final proof in which it will have a global evaluation of the course and will cost 40% of the final note. It requires a 3 on 10 to pass the course	30	B1 C38 B3 C39 B4

Requirements for passing the course

- Pass the laboratory practicals with a grade equal to or higher than 5 out of 10.

-A mark of 5 out of 10 in the global calification of all the methodologies/tests in continuous assessment or in the final exam in the second opportunity, considering the practical laboratory grade, for non-continuous assessment

Development of continuous evaluation

- The specific competences of the subject related to the competences of the degree will be evaluated explicitly in deliverable exercises and written tests. The basic, general and transversal competences will be assessed implicitly in the marking of the exercises.

- In order to take them into account in the final grade, a score higher or equal to that detailed in the description of each test will be required.

-Students who do not pass the subject at the end of the term will have to take a written test in the final evaluation period in July. This test will be worth 50% of the grade and will replace the results of the two essay question tests. The marks for the rest of the activities are not recoverable.

Non-continuous evaluation

The choice of the non-continuous assessment modality implies the renunciation of the right to continue the assessment of the remaining activities of the continuous assessment modality and of the grade obtained up to that moment in any of the tests that have already taken place.

In the case of choosing the non-continuous evaluation or not achieving the minimum mark required for continuous assessment, the student may take a test at the end of the term in which he/she will have to solve questions related to all the specific competences of the subject except the practicals. This test will be different in length from the one taken by those who opt for continuous assessment and the grade obtained will be 85% of the final grade. A 5 out of 10 will be required to pass the course.

Avaliación				
	Description	Qualification	Training	
Prácticas de laboratorio	A avaliación das clases de prácticas de xeito continuo, con cuestións do profesorado sobre o contido e desenvolvemento, así como e a Memoria das mesmas, suporá un 15% da cualificación final. Esixirase unha nota mínima de 4.0 puntos sobre 10.0 para superar a materia.		A4 B4 C4 A5	12 D1 D2
Resolución de problemas e/ou exercicios	Cada estudante terá á súa disposición as titorías cos profesores da materia para resolver de forma individualizada as dúbidas que poidan xurdir ao longo do curso en cualquera dos seus aspectos: clases de teoría, clases de seminario ou resolución de problemas e/ou actividades autónomas. O obxectivo de ditas titorías é o de contribuir a que os estudantes poidan afianzar os seus coñecementos e enfrentarse en millores condicións as distintas actividades de avaliación propostas (probas escritas, resolución de exercicios).	I	A4 B4 C4 A5	2 D1 D2
	O alumnado realizará traballos relacionados co contido da materia. Estes traballos deberán axustarse aos parámetros especificados polo profesorado, e presentaranse de forma escrita a través da plataforma habilitada ou a través dunha exposición oral e formarán parte da avaliación continua (20%).	ì		
Exame de preguntas de desenvolvemento	Unha proba sobre os contidos dos primeiros temas, que suporá o 15% da cualificación final. Esixirase unha nota mínima de 2.5 puntos sobre 10.0 nesta proba para superar a materia.		A4 B4 C4 A5	12 D1 D2
Exame de preguntas de desenvolvemento	Unha proba sobre TODOS OS CONTIDOS DA MATERIA, que suporá un 30% da cualificación final. Esixirase unha nota mínima de 4.0 puntos sobre 10.0 nesta proba para superar a materia.		A4 B4 C4 A5	l2 D1 D2

Prácticas de laboratorio:

A asistencia ás clases prácticas de laboratorio é obrigatoria.

O traballo de laboratorio será avaliado como se indicóu con anterioridade. Neste apartado incluiranse os seguintes aspectos: traballo previo e/ou posterior, desenvolvemento do traballo experimental e caderno de laboratorio. A avaliación do desenvolvemento do traballo experimental realizarase utilizando a ferramenta de observación sistemática.

Para que o alumnado supere a materia deberá obter a cualificación de APTO no traballo de prácticas de laboratorio.

No caso de que non se superen os mínimos esixidos nalghuna das probas anteriores, a cualificación final obtida na materia será a cualificación ponderada da proba de avaliación global.

Mínimos esixibles:

A identificación de erros conceptuais graves, conlevará unha asignación de actividades específicas orientadas a adquirir ditas competencias. Estas actividades serán evaluadas como parte do 20% correspondente aos entregables.

AVALIACIÓN EN XULLO: manterase a cualificación obtida polo alumnado durante o curso en resolución de problemas, prácticas de laboratorio e traballos. Realizarase unha proba sobre todos os contidos teóricos da materia que suporá un 45% da cualificación final e unha proba escrita da parte experimental que suporá un 15% da cualificación final. Será necesario alcanzar nestas probas un mínimo de 4 puntos sobre 10 para superar a materia e para ter en conta o resto dos elementos de avaliación.

ALUMNADO DE 2ª E POSTERIORES MATRÍCULAS: Ao estudantado que fose avaliado con APTO/A no traballo de laboratorio no curso anterior outorgaráselle mención de APTO/A no seguimento do traballo de laboratorio no curso académico actual, non sendo necesaria a realización dos experimentos novamente. Con todo, deberán realizar os entregables e a proba escrita da parte experimental para conseguir a cualificación correspondente á parte experimental da materia no curso académico actual.

CONDICIÓN DE PRESENTADO/A: A participación do/a estudante nalgún dos actos de avaliación da materia implicará a condición de presentado/a e, polo tanto, a asignación dunha cualificación. Considéranse actos de avaliación a asistencia a clases prácticas de laboratorio, a entrega de traballos e exercicios encargados polo profesorado, ou a realización de algunha proba.

OPCIÓN DE AVALIACIÓN NON CONTINUA: (provisional). A UVigo está a elaborar unha normativa ao respecto) o alumnado que desexe non optar á avaliación continua deberá solicitalo durante as tres primeiras semanas de curso á persoa coordinadora da materia.Para superar a materia deberá realizar as Prácticas de Laboratorio, acadar cualificación APTO/A no traballo desenvolvido no laboratorio e cualificación igual ou superior a 5 puntos sobre 10 na proba escrita da parte experimental. Ademais deberá obter como mínimo 5 puntos sobre 10 nunha proba na que se avaliarán todos os contidos da materia.

Methodologies	Description
Lecturing	The lecturer will develop the contents of the programme based on the material provided to the student through Moovi. In the lecture sessions, the lecturer will present the fundamental aspects of the subject, which should be complemented by the recommended bibliography.
Seminars	The seminar classes will help to reinforce the learning of the subject matter explained during the lectures by solving numerical problems and/or theoretical-practical exercises. The lecturer will regularly propose different problems, exercises or questionnaires that will be solved individually by the student and delivered for evaluation.
Laboratory practical	Laboratory experiments will be carried out in 4 sessions of 3.5 hours each. Prior to each practical session, the student will be provided with supporting material in Moovi for the preparation of the experiments to be carried out.

Personalized assista	nce

SUBJECT 2. Regulatory standards and documentation of quality systems.	Standardization, certification and accreditation. Generic systems of quality management. Series of ISO 9000 standards. The standard UNE-EN ISO/IEC 17025. Good Laboratory Practice. Documentation used in quality systems. Management of quality documentation.
SUBJECT 3. Statistical tools to ensure the analytical quality.	Statistical proofs of significance. Components of uncertainty. Evaluation of uncertainties of unitary operations and of analytical processes. Expression of results.
SUBJECT 4. Selection and validation of methods analysis.	ofSelection of methods of analysis. Concept and scope of the validation of an analytical method. Types of validation. Quality parameters of analytical methods.
SUBJECT 5. Management of laboratory, equipment and reagents.	Organisation and infrastructure of the laboratories. Materials and methods. Classifications of analytical methods. Quality of reagents.
SUBJECT 6. Quality in sampling.	Sampling in the analytical process (sampling plan, types of sampling, sample handling). Limitations of sampling. Quality assurance in sampling.
SUBJECT 7. Internal quality assurance.	Analytical references. Certified reference materials (preparation, selection and use of CRMs). Recovery studies. Application of t test. Activities of internal control. Blanks and control samples. Control charts.
SUBJECT 8. External quality assurance.	Intercomparison exercises (definition and types). Audits in a quality system (objectives, types, planning, performance and documents). Accreditation (concept, implications, accreditation bodies, process and documents of accreditation).

Objective questions exam	0	18	18
*The information in the planning table is	for guidance only and does no	ot take into account the het	erogeneity of the students

Methodologies	
	Description
Lecturing	The lecturer will develop the contents of the programme based on the material provided to the student through Moovi. In the lecture sessions, the lecturer will present the fundamental aspects of the subject, which should be complemented by the recommended bibliography.
Seminars	The seminar classes will help to reinforce the learning of the subject matter explained during the lectures by solving numerical problems and/or theoretical-practical exercises. The lecturer will regularly propose different problems, exercises or questionnaires that will be solved individually by the student and delivered for evaluation.
Laboratory practical	Laboratory experiments will be carried out in 4 sessions of 3.5 hours each. Prior to each practical session, the student will be provided with supporting material in Moovi for the preparation of the experiments to be carried out. Those students that have overcome lab practices in the academic year 23-24 will not need to repeat them. In this case, the mark obtained in lab practices will be kept.

Personalized assista	Personalized assistance				
Methodologies	Description				
Lecturing	The lecturer will resolve doubts in a personalised manner on any of the proposed activities (lectures, seminars, laboratory practicals and exams). For this purpose, the tutoring hours of the teaching staff will be used.				
Seminars	The lecturer will resolve doubts in a personalised manner on any of the proposed activities (lectures, seminars, laboratory practicals and exams). For this purpose, the tutoring hours of the teaching staff will be used.				
Laboratory practical	The lecturer will resolve doubts in a personalised manner on any of the proposed activities (lectures, seminars, laboratory practicals and exams). For this purpose, the tutoring hours of the teaching staff will be used.				
Tests	Description				
Objective questions exam	The lecturer will resolve doubts in a personalised manner on any of the proposed activities (lectures, seminars, laboratory practicals and exams). For this purpose, the tutoring hours of the teaching staff will be used.				

The lecturer will resolve doubts in a personalised manner on any of the proposed activities (lectures, seminars, laboratory practicals and exams). For this purpose, the tutoring hours of the teaching staff will be used.

Assessment						
	Description	Qualification			ning a ng Re	
Seminars	For the evaluation of this activity, the teacher will propose to the student the resolution and delivery of problems, exercises and/or questionnaires in seminar classes.	s 5	A1 A4	B5	C31 C33	D1
Laboratory practical	The teacher will assess the experimental work carried out by the student in the laboratory sessions through observation and the evaluation of the obtained results delivered as a laboratory report.	15	A1 A4	B5	C31 C33	D1
	Attendance at laboratory sessions is compulsory. Absence from any laboratory session must be duly justified.					
Objective questions exam	There will be a first exam limited to approximately half of the subject.	40	A1 A4	B5	C31 C33	D1
	This exam may consist of short-answer questions, problems and multiple choice questions.	-				
	By taking the exam, the student will be prevented from receiving the grade "Not presented".					
	Students who obtain a minimum score of 5 out of 10 will not be tested again on the contents of the first exam.					
Objective questions exam	This final exam is compulsory.	40	A1 A4	B5	C31 C33	D1
	This exam may consist of short-answer questions, problems and/or multiple-choice questions.					
	By taking the exam, the student will be prevented from receiving the grade "Not presented".					
	Students who have passed the first part will take the second part of the subject.					
	Students who have not passed the first part of the subject will have to take an examen of this first part of the subject (40% of the final grade).		_			

Other comments on the Evaluation

Second call (July):

The marks obtained by the student during the course in the laboratory practices and seminars will be retained (20 % of the grade).

This exam may consist of short answer questions, problems and/or multiple choice questions.

Students can choose the global evaluation modality and they should inform in writing to the coordinator of the subject during the first month of the semester, in this case, the evaluation will be 85 % the exam an 15 % the laboratory practicals.

Methodologies Description Lecturing Presentation by the teacher of the general aspects of the programme in a structured way, with special emphasis on the fundamentals and the most important or difficult aspects for the student to understand. The professor will facilitate, through the platform MOOVI, the necessary material for a correct follow-up of the matter. The student will have to work previously the material delivered by the professor and consult the bibliography recommended to complete the information. Problem solving During the development of the subject will use the resolution of guestions and problems so as to reinforce the appearances presented in the lectures. Seminars With the development of the syllabus, some activities focused to the work on a specific subject will be made, that will allow to deepen and complement the contents of the subject as it complement of the lecturina. Mentored work Inside the problem solving, the students working in groups will develop a work that will be based in the search of solutions for real problems where the students will have to provide a feasible and viable solution to proposed problem. Presentation The students will make by group a short presentation of the mentored work with the solution proposed for the problem assigned. Laboratory experiments and field trips to companies related to subject will be carried out. The Laboratory practical student will be provided with practice quide as well as the necessary support material for a proper understanding of the experiments to be carried out. The student will prepare a final report in which the main results and conclusions will be presented.

Methodologies	Description
Lecturing	During the hours of tutorship the students, individually or in group, can consult with the lecturers any doubt posed on the subject. The lecturer will inform on the available schedule in the presentation of the subject.
Problem solving	During the hours of tutorship the students, individually or in group, can consult with the lecturers any doubt posed on the problem solving. The lecturer will inform on the available schedule in the presentation of the subject.
Laboratory practical	During the hours of tutorship the students, individually or in group, can consult with the lecturers any doubt posed on the laboratory practical. The lecturer will inform on the available schedule in the presentation of the subject.
Seminars	During the hours of tutorship the students, individually or in group, can consult with the lecturers any doubt posed on the seminars. The lecturer will inform on the available schedule in the presentation of the subject.
Mentored work	During the hours of tutorship the students, in groups or their members of individual way, can consult with the lecturer any doubt posed on the development of the work. The lecturer will inform on the available schedule in the presentation of the matter.
Presentation	During the hours of tutorship the students, in groups or their members of individual way, can consult with the lecturer any doubt posed on the presentation. The lecturer will inform on the available schedule in the presentation of the matter

	Description	Qualification		Training and Learning Results		
Problem solving	After each subject will argue the most notable appearances by means of resolution of questions and problems	10	A3	C45	D1 D2 D3	

Mentored work	It will be evaluated the solution presented together with structure of contents, quality of the content, sources consulted, format.	10	A3	C45	D1 D2 D3
Presentation	The sudent will present the mentored work for its discussion with the other students of the matter. It will be evaluated the oral presentation as well as the answers to the lecturer and the other students.	10	A3	C45	D1 D2 D3
Laboratory practical	The students will make diverse practices of laboratory and visits to companies. When finalising the diverse practical and in the dates indicated by the professors, they will have to deliver the reports of practices and make a questionnaire on the company visits.	10	A3	C45	D1 D2 D3
Essay questions exam	A global exam of for the evaluation of the acquired knowledge in the subject will be assessed.	25	A3	C45	D1 D3
Objective questions exam	In the final exam the student will have to answer a series of short questions or multiple-choice questions in which they will have to demonstrate their knowledge as well as their capacity for synthesis.	25	A3	C45	D3
Oral exam	There will be an individual oral examination of the laboratory practicals carried out in the course.	10	A3	C45	D3

ASSESSMENT:The participation of the student in any of the systems of evaluation of the subject (problem solving, mentored work, presentation and laboratory practical) will involve the qualification of the subject. It is required a minimum attendance to 90% of the laboratory practical to have right to its evaluation. Otherwise, the mark for this section will be 0.0 and they will have to take an exam in the FINAL EXAM.The evaluation by both essay and objective questions (50%) will be carried out in several exams along the course. If the students fail to pass the exam, they have to recover it in the FINAL EXAM.

A student who do not "officially renounces to continuous assessment", will fail if he/she does not achieve a MINIMUM mark of 4.0 points (out of 10) in each of the parts of the "FINAL EXAMINATION". If the minimum mark in the "FINAL EXAMINATION" is passed, the student will pass the course if the FINAL GRADE is \geq 5.0, that is, if the sum of the marks obtained in the different systems of evaluation of the course is \geq 5.0.

Second call:The same criteria will be applied in the second sitting. With regard to the July exam, the grade of the different assessment systems (laboratory practicals, problem solving and exercises) will be maintained, so students will only take the "FINAL EXAM".

STUDENTS RELEASED FROM CONTINUOUS ASSESSMENT: When the School releases a student from the continuous assessment process, his/her grade will be the sum of 90% of the mark obtained in the "FINAL EXAM" and 10% of the laboratory practicals mark. **ETHICAL COMMITMENT:** The student is expected to show appropriate ethical behaviour. If ethically reprehensible behaviour is detected (for example: copying, plagiarism, use of unauthorised electronic devices, etc.) the student will not be considered to meet the necessary requirements to pass the subject. In this case the overall grade for the current academic year will be a fail (0.0). The use of any electronic device will not be permitted during the assessment tests unless expressly authorised. Bringing an unauthorised electronic device into the examination room will be considered as a reason for failing the subject in the current academic year and the overall grade will be a fail (0.0).

Metodoloxía docente	
	Description
Lección maxistral	Clases de 50 *min nas que se introducirá ao alumno no campo da seguridade ambiental e alimentaria, presentando os conceptos básicos relacionados coa detección e control dos contaminantes químicos naturais e *antropogenicos presentes no *medioambiente e os alimentos e os mecanismos establecidos para o seu *contro tendo en conta os aspectos lexislativos na UE.
Seminario	Os alumnos, distribuídos en grupos, deberán resolver unha serie de casos prácticos (cálculos, problemas, cuestionarios etc.) . O obxectivo principal desta actividade é que os alumnos completen maneira e apliquen vos conceptos teóricos mediante a resolución dos problemas expostos.
Prácticas de laboratorio	Desenvolvemento e aplicación práctica de metodoloxías analíticas para o control de contaminantes químicos seleccionados en matrices ambientais e alimentarias mediante traballo autónomo do alumno quen deberá resolver ademais unha serie de cuestións expostas polos profesores en relación ás técnicas analíticas empregadas . A resolución de cuestionarios e/ou realización de breves informes e/ou unha proba final permitirá ao alumno completar a súa formación presencial e adquirir unha visión integral da disciplina

Atención personalizada				
Methodologies	Description			
Lección maxistral	O profesorado tentará facer participativas as clases maxistrais para que os alumnos poidan expor preguntas e, mesmo, breves debates.			
Seminario	O profesorado supervisará a resolución de problemas, cálculos etc. *desarrolladps polo alumno . Tamén atenderá e orientará aos alumnos sobre aspectos relacionados coa aplicación práctica dos conceptos teóricos			
Prácticas de laboratorio	O profesorado supervisará o traballo de laboratorio dos alumnos de cada grupo, corrixindo os erros detectados no desempeño das técnicas e atendendo todas as cuestións que poidan xurdir ao longo das sesións prácticas

Dado que las actividades de formación y evaluación continua programadas dentro de las Prácticas de Laboratorio y del Estudio de casos (incluida en el seguimiento de la actividad de seminarios) están diseñadas para formar al alumnado en habilidades y competencias directamente relacionadas con el ejercicio de la profesión en el campo del Análisis Químico, por ello la asistencia y participación del alumnado en ambas actividades evaluables es OBLIGATORIA, de tal manera que la ausencia o no realización injustificada de estas actividades impedirá superar la materia. Por lo tanto, considerando el carácter teórico-práctico de la asignatura y los resultados de formación y aprendizaje que se persiguen alcanzar con ambas metodologías, el alumnado que opte por la Modalidad de Evaluación Global Final también deberá realizar OBLIGATORIAMENTE estas actividades.

Para SUPERAR la materia será necesario alcanzar una calificación GLOBAL FINAL de 5,0 (sobre 10), una vez sumadas las calificaciones ponderadas obtenidas en las componentes evaluables de la asignatura y descritas con detalle en esta sección

de evaluación. Muy Importante, PARA PODER SUPERAR LA MATERIA (poder sumar las calificaciones obtenidas en cada actividad evaluable), es OBLIGATORIO alcanzar una nota mínima de 4,0 (sobre 10) en cada una de las actividades evaluables mencionadas anteriormente (Prácticas de laboratorio, desarrollo de caso prácticos, exposición y defensa de los mismos). Los alumnos que no cumplan este requisito en la primera oportunidad, serán calificados en el acta con la nota más alta alcanzada en las partes suspensas, y deberán repetir en la segunda oportunidad (convocatoria de Julio) la prueba relativa a la parte o partes en las que no hayan alcanzado el 4,0. Lógicamente, los alumnos que se encuentren en esta situación conservarán la nota de la/s parte/s superada/s (≥4,0) en primera oportunidad.

En la segunda oportunidad de evaluación, tal como fue ya descrito, es OBLIGATORIO alcanzar como mínimo una calificación de 4.0 (sobre 10) en todas las partes objeto de recuperación.

Los alumnos que optan por la modalidad **evaluación global final,** deberán tener en cuenta que las actividades de contenido práctico (seminarios y Prácticas de laboratorio) son de carácter obligatorio, por lo que la evaluación de dichas actividades, se realizará independientemente de la evaluación final.

ATENCIÓN: El alumno que desee optar por la modalidad EVALUACIÓN FINAL deberá informar y entregar un documento escrito y firmado a los docentes responsables de la materia durante las dos primeras semanas desde el inicio de la docencia de la materia correspondiente.

En la presentación de la materia, así como en la pagina de la Facultad de Química disponen de las fechas para las actividades de evaluación.

General description	Computational Chemistry is a discipline using math properties or for the simulation of the molecular bel		for the calculation	on of molecular

Training and Learning Results

Code

A1 Students can apply their knowledge and understanding in a manner that indicates a professional approach to their work or vocation, and have competences typically demonstrated through devising and sustaining arguments and solving problems within their field of study

- B1 Ability for auronomous learning
- B2 Organization and planning capacity
- C36 Know the basics and be able to use different quantum mechanical methods to be applied to systems of chemical interest
- D1 Ability to solve problems

Expected results from this subject				
Expected results from this subject	Tra	aining	and Le	arning
		F	Results	
Describe the main methods of calculation of the computational chemistry, knowing his applications and limitations.			C36	
Describe the elements that can contain a field of strengths of molecular mechanics.			C36	
Choose levels of quantum calculation adapted for the treatment of a chemical problem.	A1	B2	C36	
Describe fundamental algorithms employees in the calculations of computational chemistry.			C36	
Obtain properties of chemical interest doing use of computational methods (static and dynamic).		B1	C36	D1
		B2

General	It is an introductory course in therapeutic che		js work at molec	ular level and processes
description	involved in their in vivo effects will be studied			
	Drug discovery and design strategies, as well	as stages prior to their	commercializatio	on will also be discussed

English Friendly subject. International students may request from the teachers: a) resources and bibliographic references in English, b) tutoring sessions in English, c) exams and assessments in English.

Tra	ining and Learning Results
Coc	le
A3	Students have the ability to gather and interpret relevant data (usually within their field of study) to inform judgments

that include reflection on relevant social, scientific or ethical issues

A4 Students can communicate information, ideas, problems and solutions to both specialist and non-specialist audiences
 B3 Ability to manage information

B4 Ability for analysis and synthesis

C43 Know the chemical compounds with therapeutic application

D3 Ability to communicate in both oral and written form in Spanish and / or Galician and / or English

Expected results from this subject						
Expected results from this subject		Training and Learning				
		I	Results			
Familiarize yourself with fundamental concepts of Therapeutic Chemistry	A4	Β4		D3		
Know the different types of pharmacological targets	A4	B3		D3		
		Β4				
Understand and be able to predict drug-target interactions	A3	B3	C43	D3		
Know the different types of receptors and understand the signal transduction mechanisms.	A3	B3		D3		
	A4	Β4				
Differentiate a chemoterapeutic from a pharmacodynamic agent	A4	B4	C43	D3		
Differentiate an agonist drug from an antagonist and from an inverse agonist	A4	B4	C43	D3		
Relate the physicochemical properties of drugs with their pharmacokinetics.	A3	B3	C43	D3		
Understand and be able to predict metabolic transformations	A3	B3	C43	D3		
Know the different stages of drug development	A4	B3	C43	D3		
Know and understand the strategies involved in discovering and optimizing leads	A4	B4	C43	D3		
Know and understand the computational techniques of molecular modeling: docking strategies,	A4	B3	C43	D3		

QSAR and pharmacophore design

1.1. Concept and objectives of Therapeutic Chemistry.
1.2. Drug nomenclature systems.
1.3. Drug classification systems.
2.1. Types of drug targets and location in cell.
2.2. Drug-target interactions.
2.3. Transport proteins as drug targets.
2.4. Structural proteins as drug targets.

Subject 3. Drug targets: enzymes	 3.1. Enzyme inhibition mechanisms. 3.2. Design of enzyme inhibitors and types of enzyme inhibitors with therapeutic application. 3.3. Isoenzymes as drug targets. 3.4. Measurement and expression of enzyme inhibition.
Subject 4. Receptors	 4.1. Stucture and function of receptors. 4.2. Receptor types and signal transduction mechanisms. 4.3. Agonist, antagonist and inverse agonist drugs. 4.4. Measurement and expression of pharmacological effect.
Subject 5. Drug targets: nucleic acids and other biomolecules	5.1. Nucleic acids as drug targets 5.2. Lipids and carbohydrates as drug targets
Subject 5. Nucleic acids and other biomolecules as drug targets	5.1. Mechanisms of interaction between drugs and nucleic acids.5.2. Lipids and carbohydrates as drug targets.
Subject 6. Pharmacokinetics and related topics	 6.1. Absortion and distribution: mechanisms of transport across biological membranes. 6.2. Drug administration ways. 6.3. Drug metabolism. 6.4. Drug excretion.
Subject 7. Drug discovery and development	7.1. The process of obtaining and getting new drugs to the market.7.2. Lead discovery and optimization strategies.
Subject 8. Rational drug design	8.1. Biochemical based drug design approaches.8.2. Computational aided drug design: docking and QSAR strategies, pharmacophore based drug design approach.

Planning

Laboratory practical	14	14	28
Objective questions exam	0	6	6
Essay questions exam	2	12	14
*The information in the planning table is	for guidance only and does no	ot take into account the het	erogeneity of the students.

Methodologies	
	Description
Lecturing	In these sessions the professor will present in a structured form the general contents of the program, doing emphasis in important or difficult aspects of the subject. In addition, the professor, in advance and through the Moovi platform, will make available to the student the material that will be used in these sessions. In order to better understand the content explanations, students should previously check and complete this material by using the recommended literature.
Seminars	They will devote time to discuss the most complicated aspects of the treated subjects by solving exercises and questions, using molecular modeling programs, as well as presenting review works related with the content of the subject.
Laboratory practical	Laboratory practices will be developed in 4 sessions of 3.5 h each. one session will consist of visiting a pharmaceutical company to learn about their facilities and products.

Three sessions will be devoted to the synthesis and study of different peptidomimetics.

Personalized assistance						
Methodologies	Description					
Lecturing	The teachers will be available to have tutoring sessions with the students, which will be arranged in advance. In the tutoring sessions, either in person or online, such as email or the virtual campus, all queries related to the study of the contents of the subject will be answered.					
Seminars	The teachers will be available to have tutoring sessions with the students, which will be arranged in advance. In the tutoring sessions, either in person or online, such as email or the virtual campus, all queries related to the study of the contents of the subject will be answered.

Tests	Description					

Objective questions exam	The teachers will be available to have tutoring sessions with the students, which will be arranged in advance. In the tutoring sessions, either in person or online, such as email or the virtual campus, all queries related to the study of the contents of the subject will be answered.
Essay questions exam	The teachers will be available to have tutoring sessions with the students, which will be arranged in advance. In the tutoring sessions, either in person or online, such as email or the virtual campus, all queries related to the study of the contents of the subject will be answered.

Assessment						
	Description	Qualification			ing a	
			Le	arnir	ng Res	sults
Seminars	The participation and resolution of all the tasks proposed by the teacher for	25	Α3	Β3	C43	D3
	the seminar classes will be qualified.		_A4	Β4		
Laboratory practical	Attendance at the laboratory practical sessions will be mandatory. The laboratory work will be evaluated with a APT or NO APT. For this evaluation, compliance with the safety regulations related to the handling of chemical substances and waste removal, planning and development of proposed experiments, analysis of results and the laboratory notebook quality will be taken into account. The evaluation will be done through the systematic observation of student work. The mark of the laboratory practices will be obtained from the resolution of the tasks and works proposed by the teachers in relation to the experiments performed and the visit to the industry.		A3	B4	C43	D3
	To pass the subject it is essential to obtain APT at work from laboratory.					
Objective	A short exam (one hour long) will be carried out at week eight. In this exam	20	A3	Β3	C43	
questions exam	will enter the subject explained until that moment.		A4	Β4		
Essay questions	A global exam will be carried on closing date of evaluation in order to	40	A3	Β3	C43	
exam	analyze the adquired competencies.		A4	Β4		

Participation of students in any of the evaluation parts will involve the condition of presented and therefore the obtaining of a qualification. The presentation of some work in seminars, the attendance to laboratory practical (two or more sessions) or the performace of some written exams will be considered evaluation acts.

Students should have a minimum mark in some of the evaluation parts in order to pass the subject (5 or more points). This minimum mark should be of 4 points over 10 in the global exam, as well as in seminars and laboratory practicals. If the required minimums are not obtained, the final mark will be the weighted mark of the highest-scoring failed part (seminars, laboratory practicats or global exam).

Evaluation in the July Call

The mark achieved in seminars and laboratory practical will be manteined (maximun 40%). A written global exam about all theoretical contents of the subject will be performed (60%). In order to pass the subject (global score equal to or greater than 5) in this call, students must achieve a minimum mark of 5 points out of 10 in the written exam.

Students of subsequent enrollment

Those students who were previouly evaluated as APT will be awarded the APT mention for the monitoring of the laboratory practical, not being necessary the completion of the experimental work again. However, they must perform the tasks or works proposed by the teachers in relation to the laboratory practices in order to achieve the mark for the Laboratory practical (15%).

Non-continuous evaluation option

Students who do not wish to opt for continuous assessment must request it from the subject coordinator. This request will be made during the first three weeks of the course. To pass the subject they will have to do the work of laboratory, obtain the APT qualification, and perform a global test in which all the subject contents will be evaluated, including the laboratory practical. The minimum mark of this exam must be 5 points over 10.

*Th	e information in the	planning	table is for	guidance only	and	does not take into	account the	heterogeneity	of the students.

Methodologies	
	Description
Lecturing	Theoretical classes given through an on-screen presentation (available to students on the Moovi platform). In these classes the basic contents will be introduced, emphasizing the most important and difficult issues. Practical examples will be shown.
Problem solving	Aimed at solving problems and/or tasks and discussing them. The necessary material will be provided through the Moovi platform.
Practices through ICT	Application from what is discussed in the lecture and in the problem solving sessions to more general, but related, cases to the subject. Through the Moovi platform, the practice scripts and the work rules in the laboratory will be provided.
Autonomous problem solving	(*)Destinados á resolución de tarifas que integren os contados dados e exerciten as competencias a adquirir. A través da plataforma Moovi proporcionarase o material necesario.

Personalized assistance		
Methodologies	Description	
Lecturing	The student needing help will have the possibility of attend to "special tutorial sessions to solve doubts, mainly following the schedules indicated previously. To optimize the time, it is convenient that the student contacts with the professor with previously enough.	
Practices through ICT	The student needing help will have the possibility of attend to "special tutorial sessions to solve doubts, mainly following the schedules indicated previously. To optimize the time, it is convenient that the student contacts with the professor with previously enough.	
Problem solving	The student needing help will have the possibility of attend to "special tutorial sessions to solve doubts, mainly following the schedules indicated previously. To optimize the time, it is convenient that the student contacts with the professor with previously enough.	
Autonomous problem solving		

Assessment					
	Description	Qualification	Traiı Learni	ning a ng Re	
Problem solving	The students will give all the written work made in the session, such as creation of documents in LaTeX and Fortran/Python source code.	20		C37	D1

Practices through ICT	The students will give all the written work made in the session, such as creation of documents in LaTeX and Fortran/Python source code.	30		B1 B3	C37	D1
Autonomous problem solving	(*)Presentación da resolución de tarefas complexas que integren o coñecementos e competencias da materia.	30	A1	B1	C37	D1
Essay	The students will present the results of their practices made using LaTeX and explaining the design of his applications of Fortran/Python.	20		B1 B2 B3	C37	D1

Methodologies	
	Description
Lecturing	The subject material will be previously provided through the Moovi platform. The teaching staff will present the contents of the subject in a structured manner. Possible doubts arising at the time of the presentation may be clarified during these presentations.
Seminars	The concepts introduced in the master sessions will be worked on through problems and questions formulated by the teaching staff. In addition, the students will work on the concepts learned in class and will solve problems and additional exercises that will be evaluated.
Laboratory practical	The laboratory work will be developed in 4 sessions of 3.5 hours. Students will have to prepare a laboratory notebook with the experiments carried out, where the conclusions derived from the experimental work will also be collected. Additionally, students will answer a series of questions about the work done in the laboratory.

Personalized assistance	
Methodologies	Description
Lecturing	The teacher will clarify the doubts and questions that arise during the exposition of the topics, related to the subject.
Seminars	The teaching staff will explain and resolve the questions raised by the students in relation to the exercises and problems solved in the seminar sessions.
Laboratory practical	The teaching staff will supervise and guide the development of the experiments proposed in the lab sessions. In addition, special attention will be paid to compliance with safety and healthy measures in the laboratory.
Tests	Description
Problem and/or exercise solving	Before each evaluation test (short tests and final exam) the teaching staff will dedicate the necessary time to answer the students' questions related to the subject.
Presentation	The teacher will supervise and guide the development of the work for its subsequent presentation in a seminar session.
Problem and/or exercise solving	

Assessment				
	Description	Qualification	Trainin Learning	5
Seminars	As part of the continuous evaluation, the participation and the resolution of the exercises proposed by the teaching staff in the classroom will be evaluated. The resolution of exercises and additional problems will also be evaluated, similar to those resolved during the seminar sessions, and which will be proposed through the Moovi platform.		A4 C A5	44 D3

Laboratory practical	 It is mandatory to carry out the laboratory practices, as well as to follow the healthy and safety standards in the laboratory and the collection of residues to obtain the PASS condition. In addition, it will be evaluated (20%): the laboratory notebook the resolution of the questions raised in relation to the practices carried out. In order for students to pass the subject, they must obtain the PASS mark in the laboratory practice work. 	20	A5 B5 C44 D2 D3
Problem and/or exercise solving	Two tests will be carried out: The first test on the contents of the first topics, which will mean 20% of the final grade. A minimum grade of 2.5 points out of 10.0 in this test will be required to pass the subject. In the event that the minimum required in any of the tests (first or second) is not exceeded, the final grade obtained in the subject will be the weighted grade of the global evaluation test.	20	A4 B5 C44 D3 A5
Presentation	The students will analyze and explain the research results collected in a recent research article related to the subject of the course in a seminar session. The ability to synthesize and understand the work presented will be valued, as well as the questions that are asked about the other works of the students.	10	A4 B5 C44 D3 A5
Problem and/or exercise solving	Two tests will be carried out: The second test on ALL THE CONTENTS OF THE SUBJECT, which will mean 30% of the final grade. A minimum grade of 4.0 points out of 10.0 in this test will be required to pass the subject. In the event that the minimum required in any of the previous tests is not exceeded, the final grade obtained in the subject will be the weighted grade of the global evaluation test.	30	A4 B5 C44 D3 A5

MINIMUM REQUIREMENTS: The identification of serious conceptual errors will lead to an assignment of specific activities aimed at acquiring those skills. These activities will be evaluated as part of the 20% corresponding to deliverables.

CONDITION OF PRESENTED: The participation of the student in any of the acts of evaluation of the subject will imply the condition of presented and, therefore, the assignment of a grade. Attendance at practical laboratory classes, handing in assignments and/or exercises proposed by the teaching staff, or taking a test will be considered acts of evaluation.

EVALUATION IN JULY: the grade obtained by the students during the course in problem solving, laboratory practices and assignments will be maintained. A test will be carried out on all the theoretical contents of the subject that will account for 50% of the final grade and that will replace the marks of the written tests. It will be necessary to achieve a minimum of 4 points out of 10 in this test to pass the subject and to take into account the rest of the evaluation elements. In case of having a grade of PASS in the laboratory work and having obtained a grade lower than 5 out of 10 in the evaluation of the practices, a written test of the experimental part will be done, which will mean 20% of the final grade.

STUDENTS OF 2nd AND LATER REGISTRATION: Students who have been evaluated with PASS in the laboratory work in a previous course, will be awarded the mention of PASS in the follow-up of the laboratory work in the current academic year, not being necessary to carry out the experiments again. However, a written test of the experimental part must be taken to obtain the qualification corresponding to the experimental part of the subject in the current academic year.

NON-CONTINUOUS ASSESSMENT OPTION: Students who wish not to opt for continuous assessment must request it during the first three weeks of the course from the subject coordinator. To pass the subject, you must complete the Laboratory Practices, obtain a grade of PASS in the work developed in the laboratory and a grade equal to or greater than 5 points out of 10 in the evaluation of the laboratory notebook and the questions related to the practices made. In addition, you must obtain at least 5 points out of 10 in a test in which all the contents of the subject will be evaluated. In this case, the final mark will be a maximum of 2 points for laboratory practices and a maximum of 8 points for the written test.

Training and Learning Results

Code

Contents Topic

A3 Students have the ability to gather and interpret relevant data (usually within their field of study) to inform judgments that include reflection on relevant social, scientific or ethical issues

A4 Students can communicate information, ideas, problems and solutions to both specialist and non-specialist audiences

B2 Organization and planning capacity

B4 Ability for analysis and synthesis

C49 Acquire sufficient knowledge, skills and abilities for the practice of immunochemistry in different fields

D1 Ability to solve problems

D3 Ability to communicate in both oral and written form in Spanish and / or Galician and / or English

D5 Ability to develop their professional activity based on respect for fundamental rights and equal opportunities, within the framework of professional ethics and ethical commitment

Expected results from this subject					
Expected results from this subject			Training and Learning		
		Ī	Results	-	
Identify the cellular and molecular components involved in immune responses.	A3	B2	C49	D1	
Understand the diversity of immune system receptors.	A4	Β4		D3	
Identify the interactions between immune system receptors and their ligands and understand their complexity.				D5	
Understand the different methodologies for obtaining antibodies for subsequent use in the laboratory and/or therapy.					
Understand and manage concepts, terminology, and scientific instrumentation.					

Understand the theoretical and technical aspects of various immunochemical assays.

Develop a procedure to carry out an immunochemical technique in the laboratory.

Apply knowledge and technology related to Immunochemistry in aspects related to the production,

analysis, and diagnosis of biological and/or chemical processes and resources.

Apply Immunochemistry knowledge to isolate, identify, handle, and analyze specimens and

samples of biological and/or chemical origin, as well as to characterize their constituents.

Communicate a critical analysis of a scientific work in writing and orally regarding the application of immunochemical techniques in different fields.

Problem and/or exercise solving

Methodologies	Description
Lecturing	The professor will present the basic foundations and principles of Immunochemistry. The aim of the theoretical classes is for the student to acquire a basic understanding of the fundamental principles of Immunology and their possible application in analysis, diagnosis, and therapy.
Seminars	The seminars will consist of exercises, debates, or tasks that reinforce the knowledge acquired during the lectures. Additionally, practical cases and problems will be included for students to test their knowledge.
Laboratory practical	The laboratory work is aimed at achieving competence and application in immunochemical techniques.

Personalized assistance Methodologies Description				
Lecturing	The master sessions will be participatory. Personalized attention will be provided by the teachers responsible for each topic in the corresponding weekly tutoring hours.			
Seminars	The seminars will be participatory. The responsible professor will be available to solve doubts related with the exercises or any theoretical or practical content.			
Laboratory practical	The responsible professors will provide personalised supervision to each student during laboratory practicals and will give the necessary support for the understanding of the aims, methodology, techniques and interpretation of results.			

Assessment			
	Description	Qualification	 Training and
			Learning Results
Objective	A FINAL WRITTEN EXAM will be conducted, accounting for 40% of the final	40	A3 B2 C49 D1
questions exam	grade for the course. In this mandatory exam, the fundamental contents of the	9	A4 B4 D3
	course (lectures, laboratory practicals, and seminars) will be evaluated		D5
	through OBJECTIVE QUESTIONS (multiple choice and/or short answer).		
Laboratory	The skills and competencies acquired during the laboratory practicals will be	30	A3 B2 C49 D1
practice	CONTINUOUSLY ASSESSED through the presentation of reports, multiple-		A4 B4 D3
	choice and short-answer questions, or problem-solving. The evaluation of the		D5
	practicals will account for 30% of the final grade.		
Problem and/or	The work and participation in the seminars will be CONTINUOUSLY ASSESSED,	30	-
exercise solving	as well as the student's ability to solve problems and exercises. This part will		
5	account for 30% of the final grade.		

Attendance at all in-person activities is MANDATORYto PASS the course (except for duly justified absences). To pass the course, atleast a 5 out of 10 must be obtained on the final written exam. If the finalwritten exam is not passed, the student's grade will be the one obtained in thefinal written exam. Non-attendance at the final written exam will be consideredas not attended. In subsequent sessions, the failed student will only need totake the Final Exam, with the grade obtained in the Continuous Assessment(Laboratory practicals and Seminars) being retained.

ATTENDANCE AT PRACTICALS AND ASSESSMENT:

An attendance of less than 75% of the practical sessions, even if justified, will result in a failing grade for the course. In that case, students would have to undergo a single exam to pass the course, in the form of a written test consisting of two parts:

-70% theoretical part.

-30% practical part.

To pass the course, at least a 5 out of 10 must be be an the single exam. The final grade, in this case, will be 70% of the grade of the single exam and 30% of the grade of the seminars.

Practicum, External practices and clinical practices	0	120	120
Report of practices, practicum and external practice	es O	30	30
*The information in the planning table is for guidance	e only and does n	ot take into account the hete	erogeneity of the students.

Methodologies	
	Description
Practicum, External practices and clinical practices	Students develop activities in a context related to the exercise of a profession, during a certain period, performing the functions assigned and foreseen in the internship proposal.

Personalized assistance				
Methodologies	Description			
Practicum, External practices and clinical practices	The subject coordinator will resolve any doubts on a personalised basis			
Tests	Description			
Report of practices, practicum and external practices The academic tutor will resolve any queries on a personalised basis				

Assessment			
	Description	Qualification	Training and
			Learning
			Results
Practicum, External practices	The qualification will take into account the performance evaluation	80	
and clinical practices	of the student made by the company tutor and the monitoring		
	made by the academic tutor.		
Report of practices, practicum	When concluding the practices, the students will have to deliver to	20	
and external practices	his academic tutor a final memory to be evaluated.		

* This matter will be ruled by the established in the Normative of External Practices of the Degree in Chemistry.

* The academic tutor will make the global evaluation of the external practices (**Annex V**) considering:

(70%) The report made by the company tutor (**Annex IV**) in which it will value elements related with the practices made by the student as punctuality, assistance, responsibility, capacity of work in groups and integration in the company, quality of the work made, etc.

(20%) The memory that students must elaborated at the conclusion of the internship period in which they will have to appear, among others, a concrete and detailed description of the tasks performed and the departments within the company to which the student was assigned, a relation of the problems proposed and the procedure followed for his resolution, the level of integration inside the company and the relations with the personnel and a critical reflection about the education received during the degree studies and its adequation for the realization of external practices. The memory will have a minimum extension of 10 and a maximum of 20 pages of A4 size, including cover, index and annexes. Mminimum margins of 2 cm, size of letter of 12 points, simple leading and paragraph justification are recommended. Tables and figures will appear numbered consecutively along the text and must include a brief heading to describe its content.

(10%) The assessment of the academic tutor (Annex V) of the aptitude and attitude showed by the student during the development of the activities made.

C14 To know the principles of quantum mechanics and its application in the description of the structure and properties of atoms and molecules

- C15 Know the main techniques of structural research, including spectroscopy
- C16 Know the relationship between macroscopic properties and properties of individual atoms and molecules, including macromolecules (natural and synthetic), polymers, colloids, crystals and other materials
- C17 Know the nature and behavior of functional groups in organic molecules
- C18 Know the properties of aliphatic, aromatic, heterocyclic and organometallic compounds
- C19 Know the main synthesic routes in organic chemistry, including the interconversions of functional groups and the formation of carbon-carbon and carbon-heteroatom bonds
- C20 Know the structure and reactivity of the main classes of biomolecules and the chemistry of important biological processes
- C21 Know mathematical concepts based on previous ones and be able to use them in the different contexts of Chemistry
- C22 Know and apply the foundations of Physics necessary to understand the theoretical and practical aspects of Chemistry that need it
- C23 Know the principles and procedures of chemical engineering
- C24 Know the properties and applications of materials
- C25 Safely handle chemical substances, considering their physical and chemical properties, evaluating the risks associated with their use and laboratory procedures and including their environmental repercussions
- C26 Perform correctly usual procedures in the laboratory, including the use of standard chemical instrumentation for synthetic and analytical work
- C27 Demonstrate the ability to observe, monitor and measure chemical processes, by systematically and reliably recording them and presenting reports of the work done
- C28 Interpret data derived from laboratory observations and measurements in terms of their meaning and relate them to the appropriate theory
- C29 Demonstrate ability for numerical calculations and interpretation of experimental data, with correct use of units and estimation of uncertainty
- C30 Ability to understand, interpret and adapt the advances in the field of Analytical Chemistry
- C31 Know the control processes applied in the analytical laboratories to achieve their correct management and ensure the quality of the results
- C32 Acquire basic knowledge on enviromental control and evaluation and agro-food security
- C33 Know the metrology of chemical processes, including quality management
- C34 Select and use different procedures for obtaining and characterizing nanomaterials and know their potential in the development of new applications
- C35 Acquire theoretical and experimental knowledge in advanced aspects of Physical Chemistry
- C36 Know the basics and be able to use different quantum mechanical methods to be applied to systems of chemical interest
- C37 Acquire basic knowledge of programming and be able to use appropriate computer packages to solve problems of chemical interest
- C38 Relate the structural bases of organometallic compounds with their physical, spectroscopic and chemical properties
- C39 Select the appropriate techniques and procedures for problems of structural elucidation, synthesis, isolation and purification of organometallic compounds
- C40 Acquire knowledge about the variety of roles played by metal ions in Biology. Know the biomolecules that contain metal ions
- C41 Evaluate health risk, and environmental and socioeconomic impact of chemical substances
- C42 Know synthetic strategies to obtain stereoselectively compounds with biological activity
- C43 Know the chemical compounds with therapeutic application
- C44 Know the main methods for the study of organic reactions mechanisms
- C45 Apply chemical and chemical engineering knowledge to industrial processes
- C46 Know the principles and procedures of environmental technology applied to the industry
- C47 Know the principles and procedures of industrial health and safety
- C48 Be able to determine the behavior of a material
- C49 Acquire sufficient knowledge, skills and abilities for the practice of immunochemistry in different fields

C50 Know the concepts of company, institutional and legal framework of companies, and organization and management of companies

- D1 Ability to solve problems
- D2 Capacity for teamwork
- D3 Ability to communicate in both oral and written form in Spanish and / or Galician and / or English
- D4 Incorporate criteria of sustainability and environmental commitment into the professional exercise. Acquire skills in the equitable, responsible and efficient use of resources
- D5 Ability to develop their professional activity based on respect for fundamental rights and equal opportunities, within the framework of professional ethics and ethical commitment
- D6 Ability to understand the meaning and application of the gender perspective in different areas of knowledge and professional practice with the aim of achieving a more just and equal society

Methodologies

Description

Individual work that each student will make of autonomous form under the supervision of one or two tutors. The allocation of the subject of work will do in accordance with the Rule of the TFG of the Faculty of Chemistry.

Description

Personalized assistance

TFG is ruled by the norms approved in the Junta de Facultad and published in the web page web of the faculty. The TFG Commission will do public, with sufficient advance, the criteria of evaluation that will use the tutor and the jury. The TFG Commission will do public, with sufficient advance, the conditions for the written report and the public defences. All the information generated by the TFG Commission will be included in the TFE module and/or in the web page of the faculty.
