Web	http://masteroceanografia.com/			
General description	Study of the main physical processes, paying attention to their time and spatial scales.			

Training and Learning Results	
Code	
A2	Students who can apply their knowledge and understanding, and problem solving abilities in new or unfamiliar environments within broader (or multidisciplinary) contexts related to their field of study
A4	Students who can communicate their conclusions, and the knowledge and rationale underpinning these, to specialist and nonspecialist audiences clearly and unambiguously
B1	The students will understand in a detailed and based form the theoretical and practical aspects and the work methodology of the oceanography
B4	The students will be able to analyse oceanographic databases and obtain skills for their treatment.
C1	The students will be able to obtain advanced and relevant knowledge, of skilled and multidisciplinary character, in the field of the oceanography and their application to the marine environment
C3	The students will analyse situations and specific oceanographic conditions related with the global change
D1	The students will know and will be able to apply the scientific method in the academic and research fields.
D3	The students will be able to communicate the obtained information and their conclusions in a effective way to the general public, to other scientists and to the competent authorities, listening and answering of effective form and, using an appropriate language to the audience and to the context

Expected results from this subject	Training and Learning Results
To deep understand of the physical processes that occur in the ocean	A2 A4 B1 B4 C1 C3 D1 D3
To adquire understanding about the effects of the coastal boundaries in those processes.	B1 C1
To achieve the skill of analyze experimental data by means of low level languages.	A2 C1 C3 D3

Contents	
Topic	
Theorists: Dynamics of the superficial and deep circulation.	Mesoscale processes. Upwelling. Influence of coastal outlines. The deep circulation and the climatic change. Dynamics of the superficial circulation.
Practical: Time series processing	Case studies of regional interest Time series processing

Planning			
	Class hours	Hours outside the classroom	Total hours
Lecturing	26	27	53
Seminars	24	23	47

Presentation	Oral individual presentations by students.	20	A2	B4	C1	D3

Other comments on the Evaluation

Non attendance to required activities make impossible submission to the second opportunity as well as to the global evaluation.

Students are strongly requested to fulfil a honest and responsible behaviour. It is considered completely unacceptable any alteration or fraud (i.e., copy or plagiarism) contributing to modify the level of knowledge and abilities acquired in exams, evaluations, reports or any kind of teacher□s proposed work. Fraudulent behaviour may cause failing the course for a whole academic year. An internal dossier of these activities will be built and, when reoffending, the university rectorate will be asked to open a disciplinary record

The dates of the evaluation tests can be seen in: http://masteroceanografia.com/horarios/

Subjects that it is recommended to have taken before

Physical Oceanography/V10M153V01CF101

Other comments

If any student did not come from Marine Science studies, the previous study of the matter "Physical Oceanography" is strongly recommended.

Students willing so could attend personal tutorials to solve doubts and/or uncertainties. To better optimise the procedure, the student is requested to previously contact his/her teacher with reasonable anticipation. Students are strongly requested to fulfil honest and responsible behaviour. It is considered completely unacceptable any alteration or fraud (i.e., copy or plagiarism) contributing to modify the level of knowledge and abilities acquired in exams, evaluations, reports or any kind of teacher□s proposed work. Fraudulent behaviour may cause failing the course for a whole academic year. General description	This course addresses the trophic organisation and ecological functioning of pelagic communities, paying special attention to physical-biological coupling at different scales. Control factors of primary production and the role of the pelagic ecosystem in global biogeochemical cycles are studied. The course includes local oceanography case studies of the NW Iberian peninsula.			

Training and Learning Results	
Code	
A1	Students who have demonstrated knowledge and understanding that is founded upon and extends and/or enhances that typically associated with the first cycle, and that provides a basis or opportunity for originality in developing and/or applying ideas, often within a research context
A2	Students who can apply their knowledge and understanding, and problem solving abilities in new or unfamiliar environments within broader (or multidisciplinary) contexts related to their field of study
B1	The students will understand in a detailed and based form the theoretical and practical aspects and the work methodology of the oceanography
B3	The students will be able to deepen in the main oceanographic processes and their spatiotemporal scales
C1	The students will be able to obtain advanced and relevant knowledge, of skilled and multidisciplinary character, in the field of the oceanography and their application to the marine environment
C3	The students will analyse situations and specific oceanographic conditions related with the global change
D1	The students will know and will be able to apply the scientific method in the academic and research fields.
D3	The students will be able to communicate the obtained information and their conclusions in a effective way to the general public, to other scientists and to the competent authorities, listening and answering of effective form and, using an appropriate language to the audience and to the context

Expected results from this subject	Training and Learning Results
Interpretation of distribution patterns of planktonic organisms as well as fundamental biological processes.	A1 B3 C1 C3
Familiarise with advanced methodological tools for the study of pelagic ecosystems	A2 B1 D1
Understanding the way in which different key processes (physical, chemical and biological) interact in the ocean, using exhaustive analysis of regional cases	C1 C3 D3

Contents	
Topic	
Introduction	Pelagic ecosystems and their interactions with hydrodynamics. Key functional groups in the plankton. Production and fate of organic matter.
Physical-biological coupling in pelagic ecosystems	Scales of variability in the interaction between physical and biological processes: mixing and stratification, internal waves, frontal systems, sub- and meso-scale structures.
Plankton size structure: ecological and biogeochemical implications	Size-dependence of phytoplankton abundance, biomass and metabolism. Plankton size spectra. Environmental and ecological control of size structure.

Trophic analysis of pelagic ecosystems	Pelagic food webs. Bacteria-phytoplankton coupling. Grazing and mixotrophy. Structure of planktonic communities and biogeochemical circulation.
The role of pelagic ecosystems in global biogeochemical cycles.	Controlling factors of primary production. Processes and patterns of ocean nutrient limitation. The spring bloom: underlying mechanisms. The biological pump and the global carbon cycle.
Regional oceanography: the upwelling system of NW Iberian peninsula	Ecological and biogeochemical impact of the Galician upwelling. Links between size structure and metabolic balance in Ría de Vigo. Irradiance and nutrients as controlling factors of phytoplankton growth. Responses of microbial plankton to global change processes.

Planning

Methodologies

	Description
Lecturing	Fundamental theoretical contents are explained, supported by visual material and key review articles.
Seminars	Using data from articles and/or databases, theoretical concepts are applied quantitatively, so that a deep understanding of the topics can be obtained (E. Marañón).
Seminars	Using data from articles and/or databases, theoretical concepts are applied quantitatively, so that a deep understanding of the topics can be obtained (B. Mouriño).
Mentored work	The students prepare a group project that consists in a bibliographic review. The students work under the supervision of the professor. The oral presentation of the work is followed by a debate session.
Presentation	Oral presentation of mentored work

Personalized assistance

Methodologies	Description
Lecturing	The students are supervised by the instructor during the preparation of the seminar. Tutorial hours are also used to solve any difficulties related to the acquisition of knowledge and skills.
Mentored work	The students are supervised by the instructor during the preparation of the seminar. Tutorial hours are also used to solve any difficulties related to the acquisition of knowledge and skills.
Presentation	The students are supervised by the instructor during the preparation of the seminar. Tutorial hours are also used to solve any difficulties related to the acquisition of knowledge and skills.

Assessment

	Description	Qualification	Training and Learning Results
Seminars	Evaluation of the understanding of the different concepts and processes treated during the theoretical classes and the seminars (E. Marañón). The proof consists of short questions.	17	A1 B1 C1 A2 B3 C3

General description	In this matter tackle appearances advanced of the chemical oceanography and his relation with the biological processes, physicists and geological. It does emphasis in the thermodynamic and kinetical **appearances of the processes of exchange between compartments, establishing flows between them and standing out the importance in the generation of vertical flows.			

Training and Learning Results	
Code	
A1	Students who have demonstrated knowledge and understanding that is founded upon and extends and/or enhances that typically associated with the first cycle, and that provides a basis or opportunity for originality in developing and/or applying ideas, often within a research context
A4	Students who can communicate their conclusions, and the knowledge and rationale underpinning these, to specialist and nonspecialist audiences clearly and unambiguously
B2	The students will interpret the behaviour of the global oceanic system and their controlling factors.
B5	The students will be able to develop the sufficient autonomy to participate in research projects and scientific collaborations, especially in interdiscipinary contexts
C1	The students will be able to obtain advanced and relevant knowledge, of skilled and multidisciplinary character, in the field of the oceanography and their application to the marine environment
C4	The students will be able to apply in the practice the obtained knowledge and issue resolutions and judgments in the different oceanography fields
D1	The students will know and will be able to apply the scientific method in the academic and research fields.
D4	The students will be able to understand the need and obligation to perform a continuous training, to a large extent autonomous, for the scientific development, updating the knowledges, skills and attitudes of the professional competences along the life.

Expected results from this subject	
Expected results from this subject	Training and Learning Results
Understand and explain from a theoretical and practical point of view the chemical processes that take place in half marine and that are related with the biological processes, physicists and geological that produce in a multicomponent system as it is the ocean and his importance in the generation of vertical profiles.	A1 A4 B2 B5 C1 C4 D1 D4
Comprise the importance of the thermodynamic and kinetical aspects of the processes of exchange of compounds between the atmosphere, the ocean and the sediments, doing a special reference to the methodologies employed to establish flows between environmental compartments.	A1 A4 B2 B5 C1 C4 D1 D4

Understand the behaviour of the C, N, P and Si from a global perspective, basing in the approach of biogeochemical cycles that put of self-evident to importance of the processes of vertical transport in the ocean.	A1 A4 B2 B5 C1 C4 D1 D4
Understand the variables that affect to the biogeochemical cycle of the metals traces in the oceans and purchase the necessary methodology for the study.	A1 A4 B2 B5 C1 C4 D1 D4

Contents	
Topic	
Approximations used in the biogeochecmical models.	Environmental compartments. Main flows between the environmental compartments. Equilibrium and kinetical models.
Models and parametrizations used to characterise the exchange of gases through the interphase waters-atmosphere.	Dissolution of gases in the atmosphere. I exchange atmosphere ocean. Structural appearances of the solubility in gases.
Reactivity of the elements in the superficial waters, transport of the particulate material and segregation in the deep ocean.	Properties of the superficial waters. Introduction to the 1D models with advention + diffusion + reaction through the column of sediments.
Biogeochemical cyles in the ocean.	Training, dissolution and preservation of calcium carbonate and opal.
Vertical transport of organic matter and remineralization.	Dissolved and particulate organic matter in the ocean. Sources of organic matter. Importance of the cycles of the C, O, N and P.
Reactivity and biogeochemical cycles of metals in the ocean	Processes related with the complexation of metals. Chemical speciation under the influence of future changes.

Methodologies	
	Description
Project based learning	It consists in the exhibition of contents by part of the professor, analysis of competitions, explanation and demonstration of capacities, skills and knowledges in the classroom, using like methodology to participatory masterclass and in which the function of the professor is to explain the theoretical foundations of the distinct matters.
Seminars	Sessions of groupal work oriented by the professor, whose purpose is the research of data or information in libraries, databases, internet, etc. The professor indicates the need of extension of knowledges and orients in the research. This methodology carries implicit a load of work no face-to-face significant that it will have to be quantified in the programming of each matter, matter or module.
Practices through ICT	Session of groupal work for the resolution of problems in the classroom of computing, supervised by the professor. Significant construction of the knowledge through the interaction and activity of the student.
Laboratory practical	Activities developed in spaces and with specialized equipments that improve the significant construction of the knowledge through the interaction and activity of the student. It is carried out at th laboratory and the function of the professor is to present the aims, orient the work and realise the follow-up of the student.

Mentored work	Realisation in group of a work on a subject of the matter with participation shared. The professor presents the aims, orients and tutorizes the work, with participation shared with the students.
Presentation	Exhibition in group of the tutored work.
Seminars	Significant construction of the knowledge through the interaction between tutor and student by means of sessions of tutorial activities personalised or in group very reduced, where the professor orients and resolves doubts.

Personalized assistance

Methodologies	Description
Project based learning	Any doubts that arise to the students, can consult it through the forums that are enabled for this on the platform Moovi, being able to be answered by both the faculty and the rest of the students. In addition, they can arrange a personal appointment with the faculty to attend to their questions in their respective office or in the virtual office (campusremotouvigo.gal).

Tests	**Description**
Problem and/or exercise solving	In the review of examinations

Assessment

	Description	Qualification	Training and Learning Results			
Laboratory practical	The learning attitude will be evaluated during visits to the IIM-CSIC research laboratories.	25	A1 A4	B5	C1 C4	D1 D4
Mentored work	Students will present a working report of the supervised project using ICT technologies.	25	A1 A4	B2 B5	C1 C4	D1 D4
Presentation	The students will exhibit the supervised work done using ICT technologies.	10	A4		C4	D1
Problem and/or exercise solving	The student will have to answer succinctly a series of questionnaires that will be carried out throughout the course. The ability to understand and relate the concepts learned during the course will be evaluated.	40	A1 A4	B2 B5	C1 C4	D1 D4

Other comments on the Evaluation

To pass the subject, each and every test conducted throughout the subject must be passed with a minimum rating of 5 points.

In the event that in any test the minimum grade is not reached, the questionnaire will be repeated or a new paper will be delivered with the relevant corrections in the July call.

The official dates of evaluation can be found in this link:

http://masteroceanografia.com/horarios/

Recommendations

Other comments

The student who wishes, can attend personalized tutorials to solve doubts. To optimize the time, it is necessary for the student to contact the teacher well in advance.

Students are required to teach this subject, responsible and honest conduct. Any form of fraud (e.g. copying and/or plagiarism) aimed at distorting the level of knowledge or skill achieved by students in any type of test, report or work designed for this purpose is inadmissible. Fraudulent conduct may be suspended during a full course. An internal register of these proceedings shall be kept in order to request the Rectorate to open disciplinary proceedings in the event of a repeat offence.

General description	This subject tackles the knowledge of the geological processes that take place in the marine field from the line of coast until the abyssal plain. They will analyse the processes of transport and sedimentation that control the movement of sediment and the sedimentary structures resultant in the different marine environments. Also it tackles the sismoestratigraphical interpretation, like tool for the interpretation of sequences and geological cycles in the differents sedimentary environments. The practical content of the subject will consist in a field trip of several days of length to see different ancient sedimentary environments. It proposes visit the neogen basins of Sorbas; Nijar and Tabernas in the province of Almería for the characterisation in situ of the lithology, the facies and the sedimentary architecture of a wide variety of environments (alluvial fans, beaches, deltas, reefs, carbonatic shelfs, evapories, slumps, debris flows, turbidites, pelagic), as well as the sedimentary processes and tectonic that have controlled his origin and space-temporary evolution .			

Training and Learning Results	
Code	
A3	Students who have the ability to integrate knowledge and handle complexity, and formulate judgments with incomplete or limited information, but that include reflecting on social and ethical responsibilities linked to the application of their knowledge and judgments
A4	Students who can communicate their conclusions, and the knowledge and rationale underpinning these, to specialist and nonspecialist audiences clearly and unambiguously
B1	The students will understand in a detailed and based form the theoretical and practical aspects and the work methodology of the oceanography
B5	The students will be able to develop the sufficient autonomy to participate in research projects and scientific collaborations, especially in interdiscipinary contexts
C3	The students will analyse situations and specific oceanographic conditions related with the global change
C4	The students will be able to apply in the practice the obtained knowledge and issue resolutions and judgments in the different oceanography fields
D1	The students will know and will be able to apply the scientific method in the academic and research fields.
D3	The students will be able to communicate the obtained information and their conclusions in a effective way to the general public, to other scientists and to the competent authorities, listening and answering of effective form and, using an appropriate language to the audience and to the context

Expected results from this subject	
Expected results from this subject	Training and Learning Results
Capacity to interpret seismic profiles. Recognise inside the context of the sequential stratigraphy the courtships *sedimentarios and his relation with the stages *eustáticas.	A3 B1 B5 C3 C4 D1 D3

Capacity for the integration of data and interpretation of the physical and geological processes in oceanic environments.	A3 B1 B5 C3 C4 D1 D3
Capacity for the recognition and interpretation of sequences and cycles.	A3 B1 C3 C4 D1
Capacity to identify the means *sedimentarios, his processes associated and the factors that have controlled his evolution *espaciotemporal.	A3 B1 C3 C4 D1
Capacity to evaluate the economic potential of the oceanic basins with regard to diverse geological resources.	A3 A4 B1 C4 D1 D3

Contents	
Topic	
T1.Tectonic and geomorphological configuration of the oceanic bottom. Introduction to basin analysis. Types of basins. Tectonic and sedimentation.	The sub-topic coincides with the topic
T2. Geological processes in coastal environments	The sub-topic coincides with the topic
T3. Processes in of continental shelf environments	The sub-topic coincides with the topic
T4. Origin and distribution of marine sediments	The sub-topic coincides with the topic
T5. Processes of resedimentation associated to the continental slope: turbidites	The sub-topic coincides with the topic
T6. Processes in hemipelagic and pelagic environments	The sub-topic coincides with the topic
T7. Evolution of continental margins and oceanic basins. Interaction between the internal and external geological processes: the case of the Alboran Sea basin.	The sub-topic coincides with the topic
T8. Seismic-stratigrafical interpretation of marine sedimantary environments..	The sub-topic coincides with the topic
P1. Geological characterisation of coastal environments	Practical contents developed in the Field Trip of Almería
P2. Identification and characterisation of shelf environments	Practical contents developed in the Field Trip of Almería
P3. Characterisation of continental slope environments	Practical contents developed in the Field Trip of Almería
P4. Caracerización of pelagic environments	Practical contents developed in the Field Trip of Almería
P5. Space-temporary evolution of continental margins and oceanic basins. Filling of basins: budget-tectonic-sedimentation relations	Practical contents developed in the Field Trip of Almería

Methodologies	
	Description

Lecturing	It consists in the exhibition of contents by part of the professor, analysis of competitions, explanation and demonstration of capacities, skills and knowledges in the classroom, using like methodology the participatory masterclass and in which the function of the professor is to explain the theoretical foundations of the matter.
Introductory activities	It will contextualise the subject inside the *master as well as the zone of exit of studies.
Studies excursion	Session of work *grupal in practices of field, under the supervision of the professor, making possible the significant construction of the knowledge through the interaction and activity of the student and his contact with the reality where has to apply his knowledges. Attendance is compulsory. It will do a route by the outcrops *Neógenos of several basins *sedimentarias of the *sureste peninsular in which there is glorious examples of half *sedimentarios marine fossils, that include platforms *carbonatadas, *turbiditas, *evaporitas, reefs, *sedimentación *pelágica, etc.
Problem solving	

Personalized assistance

Methodologies	Description
Lecturing	The students will be attended of personal form by any one of the professors that give the matter, by means of concerted previous appointment by email. Likewise, they will be attended in front of any query during the development of the lessons *magistrales.
Studies excursion	The students will be attended of personal form by any one of the professors that give the matter, by means of concerted previous appointment by email. Likewise, they will be attended in front of any query during the development of the exits of studies.
Introductory activities	The students will be attended of personal form by any one of the professors that give the matter, by means of concerted previous appointment by email. Likewise, they will be attended in front of any query during the development of the introductory activities.
Problem solving	

Assessment

	Description	Qualification	Training and Learning Results			
Lecturing	They will evaluate the knowledges purchased by means of written/oral exams	40	A4	B1		
Studies excursion	The evaluation features of two parts: assistance to the fieldtrip and the elaboration of a written work including the most important aspects adquired in the field.	40	A3 A4	B5		D1 D3
Problem solving	The students will carry out several Tests related to the Theoretical classes.	20	A3 A4	B1	C3 C4	

Other comments on the Evaluation

The fieldtrip (Studies excursion) is of experimental character and therefore his assistance is MANDATORY. In case of no assistance without any justification, students will not be able to opt for a global assessment.
All tests can be evaluated on the second chance. Non attendance to mandatory activities precludes the possibility to be evaluated in the second chance.
The official dates for the proofs of evaluation can consult in: http://masteroceanografia.com/horarios/
Requires of the students that curse this matter a responsible and honest behaviour. It considers inadmissible any form of fraud (copy or plagiarism) directed to *falsear the level of knowledges and skills reached in all type of proof, report or work. The fraudulent behaviours will be able to suppose suspend the subject during a complete course. It will carry an internal register of these performances so that, in case of *reincidencia, request the opening to the rectorship of a disciplinary

General description	Climate models course will deal about the different types of models that are used for the study of the climate as well as its evolution over the years. You will see different models and their output files in order to learn how to treat and analyze their results. Finally, we will know the climatic models, their function and their main characteristics.			

Training and Learning Results	
Code	
A1	Students who have demonstrated knowledge and understanding that is founded upon and extends and/or enhances that typically associated with the first cycle, and that provides a basis or opportunity for originality in developing and/or applying ideas, often within a research context
A5	Students who have the learning skills to allow them to continue to study in a manner that may be largely self-directed or autonomous.
B2	The students will interpret the behaviour of the global oceanic system and their controlling factors.
B5	The students will be able to develop the sufficient autonomy to participate in research projects and scientific collaborations, especially in interdiscipinary contexts
C3	The students will analyse situations and specific oceanographic conditions related with the global change
C7	The students will obtain knowledge that will allow them reinforce and deepen in the physical mechanisms that control the atmosphere-ocean interactions, the climatic variability, as well as the validity and contrast of climatic models.
D2	The students will possess the handle skills in the laboratory that allow them to develop autonomous work.
D4	The students will be able to understand the need and obligation to perform a continuous training, to a large extent autonomous, for the scientific development, updating the knowledges, skills and attitudes of the professional competences along the life.

Objective questions exam	Short questionnaires about the content of the subject.	20			C3 C7	

Other comments on the Evaluation

The preferred assessment method is Continuous Evaluation. Students who wish to take the Global Evaluation (100% of the grade based on the official exam) must inform the course instructor, via email or through the Moovi platform, within one month from the start of the course.

Attendance to lectures, especially seminars, is mandatory.

Students who are unable to attend classes due to justified reasons must provide appropriate justification. Evaluation will be conducted through complementary assignments proposed by the professor, depending on the circumstances.

Online tutoring sessions will be available through the virtual office of each professor on Campus Remoto, by appointment.

All tests are evaluable on the second chance. Non-attendace to lectures and seminar precludes the possibility to be evaluated in the second chance.

Exam Dates:

The dates of the exams can be consulted at: http://masteroceanografía.com/horarios/

Any changes in the dates of officially approved exams will be published on the notice board and on

the Center's website.

Other comments

Students willing so could attend personal tutorials to solve doubts and/or uncertainties. To better optimise the procedure, the student is requested to previously contact his/her teacher with reasonable anticipation. Students are strongly requested to fulfil honest and responsible behaviour. It is considered completely unacceptable any alteration or fraud (i.e., copy or plagiarism) contributing to modify the level of knowledge and abilities acquired in exams, evaluations, reports or any kind of teacher□s proposed work. Fraudulent behaviour may cause failing the course for a whole academic year. An internal dossier of these activities will be built and, when reoffending, the university rectorate will be asked to open a disciplinary record

Teaching language	Spanish			
Department				
Coordinator	Marino , Gianluca			
Lecturers	Marino , Gianluca Rey García, Daniel			
E-mail	gianluca.marino@uvigo.es			
Web	http://masteroceanografia.com/			
General description	The course focuses on the study of the ocean and climate before the period covered by instrumental measurements (approximately 1850 to the present), which represents a very small fraction (<10^−7) of the history of our planet. Therefore, instrumental records offer an incomplete view of the time scales and patterns of change in the ocean and climate. Palaeoclimatology and palaeoceanography provide a comprehensive framework to understand temperature changes, precipitation patterns, ice-sheet evolution, and biosphere adaptation across a wide range of climate states and boundary conditions. This advances the debate on how the high levels of greenhouse gases predicted for the 21st century and beyond will affect key elements of the climate system. Paleoclimatology and paleoceanography are fields within Earth Sciences that have significantly expanded their scope in recent decades. This partly arises from the knowledge of the natural patterns of change and variability in Earth's climate system that these disciplines contribute, contextualising future changes influenced by human activity. Another key factor is tied to the rapid development of methodological and analytical approaches, which are largely diversified and become (more) quantitative. These advancements are the result of multidisciplinary efforts involving sedimentologists, geochemists, geophysicists, biologists, (micro)paleontologists, geostatisticians, and modelers. Palaeoclimatology and palaeoceanography provide essential information for the ocean and climate communities. This is exemplified by their contribution to the reports of the Intergovernmental Panel on Climate Change (IPCC), which in the last almost two decades include chapters specifically dedicated to palaeoclimate and palaeoceanography. In the most recent report, such information is integrated into the assessment report's findings as one of the "multiple lines of evidence" to define the state of Earth's climate. The course focuses on analyzing the pace, magnitude, and rates of changes in the ocean and climate through the geological timescale and from the instrumental record, with special emphasis on those changes taking place in the ocean. The following topics are explored, the: (i) different time scales (from 10^1 to 10^8 years) and patterns of climate change; (ii) research tools used to reconstruct the (paleo)ocean and (paleo)climate; and (iii) relationship between forcings, feedback processes, and the responses of the climate system, especially regarding temperature variations.			

Training and Learning Results	
Code	
A1	Students who have demonstrated knowledge and understanding that is founded upon and extends and/or enhances that typically associated with the first cycle, and that provides a basis or opportunity for originality in developing and/or applying ideas, often within a research context
A2	Students who can apply their knowledge and understanding, and problem solving abilities in new or unfamiliar environments within broader (or multidisciplinary) contexts related to their field of study
A4	Students who can communicate their conclusions, and the knowledge and rationale underpinning these, to specialist and nonspecialist audiences clearly and unambiguously
A5	Students who have the learning skills to allow them to continue to study in a manner that may be largely self-directed or autonomous.
B2	The students will interpret the behaviour of the global oceanic system and their controlling factors.
B3	The students will be able to deepen in the main oceanographic processes and their spatiotemporal scales
C1	The students will be able to obtain advanced and relevant knowledge, of skilled and multidisciplinary character, in the field of the oceanography and their application to the marine environment
C3	The students will analyse situations and specific oceanographic conditions related with the global change
C7	The students will obtain knowledge that will allow them reinforce and deepen in the physical mechanisms that control the atmosphere-ocean interactions, the climatic variability, as well as the validity and contrast of climatic models.
D2	The students will possess the handle skills in the laboratory that allow them to develop autonomous work.

D3 The students will be able to communicate the obtained information and their conclusions in a effective way to the general public, to other scientists and to the competent authorities, listening and answering of effective form and, using an appropriate language to the audience and to the context

Expected results from this subject

Contents	
Topic	
Topic 0. Introduction to the subject	0.1. Objectives 0.2. Organization of topics and contents; 0.3. Laboratory practicals and seminars; 0.5. Assessment.

Topic 1. Basic concepts and (paleo)climate change	1.1. Earth's climate; 1.2. Time scales of climate change; 1.3. Climate change and variability 1.4. Earth's energy balance and (palaeo)temperature; 1.5. Forcing mechanisms, feedback, and response; 1.6. Equilibrium climate sensitivity and temperature thresholds.
Topic 2. Archives and proxies	2.1. Introduction to the concepts of archive and proxy in palaeoclimatology and palaeoceanography; 2.2. Types of archives; 2.3. Micropaleontological proxies and transfer functions; 2.4. Geochemical proxies in foraminifera; 2.5. Environmental magnetism; 2.6. Sedimentological proxies; 2.7. Uncertainty analysis in palaeoclimate reconstructions.
Topic 3. Chronologies	3.1. The importance of chronology for deciphering time and rates of climate change; 3.2. Radiometric dating methods (e.g., radiocarbon and uranium-thorium); 3.3. Oxygen isotope stratigraphy and stratigraphic correlations.
Topic 4. Climate change at the tectonic scale	4.1. Plate tectonics, weathering, CO2, and long-term climate; 4.2. Icehouse and Greenhouse climates.
Topic 5. Climate change at the orbital scale	5.1. Astronomical control of solar radiation; 5.2. Insolation and climate; 5.5. The ~40,000- and ~100,000-year climate cycles.
Topic 6. Suborbital climate variability	6.1. Patterns and mechanisms of sub-orbital climate variability; 6.2. Dansgaard-Oeschger and Heinrich events; 6.3. Northern Hemisphere ice sheets, Atlantic meridional overturning circulation, and solar activity.
Topic 7. Solid Earth, ocean, and atmospheric CO2 variations	7.1. Reservoirs of carbon in the Earth's system; 7.2. Solid Earth and the long-term carbon cycle; 7.3. Weathering and atmospheric CO2; 7.4. Ocean carbonate chemistry and the carbonate compensation feedback; 7.5. The role of the ocean in glacial-interglacial variations in atmospheric CO2 concentrations.
Laboratory practicals	Quantitative exercises and/or practical, analytical examples related with the subjects developed during the course. The course involves 3 laboratory practicals: Laboratory practical 1 (foraminiferal proxies); Laboratory practical 2 (climate sensitivity); Laboratory practical 3 (magnetism applied to palaeoclimatology).
Seminars	The course includes 3 seminars that will deepen some of the main topics of the course (patterns of palaeoclimate change, palaeoclimate proxies, ocean-atmosphere interactions, palaeoclimate variability).

Planning

	Class hours	Hours outside the classroom	Total hours

Seminars	6	3	9
Presentation	2	5	7
Essay	0	5	5
Laboratory practice	0	3	3

*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies

	Description
Lecturing	Lectures on the 7 topics of the program. Coverage of the topics will be flexible to address questions and issues that may arise over the duration of the course. Some lectures will be given by (foreigner) guest lecturers and done by remote-connection.
Laboratory practical	They illustrate those methods and protocols that are commonly used to generate sedimentological, geophysical, and/or geochemical data from deep-sea sediment cores. Laboratory practicals will centre on: (1) foraminifera as proxies os past ocean conditions; (2) the topic climate sensitivity based on palaeoclimate data; and (3) on the methods of magnetism applied to palaeoclimate research. Attendance is mandatory.

Presentation	Oral presentations on topics that are related to those addressed during the lectures.
Seminars	Additional presentations centred on specific, timely topics within the wider fields of palaeoclimatology and paleoceanography (patterns of palaeoclimate change, palaeoclimate proxies, ocean-atmosphere interactions, palaeoclimate variability). Attendance is mandatory.

Personalized assistance

Methodologies	Description
Lecturing	Questions and doubts that may arise during lectures will be addressed during tutorials. In order to schedule a tutorial students and/or group of students should contact the professors well in advance in order to efficiently schedule the tutorial.
Laboratory practical	Questions and doubts that may arise during laboratory practicals will be addressed during tutorials. In order to schedule a tutorial students and/or group of students should contact the professor well in advance in order to efficiently schedule the tutorial.
Presentation	Prior to the final presentation the students can contact the professors in order to be advised about literature material that could be used to develop the presentation topic.
Seminars	Questions and doubts that may arise during seminars will be addressed during tutorials. In order to schedule a tutorial students and/or group of students should contact the professors well in advance in order to efficiently schedule the tutorial.

Assessment

	Description	Qualification	Training and Learning Results			
Presentation	Oral presentation on a topic related to those developed during the course.	40	A1 A4		C3	D3
Essay	Short, written reports on two topics related to those developed during the course.	40		B2 B3	C1 C7	
Laboratory practice	Exercises related to the laboratory practicals.	20	A2 A5	B3		D2

Other comments on the Evaluation

Attendance at seminars and laboratory practicals is mandatory and constitutes an essential requirement to obtain a passing evaluation. Students who cannot attend any of these activities are expected to provide an adequate justification. Otherwise, absence will result in the loss of the option for a second opportunity, which consists of an oral presentation on a topic related to the content covered during the course.

The oficial dates of evaluation tests will be available at: http://masteroceanografia.com/horarios/

All tests can be evaluated on the second chance.

Students are strongly requested to fulfil an honest and responsible behaviour. It is considered completely unacceptable any alteration or fraud (i.e., copy or plagiarism) contributing to modify the level of knowledge and abilities acquired in exams, evaluations, reports or any kind of teacher□s proposed work. Fraudulent behaviour may cause failing the course for a whole academic year. An internal dossier of these activities will be built and, when reoffending, the university rectorate will be asked to open a disciplinary record.

Geological Processes in Continental Margins and Ocean Basins/V10M153V01104

Other comments

Students willing so could attend personal tutorials to solve doubts and/or uncertainties. To better optimise the procedure, the student is requested to previously contact his/her teacher with reasonable anticipation. Students are strongly requested to fulfil a honest and responsible behaviour. It is considered completely unacceptable any alteration or fraud (i.e., copy or plagiarism) contributing to modify the level of knowledge and abilities acquired in exams, evaluations, reports or any kind of teacher□s proposed work. Fraudulent behaviour may cause failing the course for a whole academic year. An internal dossier of these activities will be built and, when reoffending, the university rectorate will be asked to open a disciplinary record.

Atmosphere-Ocean Interaction

Subject	Atmosphere-Ocean Interaction			
Code	V10M153V01207			
Study programme	Máster Universitario en Oceanografía			
Descriptors	ECTS Credits	Choose	Year	Quadmester
	5	Optional	1st	2nd
Teaching language	#EnglishFriendly Spanish			
Department				
Coordinator	Castro Rodríguez, María Teresa de			
Lecturers	Castro Rodríguez, María Teresa de Des Villanueva, Marisela Gimeno Presa, Luís Nieto Muñiz, Raquel Olalla Sorí Gómez, Rogert			
E-mail	mdecastro@uvigo.es			
Web	http://masteroceanografia.com/			
General description	The atmosphere and the ocean are two physical systems that interact and are joined up. In this subject study all those processes that involve the interaction between the ocean and the atmosphere as well as his exchanges. English Friendly subject: International students may request from the teachers: a) resources and bibliographic references in English, b) tutoring sessions in English, c) exams and assessments in English. Matter of the program *English *Friendly: The/ace international students will be able to request to the *profesorado: to) material and bibliographic references for the follow-up of the matter in English, *b) attend the *tutorías in English, *c) proofs and evaluations in English.			

Training and Learning Results

Code	
A1	Students who have demonstrated knowledge and understanding that is founded upon and extends and/or enhances that typically associated with the first cycle, and that provides a basis or opportunity for originality in developing and/or applying ideas, often within a research context
A2	Students who can apply their knowledge and understanding, and problem solving abilities in new or unfamiliar environments within broader (or multidisciplinary) contexts related to their field of study
A5	Students who have the learning skills to allow them to continue to study in a manner that may be largely self-directed or autonomous.
B3	The students will be able to deepen in the main oceanographic processes and their spatiotemporal scales
B4	The students will be able to analyse oceanographic databases and obtain skills for their treatment.
C2	The students will be able to schedule, design and execute original applied investigations from the stage of recognition until the evaluation of results and discoveries.
C5	The students will be able to draft scientific articles and present their results with clarity, using solid arguments in the development of their conclusions
C7	The students will obtain knowledge that will allow them reinforce and deepen in the physical mechanisms that control the atmosphere-ocean interactions, the climatic variability, as well as the validity and contrast of climatic models.
D1	The students will know and will be able to apply the scientific method in the academic and research fields.
D2	The students will possess the handle skills in the laboratory that allow them to develop autonomous work.
D3	The students will be able to communicate the obtained information and their conclusions in a effective way to the general public, to other scientists and to the competent authorities, listening and answering of effective form and, using an appropriate language to the audience and to the context
D4	The students will be able to understand the need and obligation to perform a continuous training, to a large extent autonomous, for the scientific development, updating the knowledges, skills and attitudes of the professional competences along the life.

Expected results from this subject

Expected results from this subject	Training and Learning Results

AIR1. Knowledge of processes related to the processes of interaction between the atmosphere and the ocean	A1 A2 A5 B3 B4 C2 C7 D1 D2 D4
RA3. Develop the capacity to expose the results obtained or the knowledge purchased to a skilled public.	C5 D3

Contents	
Topic	
Introduction	Atmosphere influence on ocean Ocean influence on atmosphere Atmosphere and ocean as an integrated system
Previous concepts	Equation of movement of a geophysical fluid Latent Heat Specific Heat Transfer of Heat Density Comparison between atmospheric and oceanic properties
Hurricanes	Definition Physical structure Mechanics Process of training Places and main regions of training Movement and route
Current of the Gulf	Introduction The circulation of dump meridional The circulation of dump meridional of the Atlantic Common of the Gulf
ENSO	Introduction Definition History The south swing The climatic Variable Boy Index Projections
Oceanic evaporation and precipitation	Oceanic evaporation Global Distribution of water steam. Flow of water steam and his divergence Changes in sea water salinity. Transport of water steam to big distance, sources and sinks. Global of humidity Extreme Events: the oceans role on the jet modulation at low levels Atmospheric rivers, implications of climate change
Monsoons	Different warming in earth and ocean Geographic Distribution Diets of winds Extreme rains

Methodologies	
	Description
Lecturing	The teacher explains the main theoretical aspects of the subject in class by means of Powerpoint or similar.
Problem solving	Seminars during which students solve practical activities supervised by the teacher. They are activities developed to improve the significant construction of the knowledge through the interaction between students. The function of the teacher is to present the aims, supervise and to realize the follow-up of the same.
Presentation	Individual or group oral session of a subject from the course.
Seminars	Significant construction of the knowledge through the interaction between the teacher and the student by means of tutorials to orient and solve doubts.

Personalized assistance	
Methodologies	**Description**
Problem solving	During the resolution of practical cases and in the tutorial classes, the attention to the student will be customized with the aim to resolve any type of doubt so much theoretical like practice. Tutorial classes will be virtual through the Campus Remoto by appointment
Seminars	During the resolution of practical cases and tutorials the attention to the student will be able to be customized with the aim to resolve any type of doubt so much theoretical like practice. Tutorials: Monday from16:00 to 18:00 and Wednesday from 9:00 to 11:00

Assessment						
	Description	Qualification	Training and Learning Results			
Essay	Individual or group oral sesion of a subject from the course. The AR3 learning outcome will be assessed.	40	A1 A2 A5		C2 C5 C7	D1 D3
Problem and/or exercise solving	Questions on the subject topics, practical reports, practical exercises. AR2, and AR3 learning outcomes will be assessed.	40	A1 A2	B3 B4	C7	D2
Report of practices, practicum and external practices	Report	20	A2 A5	B4	C2 C7	D2 D4

Other comments on the Evaluation

"The preferred assessment method is Continuous Evaluation. Students who wish to opt for Global Evaluation (100% of the grade based on the official exam) must inform the course instructor, via email or through the Moovi platform, within a period not exceeding one month from the start of the course.

Attendance to lectures, especially problem-solving seminars, is mandatory.

Students who are unable to attend the sessions due to justified reasons must provide appropriate justification. Evaluation will be conducted through other alternative tests chosen by the professor(s).

All tests can be evaluated on the secondchance. Nonattendance to compulsory activities precludes the possibility to beevaluated in the second chance.

Exam Dates:

The exam dates can be viewed at: http://masteroceanografia.com/horarios/

Any changes to the officially approved exam dates will be posted on the notice board and the Center's website."

General description	The subject is focused to the study of the main processes of global change that affect to the biology of the ocean in different levels of organisation. For this *desglosa the results of observational and experimental studies directed to determine the effect of the global change on populations, communities and marine ecosystems, by means of masterclasses, practices of laboratory, resolution of practical cases and seminars.			

Training and Learning Results	
Code	
A1	Students who have demonstrated knowledge and understanding that is founded upon and extends and/or enhances that typically associated with the first cycle, and that provides a basis or opportunity for originality in developing and/or applying ideas, often within a research context
A2	Students who can apply their knowledge and understanding, and problem solving abilities in new or unfamiliar environments within broader (or multidisciplinary) contexts related to their field of study
A4	Students who can communicate their conclusions, and the knowledge and rationale underpinning these, to specialist and nonspecialist audiences clearly and unambiguously
A5	Students who have the learning skills to allow them to continue to study in a manner that may be largely self-directed or autonomous.
B1	The students will understand in a detailed and based form the theoretical and practical aspects and the work methodology of the oceanography
B2	The students will interpret the behaviour of the global oceanic system and their controlling factors.
B3	The students will be able to deepen in the main oceanographic processes and their spatiotemporal scales
B5	The students will be able to develop the sufficient autonomy to participate in research projects and scientific collaborations, especially in interdiscipinary contexts
C1	The students will be able to obtain advanced and relevant knowledge, of skilled and multidisciplinary character, in the field of the oceanography and their application to the marine environment
C3	The students will analyse situations and specific oceanographic conditions related with the global change
C4	The students will be able to apply in the practice the obtained knowledge and issue resolutions and judgments in the different oceanography fields
C7	The students will obtain knowledge that will allow them reinforce and deepen in the physical mechanisms that control the atmosphere-ocean interactions, the climatic variability, as well as the validity and contrast of climatic models.
D1	The students will know and will be able to apply the scientific method in the academic and research fields.
D2	The students will possess the handle skills in the laboratory that allow them to develop autonomous work.
D3	The students will be able to communicate the obtained information and their conclusions in a effective way to the general public, to other scientists and to the competent authorities, listening and answering of effective form and, using an appropriate language to the audience and to the context
D4	The students will be able to understand the need and obligation to perform a continuous training, to a large extent autonomous, for the scientific development, updating the knowledges, skills and attitudes of the professional competences along the life.

Expected results from this subject	
Expected results from this subject	Training and Learning Results

The students will learn the importance of the human effect on the biogeochemical processes to scale global and temporary scales, its repercussions for the marine environment and the sustainability of the ecosystems.	A1 A5 B3 B5 C7 D1 D4
The students will work their skills to express the ideas and knowledge about the topic by oral and written communications.	A2 A4 B2 B3 C3 C4 D3
The students will learn laboratory or field methodologies that will help them to interpret the results showed in the scientific publications related with the field of the Global Change	B1 C1 D2
New	A4 D3

Contents	
Topic	
SUBJECT 1.	Introduction and reflections to start with a course of global change. Ecological footprint and index of human development. Concept and aims of sustainable development.
SUBJECT 2.	Scales of natural variability and *antropogénica: Approximation by means of distinct temporary and space scales. Tendencies *interdecadales in primary production.
SUBJECT 3.	Multiple factors of stress: Temperature, stratification and nutrients. Interactive effects: experimental approximations and observations of field.
SUBJECT 4	Effect of the degradation of the layer of ozone and the increase of the radiation *UV on the marine ecosystems. The cycle of the ozone. Penetration of the radiation *UV in the half aquatic. Photodegradation and *fotoinhibición. Direct and indirect effects of the radiation *UV on the marine organisms.
SUBJECT 5.	Impact of the global change on the cycle of the carbon in the oceans. Oceanic acidification and coastal acidification. Effect of the increase of CO2 on the organisms and marine ecosystems. *Blue *Carbon: Capture and retention of CO2 in distinct marine ecosystems: marine meadows, *marismas, mangroves, and systems *planctónicos.
SUBJECT 6.	Impact of the global change on the biogeochemical cycles in the oceans. Eutrophication: coastal and atmospheric contributions. Massive proliferations of toxic phytoplankton.
SUBJECT 7.	Impact of the global change on the communities *planctónicas. Answers of the community in front of the global change. Changes in the diversity, distribution and abundance of functional groups key: bacteria, phytoplankton and *zooplancton.
SUBJECT 8.	Impact of the global change on the food webs *pelágicas. Changes in biomass of primary producers and consumers. Changes in the efficiency of transfer of the food webs.
SUBJECT 9.	Impact of the global change on the coastal ecosystems. Effects on the communities *bentónicas.

Planning			
	Class hours	Hours outside the classroom	Total hours

Methodologies

	Description
Lecturing	Exhibition by part of the professor of the concepts but notable of the matter.
Seminars	The communication of scientific works in international congresses
Problem solving	Resolution of a practical case: Impact of the global change in the Estuary of Vigo.
Laboratory practical	Mock experimentation in laboratory. 1) Determination of metabolic taxes: primary production *fitoplanctónica. Estimate of curves photosynthesis-*irradiancia. 2) Technical statistical *multivariantes: of the visualisation to the contrast of hypothesis
Seminars	They will make *tutorías in group to supervise the realisation of the work that has to present at the end of the subject in format poster and oral presentation. The students will have to show the advances made and argue his proposals and the ones of his mates under the supervision of the professor.
Presentation	It will make the exhibition of a work of review on some subject related with the subject, of similar way to the established for the scientific congresses. If the professor considers it timely can require to the student that deliver copy of the work written.

Personalized assistance

Methodologies	Description
Lecturing	The student that wish to be attended in a one-to-one tutorial will be scheduled between 13:00 and 15:00 h. The student shall previously contact the corresponding professor by email.
Seminars	The student that wish to be attended in a one-to-one tutorial will be scheduled between 13:00 and 15:00 h. The student shall previously contact the corresponding professor by email.
Problem solving	The student that wish to be attended in a one-to-one tutorial will be scheduled between 13:00 and 15:00 h. The student shall previously contact the corresponding professor by email.
Laboratory practical	The student that wish to be attended in a one-to-one tutorial will be scheduled between 13:00 and 15:00 h. The student shall previously contact the corresponding professor by email.
Seminars	In group.

Assessment

	Description	Qualification	Training and Learning Results			
Lecturing	They will value the knowledges with one tests examiner.	30	A1 A5	B3	C1	D4
Seminars	Presentation of oral communication (posters).	20	A2 A4	B2 B3 B5	C1 C4	D1 D3
Problem solving	Presentation of report with results of a practical case.	20			C1 C3 C4 C7	
Laboratory practical	They will value the knowledges with one tests examiner.	10	A1		C1 C4	D2
Presentation	Preparation and presentation of a scientific work related with the subject. The follow-up of the work will do by means of *tutorías in group and the evaluation will make in base to the contribution and implication of the students during the *tutorías in group, the quality of the work written and the oral presentation of the same.	20	A5	B2 B3	C1 C3	D1 D3

Other comments on the Evaluation

The evaluation of the theoretical knowledges (masterclasses) and practical (practices of laboratory) will be able to carry out in an only examination. In all the methodologies *evaluables it is necessary to obtain a minimum note of 5/10 to be able to surpass the subject. The date of the examinations will publish in http://masteroceanografia.com/horarios/All the proofs will be able to recover in the second
opportunity.&*nbsp;Requires of the students that *curse this matter a responsible and honest behaviour. It considers inadmissible any form of fraud (copy or plagiarism) directed to *falsear the level of knowledges and skills reached in all type of proof, report or work. The fraudulent behaviours will be able to suppose suspend the subject during a complete course. It will carry an internal register of these performances so that, in case of *reincidencia, request the opening to the rectorship of a disciplinary file.

Web	http://masteroceanografia.com/			
General description	The subject "Design and realisation of oceanographic campaigns" will give from the 4 areas of knowledge, where each one they contributes his own methodology. The high cost of the Oceanographic Research does that the oceanographic campaigns have to be necessarily interdisciplinaries, and his design and execution has to realise from the perspective of the optimisation of the available resources. The subject includes the realisation of an oceanographic campaign, whose length will depend on the budgetary availability and of oceanographic ships. It considers a minimum time of ship of 2 days by student to be able to assimilate the distinct methodologies of sampling, taking of data and usual instrumental techniques in Oceanography. This subject will give with annual character, so that it allow a flexible design in function of the availability of oceanographic vessels. Inside his planning considered the possibility that the students can ship in other campaigns of opportunity that realise researchers and that they can offer available squares for teaching.			

Training and Learning Results	
Code	
A3	Students who have the ability to integrate knowledge and handle complexity, and formulate judgments with incomplete or limited information, but that include reflecting on social and ethical responsibilities linked to the application of their knowledge and judgments
A5	Students who have the learning skills to allow them to continue to study in a manner that may be largely self-directed or autonomous.
B1	The students will understand in a detailed and based form the theoretical and practical aspects and the work methodology of the oceanography
B4	The students will be able to analyse oceanographic databases and obtain skills for their treatment.
C2	The students will be able to schedule, design and execute original applied investigations from the stage of recognition until the evaluation of results and discoveries.
C4	The students will be able to apply in the practice the obtained knowledge and issue resolutions and judgments in the different oceanography fields
D2	The students will possess the handle skills in the laboratory that allow them to develop autonomous work.
D4	The students will be able to understand the need and obligation to perform a continuous training, to a large extent autonomous, for the scientific development, updating the knowledges, skills and attitudes of the professional competences along the life.

Expected results from this subject	
Expected results from this subject	Training and Learning Results
Realise a complete route by the methodology of the oceanographic discipline, from the planning of the campaign, the obtaining of data in situ on board of the Oceanographic Vessel going through the learning of the treatment and presentation of the oceanographic results.	A3 A5 B1 B4 C2 C4 D2 D4

Contents	
Topic	
Design of the oceanographic campaign.	Adjusting the aims to the technical characteristic of the Oceanographic Vessel (O.V.) Configuration of the O.V. to reach the aims. Calculation of time in traffics and in stations.
Execution of the oceanographic campaign.	Management of the human resources. Management of the technical equipments. Management of the time.
Broadcast of reports of oceanographic campaigns.	Structure. Contents. Incidents.
Handling oceanographic equipment of data acquisition	Direct: samplings in the water column and in the bottom. Indirect: in the water column and in the bottom.
Treatment of oceanographic data.	Handling of acquisition software and of oceanographic data.

Planning	Class hours	Hours outside the classroom	Total hours
Lecturing	5	7.5	12.5
Laboratory practical	15	18.75	33.75
Studies excursion	25	37.5	62.5
Presentation	3	10.75	13.75
Seminars	2	0.5	2.5
*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.			

Methodologies	Description
Lecturing	The basic concepts related to the design and realization of oceanographic campaigns will be presented by the professor.
Laboratory practical	The students will become familiar with the laboratory techniques for the preparation of the samples collected in the oceanographic campaign before their analysis, with the use of oceanographic data acquisition and treatment software. Attendance is compulsory.
Studies excursion	A campaign will be made on board an Oceanographic Vessel to become familiar with the use of the different data acquisition equipment both in the water column and in the substrate. Attendance is compulsory.
Presentation	With the information collected in the campaigne at a Oceanographic vessel, the students will have to make the report of the campaign and expose it in the class.
Seminars	There will be tutorials in small groups where students can ask questions and answer questions.

Personalized assistance	
Methodologies	**Description**
Lecturing	The students will be personally attended during the development of the master sessions as well as during the individual tutorials enabled for this purpose.
Laboratory practical	The students will be personally attended during the development of laboratory practices as well as during the individual tutorials enabled for this purpose.
Studies excursion	The students will be personally assisted during the development of field trips as well as during the individual tutorials enabled for this purpose.
Presentation	The students will be personally attended during the development of the presentations / exhibitions as well as during the individual tutorials enabled for that purpose.
Seminars	The students will be personally attended during the development of the group tutorials as well as during the individual tutorials enabled for that purpose.

Assessment	Description	Qualification	Training and Learning Results			
Laboratory practical	Will be evaluated the attitude and the use of the activities realised in the laboratory and in the use of specific software.	20	A3	B1 B4	C2	D2
Studies excursion	Will be evaluated so much the quality of the report of campaign like the attitude during unroll it of the same.	40	A3 A5	B1 B4	C2 C4	D2 D4
Presentation	Will be evaluated the structure, content, clarity of the exhibition and organisation of the time during presentation.	40	A5	B4		D4

Other comments on the Evaluation

The date, time and place of the evaluation tests will be published on the master's official website.

https://masteroceanografia.com/horarios/

All tests can be evaluated on the second chance. Nonattendance to compulsory activities precludes the possibility to be
evaluated in the second chance, as well as the continuous evaluation.
Students who study this subject are responsible and honest behavior. Any form of fraud (copying,
or plagiarism) aimed at distorting the level of knowledge and skills reached in any type of test,
report or work will be considered inadmissible. Fraudulent behaviors may involve suspending the
subject during a full course. An internal record of these actions will be kept so that, in the case of
recidivism, request the opening of a disciplinary file to the Rectorate.

Coordinator	Nieto Palmeiro, Óscar			
Lecturers	Nieto Palmeiro, Óscar			
E-mail	palmeiro@uvigo.es			
Web	http://masteroceanografia.com/trabajo-fin-de-master/			
General description	It will consist in a work of investigation in the field of the Oceanography, in which sinteticen and integrate the competitions purchased in the educations.			

Training and Learning Results	
Code	
A1	Students who have demonstrated knowledge and understanding that is founded upon and extends and/or enhances that typically associated with the first cycle, and that provides a basis or opportunity for originality in developing and/or applying ideas, often within a research context
A2	Students who can apply their knowledge and understanding, and problem solving abilities in new or unfamiliar environments within broader (or multidisciplinary) contexts related to their field of study
A3	Students who have the ability to integrate knowledge and handle complexity, and formulate judgments with incomplete or limited information, but that include reflecting on social and ethical responsibilities linked to the application of their knowledge and judgments
A4	Students who can communicate their conclusions, and the knowledge and rationale underpinning these, to specialist and nonspecialist audiences clearly and unambiguously
A5	Students who have the learning skills to allow them to continue to study in a manner that may be largely self-directed or autonomous.
B1	The students will understand in a detailed and based form the theoretical and practical aspects and the work methodology of the oceanography
B2	The students will interpret the behaviour of the global oceanic system and their controlling factors.
B3	The students will be able to deepen in the main oceanographic processes and their spatiotemporal scales
B4	The students will be able to analyse oceanographic databases and obtain skills for their treatment.
B5	The students will be able to develop the sufficient autonomy to participate in research projects and scientific collaborations, especially in interdiscipinary contexts
C1	The students will be able to obtain advanced and relevant knowledge, of skilled and multidisciplinary character, in the field of the oceanography and their application to the marine environment
C2	The students will be able to schedule, design and execute original applied investigations from the stage of recognition until the evaluation of results and discoveries.
C3	The students will analyse situations and specific oceanographic conditions related with the global change
C4	The students will be able to apply in the practice the obtained knowledge and issue resolutions and judgments in the different oceanography fields
C5	The students will be able to draft scientific articles and present their results with clarity, using solid arguments in the development of their conclusions
D1	The students will know and will be able to apply the scientific method in the academic and research fields.
D2	The students will possess the handle skills in the laboratory that allow them to develop autonomous work.
D3	The students will be able to communicate the obtained information and their conclusions in a effective way to the general public, to other scientists and to the competent authorities, listening and answering of effective form and, using an appropriate language to the audience and to the context
D4	The students will be able to understand the need and obligation to perform a continuous training, to a large extent autonomous, for the scientific development, updating the knowledges, skills and attitudes of the professional competences along the life.

Expected results from this subject	
Expected results from this subject	Training and Learning Results

Endow to the students of the competences, knowledges, skills and tools, in order to qualify them, from a technical-scientific point of view, for the realisation, presentation and defence of a research work.	A1 A2 A3	B1 B2 B3	C1 C2 C3	D1 D2 D3
This work will facilitate that the student have a taking of direct contact with the instrumentation, methodological techniques and methods for interpretation of data used in scientific-technical studies in the ocean. Likewise, it will give him the opportunity to work in a consolidated group of research. Hence, they are initiating their scientific work in an individual way and/or in a group.	A4 A5	B4 B5	C4 C5	D4

Contents

Topic	
The student will be able to make the Work End of Máster in the following big areas:	- Biological oceanography - Physical Oceanography - Chemical Oceanography - Geological Oceanography - Other disciplines related with the half marine and that are inside the contents given in the máster.
The lines of investigation or thematic fields offered are the following:	- Marine geology - Coastal Geology - Carbon dioxide, global Change and temporary series - chemical Processes of metals traces with ligandos organic. - Global changes in the oceanographic chemistry and biogeochemical cycles. - Ecology and physiology planctónica. - Oceanography Pesquera - Effects of global changes in the biological oceanography. - Global changes in the circulation to wide, meso- and sub-meso scale. - Fronts, twists and systems of afloramentos. - Hydrodynamic modelling. - Biology larvaria of marine invertebrates. - Effects of physical processes and chemists in the cycles bioxeoquímicos and answer of the biological communities. - Analysis sedimentario,micropaleontolóxico and isotopic of oceanic polls. - Ecology bentónica. - Analysis of oceanographic temporary series. - Resulted of oceanographic Campaigns. - Marine geochemistry. - Ways of climatic variability. - Interaction ocean-atmosphere. - Modelling of the ocean. - Climatic change in the ocean. - Energy in half marine (aeolian, maremotriz, currents). - Identification in analysis of registers paleoclimáticos. - Dynamic of gases invernadero in the coastal systems. - Diagénesis Of the organic matter and flows bentónicos. - Influence of the activity antrópica on the biogeochemical processes in the coastal systems. - Recent tectonic activity in coastal zones. - Stratigraphy of coastal zones and his relation with the changes of the level of the mar. - Geomorfología of continental margins. - Biological oceanography: Biology and Ecology of the Plankton. - Ecophysiology of macroalgas and ficología applied. - Microbial and biogeochemical ecology of the interfase waters-sediment. - Hydrodynamic modelling in coastal zones. - Operational oceanography in coastal zones. - Applications of the teledetection to the coastal oceanography.

Planning

	Class hours	Hours outside the classroom	Total hours
Mentored work	0.25	354.5	354.75
Presentation	0.25	20	20.25

*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies

	Description

Mentored work	Significant construction of knowledge through the interaction between the tutor and the student by means of tutorial sessions which can be personalised or carried out in very reducedin groups. In these season, the professor orients and resolves doubts.
Presentation	It consists in obtaining the keys for the preparation of the presentation of the work at the end of the master course.

Personalized assistance

Methodologies	Description
Mentored work	The tutors and the works will be offered and assigned to beginning of the master course. The student will have to enter into appointments with his tutor when was required, in order to go advancing in the development of the work.

Assessment

	Description	Qualification	Training and Learning Results			
Mentored work	The scientific content and written presentation of the Master's thesis will be assessed by a evaluating committee appointed for this purpose, in accordance with a rubric published on the Master's website.	60	A1 A2 A3 A4 A5	B1 B2 B3 B4 B5	C1 C2 C3 C4 C5	D1 D2 D3 D4
Presentation	The presentation of a scientific paper and the answers, according to a rubric published on the Master's website, will be assessed by a evaluating committee appointed for this purpose.	40	A1 A2 A3 A4 A5	B1 B2 B3 B4 B5	C1 C2 C3 C4 C5	D1 D2 D3 D4

Other comments on the Evaluation

There will be two ordinary announcements to proceed to the defense of the master's degree dissertation, one in June and another in July. In addition, there will be an extraordinary call in the month of December. The rules, the calendar of procedures, the evaluation guidelines, and another relevante information will be published in the virtual teaching platform *Moovi*, as well as in the following link http://masteroceanografia.com/trabajo-fin-de-master/.
Students are strongly requested to fulfil a honest and responsible behaviour.
It is considered completely unacceptable any alteration or fraud (i.e., copy or plagiarism) contributing to modify the level of knowledge and abilities acquired in exams, evaluations, reports or any kind of teacher□s proposed work. Fraudulent behaviour may cause failing the course for a whole academic year. An internal dossier of these activities will be built and, when reoffending, the university rectorate will be asked to open a disciplinary recor. To control this aspect, students will personally submit their work to the Turnitin anti-plagiarism application, which will be enabled on the Moovi platform.

*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies	Description
Introductory activities	Brief presentation of the educational guide and of the development of the subject.
Lecturing	Exhibition of contents by part of the professor, analysis of competitions, explanation and demonstration of capacities, skills and knowledges in the classroom, using like methodology the participatory masterclass and in which the function of the professor is to explain the theoretical foundations of the matter.
Laboratory practical	Significant construction of the knowledge through the interaction the activity of the student. They are activities developed in spaces and with skilled equipment that improve the significant construction of the knowledge through the interaction and activity of the student. They realise in the laboratory and the function of the professor is to present the aims, orient the work and realise the follow-up of the same.
Seminars	Significant construction of the knowledge through a skilled meeting, of technical or academic nature, that tries to develop a deep study on the matter in question. The significant construction of the knowledge is active, since the students have to look for and elaborate the information in the frame of a reciprocal collaboration between himself and from the interaction with the professor.

Personalized assistance	
Methodologies	**Description**
Introductory activities	The student who wishes it will be able to attend personalized tutorials to solve doubts, mainly in the schedules indicated. To optimize the time, it is necessary for the student to contact the teacher well in advance. These tutorials can be done in person in the offices of the teachers or through the virtual offices that the teachers have in campusremotouvigo.gal. Likewise, any doubts that arise to the student can be formulated through the forums that are enabled for this on the Moovi platform.

Assessment

	Description	Qualification	Training and Learning Results		
Essay questions exam	The student will have to answer in a succinct way to some questions in which it will evaluate the capacity to comprise and relate the concepts learnt during the subject.	40	A1 A5	B1	D1 D4
Report of practices, practicum and external practices	The students in group will present a memory of the work of practices realised in the laboratory and will be evaluated of agreement to some criteria that will be published as a rubric in the platform Moovi.	30	A1 A5	B1	
Essay	The students in group will present a memory of the work realised in the sessions of seminars and will be evaluated of agreement to some criteria that will be published as a rubric in the platform Moovi.	30	A1 A5	B1	D1 D4

Other comments on the Evaluation

The official dates for the evaluation tests can be found at the following links:

http://masteroceanografia.com/horarios/

Exámenes - Facultade de Ciencias do Mar (uvigo.es)

In order to surpass the whole subject, all and each one of the parts that compose the subject have to be surpassed with a minimum qualification of 5 points.

In case that any of the proofs of short answer and the resolution and of problems and/or exercises do not reach the minimum note, will repeat the examination in the second announcement.
In the case that it do not reach the minimum note in "Reports/memories of practice" and/or the "Jobs and projects", it will present again the work in the term that the professor estimate timely.

Overall evaluation option. The application for this evaluation option will have to be submitted in the time and form determined by the Center, which will be published before the beginning of the academic year. Given the experimental nature of the practices, attendance is mandatory to qualify for this evaluation option. **Failure to attend the internship, without justified cause, invalidates thispossibility, as well as the opportunity for extraordinary evaluation (2nd opportunity).**

General description	The subject tackles the study of communities, food webs and the main oceanographic processes that take place in the ocean. We will present basic notions on the cycle of the organic matter in the marine environment. We will do special emphasis on microbial plankton communities, as they play a predominant role in marine biogeochemical cycles. The fundamental aim is to acquire basic knowledge on the communities of organisms, their interactions and the oceanographic processes in order to understand the role of the biology of the ocean in the Earth system functioning.			

Training and Learning Results	
Code	
A1	Students who have demonstrated knowledge and understanding that is founded upon and extends and/or enhances that typically associated with the first cycle, and that provides a basis or opportunity for originality in developing and/or applying ideas, often within a research context
A5	Students who have the learning skills to allow them to continue to study in a manner that may be largely self-directed or autonomous.
B1	The students will understand in a detailed and based form the theoretical and practical aspects and the work methodology of the oceanography
D1	The students will know and will be able to apply the scientific method in the academic and research fields.
D2	The students will possess the handle skills in the laboratory that allow them to develop autonomous work.

Expected results from this subject	Training and Learning Results
Students will be able to use the terminology and concepts related with the biological oceanography scientific field	A1 B1
Students will be able to apply the scientific methodology and the basic technics related with the biological oceanography research field	A1 A5 B1 D1 D2
Students will be able to analyse and explain the relationship between the organisms and the environmental factors	A1 B1
Students will recognize the diversity and function of the main planktonic and benthonic marine groups	A1 B1
Students will be able to comprehensively describe the processes of circulation of the organic matter in the marine environment	A1 B1
Students will be able to evaluate, formulate, and resolve problems related with the oceanography	B1 D1
Students will be able to demonstrate advanced oral and written communication skills	D1

Contents	
Topic	
Lesson 1. The marine environment.	Classification of marine environments and organisms. Abiotic conditions: solar radiation, temperature, salinity, density, pressure. Oceanic circulation.
Lesson 2. Phytoplankton and primary production.	Main groups of phytoplankton. Photosynthesis and primary production. Factors that control primary production. Spatial and temporal variability.

Lesson 3. Microbial plankton: decomposition of organic matter.	Bacteria, archea, virus and heterotrophic protists. Biomass, production and bacterial growth efficiency. Factors that control the bacterial growth: resources versus predation.
Lesson 4. Zooplankton and pelagic food webs.	Main groups of zooplankton. Transfer of energy and trophic chains. Types of pelagic food webs.
Lesson 5. Benthonic Organisms.	Main groups of benthonic plants and animals. Factors that determine the structure of benthonic communities.
Lesson 6. Benthonic communities.	Benthonic communities of shallow rocky and sandy environments. Benthonic communities of deep systems.
Lesson 7. Human impact on the marine environment.	Overexploitation. Invasive species. Destruction and alteration of habitats. Climate change.

Planning

	Class hours	Hours outside the classroom	Total hours

Code	
A1	Students who have demonstrated knowledge and understanding that is founded upon and extends and/or enhances that typically associated with the first cycle, and that provides a basis or opportunity for originality in developing and/or applying ideas, often within a research context
A5	Students who have the learning skills to allow them to continue to study in a manner that may be largely self-directed or autonomous.
B1	The students will understand in a detailed and based form the theoretical and practical aspects and the work methodology of the oceanography
D1	The students will know and will be able to apply the scientific method in the academic and research fields.
D4	The students will be able to understand the need and obligation to perform a continuous training, to a large extent autonomous, for the scientific development, updating the knowledges, skills and attitudes of the professional competences along the life.

Expected results from this subject	Training and Learning Results
Purchase basic knowledges to understand the internal and external geological cycles in the frame of the Plate Tectonic.	A1 B1 D1
Capacity to take consciousness of the different scales space-temporary in which the geological processes operate in the field of the geological oceanography.	A1 A5 B1 D4
Understand the importance for the human being of the geological processes and products in the field of the marine geology.	A5 B1 D1 D4

Contents	
Topic	
The System Tierra	The Earth like dynamic system. Fundamental principles of the geology and concept of geological time. The geological cycle. Sources of energy of the internal system and of the external system. Scale space-temporary of the terrestrial processes.

Introduction to the Tectonics of Plates.	It derives it continental and the oceanic expansion. Active continental margins and passive. Edges of plate: convergent, divergent and *transcurrentes. The cycle of Wilson. Tectonics and climate: *ciclicidad of the processes in the geological register
Basic concepts of sedimentology	Fundamental principles. Structures *sedimentarias. *Facies And analysis of *facies
Coastal and marine sedimentary environments	Processes and products. Sedimentary Environments.
Seismic surveys at sea	- The seismic method - Seismic interpretation
Practical subjects	1. Introduction to the map and geological cut 2. Basic technicians in sedimentology

Planning

	Class hours	Hours outside the classroom	Total hours
Lecturing	18	31.5	49.5
Laboratory practical	9	11.25	20.25
Seminars	3	2.25	5.25

*The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies

	Description
Lecturing	The main concepts of each topic will be explained by the teacher and the students will be involved by asking questions. Attendance and active participation in the sessions will be valued.
Laboratory practical	Resolution of maps and simple geological sections. Use of basic techniques in sedimentology. Recognition of visu of the main groups of rocks. Given their experimental nature, attendance at them is MANDATORY.
Seminars	The students will present in small groups doubts that will be solved by the teacher and the rest of the students of the group.

Personalized assistance

Methodologies	Description
Lecturing	The students can be personally assisted both in the development of the lectures and in the hours of individual tutoring reserved for that purpose.
Laboratory practical	The students can be personally attended both in the development of laboratory practices and in the hours of individual tutoring reserved for that purpose.
Seminars	Students can be personally attended both in the development of group tutoring and in the individual tutoring hours reserved for this purpose.

Assessment

	Description	Qualification	Training and Learning Results		
Lecturing	It will be evaluated in 2 blocks: 20%, attendance at the sessions and active participation in them. 40%, evaluation of the knowledge acquired through a written test.	60	A1 A5	B1	D1 D4
Laboratory practical	For each one of the practices the students will have to present a memory that will be evaluated. Attendance is mandatory, given its experimental nature.	40	A5	B1	D4

Other comments on the Evaluation

Global assessment option

The application for this evaluation option must be submitted in the time and manner determined by the Center,

which will be published prior to the academic start.

Given the experimental nature of the internships, attendance at them is mandatory to be eligible for this evaluation option.

Failure to attend the practices, without just cause invalidates this possibility, as well as the opportunity for extraordinary evaluation (2nd opportunity).

Extraordinary evaluation (2nd chance)

Global exam in which 60% will correspond to the theoretical contents and 40% of the practical ones.

Other considerations

The oficial dates of evaluation tests will be available at:
http://masteroceanografia.com/horarios/

Students who study this subject are responsible and honest behavior. Any form of fraud (copy or plagiarism) aimed at distorting the level of knowledge and skills reached in any type of test, report or work will be considered inadmissible. Fraudulent behaviors may involve suspending the subject during a full course. An internal record of these proceedings will be kept so that, in case of recidivism, request the opening of a disciplinary file to the Rectorate.

Recommendations

Other comments

Students willing so could attend personal tutorials to solve doubts and/or uncertainties. To better optimise the procedure, the student is requested to previously contact his/her teacher with reasonable anticipation. Students are strongly requested to fulfil a honest and responsible behaviour. It is considered completely unacceptable any alteration or fraud (i.e., copy or plagiarism) contributing to modify the level of knowledge and abilities acquired in exams, evaluations, reports or any kind of teacher□s proposed work. Fraudulent behaviour may cause failing the course for a whole academic year. An internal dossier of these activities will be built and, when reoffending, the university rectorate will be asked to open a disciplinary record.
